Absorption Spectra

Absolute intensities for the ultraviolet γ bands of NO, D. Weber and S. S. Penner—860

Absolute intensities of the 721 and 742 cm^{-1} bands of CO_2, Henry J. Kostkowski and Lewis D. Kaplan—1256

Absorption bands of rubidium in the presence of hydrocarbons, Shang-Yi Ch'en and Oleg Jefimenko—256

Absorption spectrum of Co in the vacuum ultraviolet region, Y. Tanaka, A. S. Jursa, and F. LeBlanc—862

Application of the molecular orbital method to the spectra of substituted aromatic hydrocarbons, Lionel Goodman, Ian G. Ross, and Harrison Shull—474

Assignment of the OH bending frequency in alcohols, P. Tarte and R. Deponthiere—962(L)

Bonding in copper(II) chelates: solvent effects in their visible absorption spectra, R. Linn Belford, M. Calvin, and Geneva Belford—1165

Calculation of dipole derivatives from infrared reflection spectra or Raman spectra of crystals, C. Haas and D. F. Hornig—707(L)

Calculation of energy levels for internal torsion and overall rotation. II. CH_3CHO type molecules; acetaldehyde spectra, R. W. Kilb, Chun Chia Lin, and E. B. Wilson, Jr.—1695

C—Cl stretching frequencies in relation to rational isomerism, San-ichiro Mizushima, Takehiko Shimanouchi, Kiyoshi Nakamura, Michiro Hayashi, and Soji Tsuchiya —970(L)

Correction for reflection, absorption, and scattering in photometric experiments; the extinction coefficient of gaseous chlorine at 4358 A, M. J. Dignam and D. J. Le Roy —964(L)

Coupling strength for resonance force transfer of electronic energy in Van der Waals solids, William T. Simpson and Don L. Peterson—588

Effect of hydrogen bonding on the near ultraviolet absorption of naphthol, S. Nagakura and M. Gouterman—881

Effects in the solid-state infrared spectrum of cyanuric acid, W. M. Padgett, II, J. M. Talbert, and W. F. Hammer—959(L)

Effects of high pressure on the near ultraviolet absorption spectra of benzene and monosubstituted benzenes, W. W. Robertson, S. E. Babb, Jr., and F. A. Matsen—367

Electronic spectra of cyclic aromatic hydrocarbon radicals and ions, H. C. Longuet-Higgins and K. Lenore McEwen—719

Electronic spectra of the triarylmethyl radicals, J. N. Murrell—1738

Electronic spectrum and dissociation energy of fluorine, A. L. G. Rees—1567

Flexibility of chemical bond as revealed by the rocking frequencies in ethylene, Takehiko Shimanouchi—594

Foreign gas pressure broadening of linear molecules, Kenneth L. Perkins, A. V. Bushkovitch, and L. J. Keiffer—779

Herzberg oxygen bands in "air" afterglows and the night airglow, Charles A. Barth and Joseph Kaplan—506

Infrared absorption spectra of urea, thiourea, and some thiourea-alkali halide complexes, James E. Stewart—248

Infrared and Raman spectra of fluorinated ethylenes. VII. 1,1-difluoro-2,2-dibromoethylene, Rose Theimer and J. Rud Nielsen—1374

Infrared and Raman spectra of *trans*-difluorodichloroethylene, D. E. Mann and Earle K. Plyler—773

Infrared and Raman spectra of vanadium oxytrichloride, Foil-A. Miller and Lauren R. Cousins—329

Infrared line and band strengths and dipole moment function in HCl and DCl, William S. Benedict, Robert Herman, Gordon E. Moore, and Shirleigh Silverman—1671

Infrared spectra and force constants of cyanoacetylene, George C. Turrell, Walter D. Jones, and Arthur Maki —1544

Infrared spectra of the alkali halides. I. Lithium halides, William Klemperer and Stuart A. Rice—618

Infrared spectra of HDO in water and ionic solutions, Robert D. Waldron—809

Infrared spectra of ketene and deuteroketenes, William F. Arendale and William H. Fletcher—793

Infrared spectra of some nitriloxides, S. Califano, R. Moccia, R. Scarpati, and G. Speroni—1777(L)

Infrared spectrum of carbonyl sulfide, Harry C. Allen, Jr., Earle K. Plyler, and L. R. Blaine—400

Infrared spectrum of dinitrogen tetroxide, Robert N. Wiener and Eugene R. Nixon—906

Infrared spectrum of hexadeuterobenzene-iodine solution, Eldon E. Ferguson—1357(L)

Infrared spectrum of N_2O_4, Robert G. Snyder and I. C. Hisatune—960(L)

Infrared spectrum of $N^{15}O_2$ and force constants of NO_2, Ralph E. Weston, Jr.—1248

Infrared spectrum of solid nitrous oxide, David A. Dows —745

Intensities of infrared bands in solution. I. Benzene solutions, Eldon E. Ferguson—1263

Interaction between sulfur dioxide and polar molecules. I. Systems containing aliphatic alcohols, ethers, or benzene in carbon tetrachloride, P. A. D. de Maine—1036

Interaction between sulfur dioxide and polar molecules. II. Systems containing ethanol and benzene or hydroquinone, P. A. D. de Maine—1042

Interaction between sulfur dioxide and polar molecules. III. The water-ethanol-sulfur dioxide and water-sulfur dioxide systems, P. A. D. de Maine—1049

Interpretation of absorption spectra of anions, Edward M. Kosower, Ronald L. Martin, and Villiers W. Meloche—1353(L)

Iodine complexes in inert solvents. II. Complexes of iodine with some aromatic ethers and biphenyl in carbon tetrachloride, P. A. D. de Maine—1189

Iodine complexes in inert solvents. III. Iodine complexes with methanol, ethanol, or diethyl ether in carbon tetrachloride, P. A. D. de Maine—1192

Light-scattering and color centers in sodium cyanide, Giovanni Isetti and Theodore J. Neubert—337

Matrix isolation studies: infrared spectra of intermediate species in the photolysis of hydrazoic acid, Edwin D. Becker, George C. Pimentel, and Mathias Van Thiel—145

Measurements of self-broadening in HCN, M. T. Pigott and D. H. Rank—384

Microwave determination of the structure of fluorobenzene, Børge Bak, Daniel Christensen, Lise Hansen-Nygaard, and Eileen Tannenbaum—134

Microwave determination of the structure of trifluorobutyne, Børge Bak, Daniel Christensen, Lise Hansen-Nygaard, and Eileen Tannenbaum—241

Microwave spectrum, dipole moment, and structure of difluorosilane, Victor W. Laurie—1359

Absorption Spectra (continued)

Microwave spectrum, structure, and dipole moment of *s-trans* acrolein, Roselin Wagner, J. Fine, J. W. Simmons, and J. H. Goldstein—634

Microwave spectrum and barrier to internal rotation in CH_3BF_2, Robert E. Naylor, Jr., and E. Bright Wilson, Jr.—1057

Microwave spectrum and structure of formic acid, R. G. Lerner, B. P. Dailey, and J. P. Friend—680

Microwave spectrum and structure of propionitrile, R. G. Lerner and B. P. Dailey—678

Microwave spectrum and structure of sulfuryl fluoride, David R. Lide, Jr., D. E. Mann, and R. M. Fristrom—734

Microwave spectrum of ethyl bromide, Roselin S. Wagner, B. P. Dailey, and N. Solimene—1593

Microwave spectrum of ethyl chloride, Roselin S. Wagner and B. P. Dailey—1588

Modifications of the Cs absorption spectrum due to interatomic interactions, Oleg Jefimenko and Shang-Yi Ch'en—913

ν_3 band of methane, Harry C. Allen, Jr., and Earle K. Plyler—972(L)

Optical spectra of hydrated ions of the transition metals, Owen G. Holmes and Donald S. McClure—1686

Pairing energies in the actinide series, J. S. Griffith and L. E. Orgel—988

Perpendicular bands of allene, K. Narahari Rao, A. H. Nielsen, and W. H. Fletcher—1572

π-electron structure of butadiene, R. Stephen Berry—1660

Potential constants of nitrous acid, Ann Palm—855

Pure rotational absorption spectra of the methyl halides in the spectral region 100–600μ, E. D. Palik and K. Narahari Rao—1401

Pure rotational spectra of the partially deuterated ammonias in the far infrared spectral region, E. D. Palik and Ely E. Bell—1093

Raman and infrared spectra of 2-thiabutane, Michiro Hayashi, Takehiko Shimanouchi, and San-ichiro Mizushima—608

Remarks on the theory of absorption spectra of symmetrical cyanine-dyes and polyenes, S. Olszewski—1205

Rotation-vibration spectra of methyl amine and its deuterium derivatives, Allan P. Gray and R. C. Lord—690

"Sensitive" methyl vibrational frequencies—their relation to electronegativity and the inductive effect, J. K. Wilmshurst—426(L)

Singlet-triplet absorption in biacetyl solutions, Leslie S. Forster—1761(L)

Spectra of some symmetric-top molecules in the one- to four-millimeter wave region, Charles A. Burrus and Walter Gordy—391

Spectra of the alkali halides. III. Electronic spectra of lithium chloride, lithium bromide, and lithium iodide, R. Stephen Berry and William Klemperer—724

Spectra of urea and thiourea in the 3 μ region, Richard M. Badger and Robert D. Waldron—255

Spectroscopic studies of rotational isomerism in fluorinated ethane. III. CF_2Cl-CF_2Cl and CF_2Br-CF_2Cl, R. E. Kagarise—380

Symmetries of electric fields about ions in solutions. Absorption and fluorescence spectra of europic chloride in water, methanol, and ethanol, Edward V. Sayre, Donald G. Miller, and Simon Freed—109

Theoretical study of the hyperfine structure in the inversion spectra of the deutero-ammonias, George F. Hadley—1482

Ultraviolet absorption of pyrazine vapor due to n-π transition, Mitsuo Ito, Ryoichi Shimada, Tsukasa Kuraishi, and Wataru Mizushima—1508

Ultraviolet absorption spectra and the chemical mechanism of CS_2-O_2 explosions, Albert L. Myerson, Francis R. Taylor, and Philip L. Hanst—1309

Vibrational intensities. VII. Ethane and ethane-d_6, Irene M. Nyquist, I. M. Mills, W. B. Person, and Bryce Crawford, Jr.—552

Vibrational spectra, potential constants, and calculated thermodynamic properties of *cis-* and *trans*-BrHC=CHBr, and *cis-* and *trans*-BrDC=CDBr, Jerome M. Dowling, P. G. Puranik, Arnold G. Meister, and Sidney I. Miller—233

Vibrational spectra and molecular structure of some halogenated methyl cyanides, Samuel C. Wait, Jr., and George J. Janz—1554

Vibrational spectra of hexafluorobutadiene-1,3, J. C. Albright and J. Rud Nielsen—370

Vibrational spectra of molecules and complex ions in crystals. IX. Boric acid, D. F. Hornig and R. C. Plumb—637

Vibrational spectra of normal and B^{10}-labeled methyl borate, R. R. Servoss and H. M. Clark—1179

Vibrational spectra of normal and isotopically labeled boric acid, R. R. Servoss and H. M. Clark—1175

Vibrational spectra of polyethylenes and related substances, J. Rud Nielsen and A. H. Woollett—1391

Vibrational spectrum and force constants of diboron tetrachloride, D. E. Mann and Lilla Fano—1665

Vibrational spectrum and structure of metal-cyanide complexes in the solid state. I. $KAg(CN)_2$, Llewellyn H. Jones—1578

Vibrational spectrum and structure of the tropylium ion, William G. Fateley, Basil Curnutte, and Ellis R. Lippincott—1471

Vibrational spectrum of borine carbonyl, George W. Bethke and M. Kent Wilson—1118

Vibrational spectrum of disilane, George W. Bethke and M. Kent Wilson—1107

Vibrational spectrum of *N*-methyl formamide, D. E. DeGraaf and G. B. B. M. Sutherland—716(L)

Infrared of

Acetaldehyde spectra, R. W. Kilb, Chun Chia Lin, and E. B. Wilson, Jr.—1695

Alcohols, P. Tarte and R. Deponthiere—962(L)

Allene, K. Narahari Rao, A. H. Nielsen, and W. H. Fletcher—1572

Benzene solutions, Eldon E. Ferguson—1263

Boric acid, D. F. Hornig and R. C. Plumb—637

Boric acid, R. R. Servoss and H. M. Clark—1175

Borine carbonyl, George W. Bethke and M. Kent Wilson—1118

C—Cl, San-ichiro Mizushima, Takehiko Shimanouchi, Kiyoshi Nakamura, Michiro Hayashi, and Soji Tsuchiya—970(L)

CO_2, Henry J. Kostkowski and Lewis D. Kaplan—1256

CF_2Cl-CF_2Cl and CF_2Br-CF_2Cl, R. E. Kagarise—380

Carbonyl sulfide, Harry C. Allen, Jr., Earle K. Plyler, and L. R. Blaine—400

Cis- and *trans*-BrHC=CHBr, *cis-* and *trans*-BrDC=CDBr, Jerome M. Dowling, P. G. Puranik, Arnold G. Meister, and Sidney I. Miller—233

Copper(II) chelates, R. Linn Belford, M. Calvin, and Geneva Belford—1165

Crystals, C. Haas and D. F. Hornig—707(L)

Cyanoacetylene, George C. Turrell, Walter D. Jones, and Arthur Maki—1544

Cyanuric acid, W. M. Padgett, II, J. M. Talbert, and W. F. Hammer—959(L)
Deuterated ammonias, E. D. Palik and Ely E. Bell—1093
Diboron tetrachloride, D. E. Mann and Lilla Fano—1665
Dinitrogen tetroxide, Robert N. Wiener and Eugene R. Nixon—906
Disilane, George W. Bethke and M. Kent Wilson—1107
Ethane and ethane-d_6, Irene M. Nyquist, I. M. Mills, W. B. Person, and Bryce Crawford, Jr.—552
Halogenated methyl cyanides, Samuel C. Wait, Jr., and George J. Janz—1554
Hexadeuterobenzene-iodine solution, Eldon E. Ferguson—1357(L)
Hexafluorobutadiene-1,3 [illegible]C. Albright and J. Rud Nielsen—370
Hydrazoic acid, Edwin D. Becker, George C. Pimentel, and Mathias Van Thiel—145
HCl and DCl, William S. Benedict, Robert Herman, Gordon E. Moore, and Shirleigh Silverman—1671
HCN, M. T. Pigott and D. H. Rank—384
HDO, Robert D. Waldron—809
$KAg(CN)_2$, Llewellyn H. Jones—1578
Ketene and deuteroketenes, William F. Arendale and William H. Fletcher—793
Lithium halides, William Klemperer and Stuart A. Rice—618
Methane, Harry C. Allen, Jr., and Earle K. Plyler—972(L)
Methyl, J. K. Wilmshurst—426(L)
Methyl amine and its deuterium derivatives, Allan P. Gray and R. C. Lord—690
Methyl borate, R. R. Servoss and H. M. Clark—1179
Methyl halides, E. D. Palik and K. Narahari Rao—1401
N_2O_4, Robert G. Snyder and I. C. Hisatune—960(L)
$N^{15}O_2$, Ralph E. Weston, Jr.—1248
N-methyl formamide, D. E. DeGraaf and G. B. B. M. Sutherland—716(L)
Nitriloxides, S. Califano, R. Moccia, R. Scarpati, and G. Speroni—1777(L)
Nitrous acid, Ann Palm—855
Nitrous oxide, David A. Dows—745
1,1-difluoro-2,2-dibromoethylene, Rose Theimer and J. Rud Nielsen—1374
Polyethylenes and related substances, J. Rud Nielsen and A. H. Woollett—1391
Sulfamic acid, sulfamate ion, A. M. Vuagnat and E. L. Wagner—77
Trans-difluorodichloroethylene, D. E. Mann and Earle K. Plyler—773
Tropylium ion, William G. Fateley, Basil Curnutte, and Ellis R. Lippincott—1471
2-thiabutane, Michiro Hayashi, Takehiko Shimanouchi, and San-ichiro Mizushima—608
Urea and thiourea, Richard M. Badger and Robert D. Waldron—255
Urea, thiourea, thiourea-alkali halide complexes, James E. Stewart—248
Vanadium oxytrichloride, Foil A. Miller and Lauren R. Cousins—329

Microwave of

CH_3BF_2, Robert E. Naylor, Jr., and E. Bright Wilson, Jr.—1057
Deutero-ammonias, George F. Hadley—1482
Difluorosilane, Victor W. Laurie—1359
Ethyl bromide, Roselin S. Wagner, B. P. Dailey, and N. Solimene—1593
Ethyl chloride, Roselin S. Wagner and B. P. Dailey—1588
Fluorobenzene, Børge Bak, Daniel Christensen, Lise Hansen-Nygaard, and Eileen Tannenbaum—134
Formic acid, R. G. Lerner, B. P. Dailey, and J. P. Friend—680
Propionitrile, R. G. Lerner and B. P. Dailey—678
s-trans acrolein, Roselin Wagner, J. Fine, J. W. Simmons, and J. H. Goldstein—634
Sulfuryl fluoride, David R. Lide, Jr., D. E. Mann, and R. M. Fristrom—734
Symmetric-top molecules, Charles A. Burrus and Walter Gordy—391
Trifluorobutyne, Børge Bak, Daniel Christensen, Lise Hansen-Nygaard, and Eileen Tannenbaum—241

Of Crystals

Boric acid, D. F. Hornig and R. C. Plumb—637
Boric acid, R. R. Servoss and H. M. Clark—1175
Borine carbonyl, George W. Bethke and M. Kent Wilson—1118
CF_2Cl-CF_2Cl and CF_2Br-CF_2Cl, R. E. Kagarise—380
Crystals, C. Haas and D. F. Hornig—707(L)
Cyanoacetylene, George C. Turrell, Walter D. Jones, and Arthur Maki—1544
Cyanuric acid, W. M. Padgett, II, J. M. Talbert, and W. F. Hammer—959(L)
Dinitrogen tetroxide, Robert N. Wiener and Eugene R. Nixon—906
Hexamethyl benzene, O. Schnepp and Donald S. McClure—83
$KAg(CN)_2$, Llewellyn H. Jones—1578
Nitrous oxide, David A. Dows—745
Sodium cyanide, Giovanni Isetti and Theodore J. Neubert—337
2-thiabutane, Michiro Hayashi, Takehiko Shimanouchi, and San-ichiro Mizushima—608
Urea and thiourea, Richard M. Badger and Robert D. Waldron—255
Urea, thiourea, thiourea-alkali halide complexes, James E. Stewart—248
Van der Waals solids, William T. Simpson and Don L. Peterson—588

Visible or Ultraviolet of

Aliphatic alcohols, ethers, or benzene in carbon tetrachloride, P. A. D. de Maine—1036
Anions, Edward M. Kosower, Ronald L. Martin, and Villiers W. Meloche—1353(L)
Aromatic hydrocarbons, Lionel Goodman, Ian G. Ross, and Harrison Shull—474
Benzene and monosubstituted benzenes, W. W. Robertson, S. E. Babb, Jr., and F. A. Matsen—367
Biacetyl solutions, Leslie S. Forster—1761(L)
Butadiene, R. Stephen Berry—1660
Co, Y. Tanaka, A. S. Jursa, and F. LeBlanc—862
Copper(II) chelates, R. Linn Belford, M. Calvin, and Geneva Belford—1165
Cs, Oleg Jefimenko and Shang-Yi Ch'en—913
CS_2-O_2 explosions, Albert L. Myerson, Francis R. Taylor, and Philip L. Hanst—1309
Cyanine-dyes and polyenes, S. Olszewski—1205
Ethanol and benzene or hydroquinone, P. A. D. de Maine—1042
Europic chloride in water, methanol, and ethanol, Edward V. Sayre, Donald G. Miller, and Simon Freed—109
Fluorine, A. L. G. Rees—1567
Hexamethyl benzene, O. Schnepp and Donald S. McClure—83
Hydrated ions of the transition metals, Owen G. Holmes and Donald S. McClure—1686
Hydrocarbon radicals and ions, H. C. Longuet-Higgins and K. Lenore McEwen—719
Iodine complexes with methanol, ethanol, or diethyl ether in carbon tetrachloride, P. A. D. de Maine—1192

Absorption Spectra (continued)
Iodine complexes with some aromatic ethers and biphenyl in carbon tetrachloride, P. A. D. de Maine—1189
Lithium chloride, lithium bromide, and lithium iodide, R. Stephen Berry and William Klemperer—724
Naphthol, S. Nagakura and M. Gouterman—881
NO, D. Weber and S. S. Penner—860
Oxygen, Charles A. Barth and Joseph Kaplan—506
Pyrazine vapor, Mitsuo Ito, Ryoichi Shimada, Tsukasa Kuraishi, and Wataru Mizushima—1508
Rubidium, Shang-Yi Ch'en and Oleg Jefimenko—256
Sodium cyanide, Giovanni Isetti and Theodore J. Neubert—337
Triarylmethyl radicals, J. N. Murrell—1738
Water-ethanol-sulfur dioxide and water-sulfur dioxide systems, P. A. D. de Maine—1049
Accommodation Coefficients
Adsorption (see **Surface Phenomena**)
Apparatus and Methods
Capillary cone method for determination of surface tension of solids, A. Skapski, R. Billups, and A. Rooney—1350(L)
New method of measuring diffusion coefficients of gases, A. A. Westenberg and R. E. Walker—1753(L)
Photoionization counter for determination of ionization potentials, Hajime Sakai, John W. Little, and K. Watanabe—1335(L)
Preparation and proton magnetic resonance studies of anhydrous ammonia, Richard A. Ogg, Jr., and James D. Ray—1515
Catalysis
Dislocations as "active sites" in heterogeneous catalysis, Leland E. Cratty, Jr., and Andrew V. Granato—96
Entropy of chemisorbed hydrogen, Tetsuo Takaishi and Akio Kobayashi—1542
Investigations on the reduction of silver sulfide and cuprous sulfide by hydrogen, Haruo Kobayashi and Carl Wagner—1609
Centrifugation
Chemical Reactions (see **Kinetics of Reactions**)
Conductance
Electrical conductivity measurements on cuprous halides, J. Bruce Wagner and Carl Wagner—1597
Electrical properties of phthalocyanines, P. E. Fielding and Felix Gutman—411
Investigations on cuprous sulfide, J. Bruce Wagner and Carl Wagner—1602
Ionic conductivity of calcium fluoride crystals, Roland W. Ure, Jr.—1363
Mechanism of conduction in Li-substituted transition metal oxides, R. R. Heikes and W. D. Johnston—582
Reinvestigation of reported ferromagnetism in $Li_xNi_{(1-x)}O$, T. P. Janusz, R. R. Heikes, and W. D. Johnston—973(L)
Crystal Growth
Fibrous growth of $NaClO_3$, Gerald W. Sears—1549
Crystalline State
Calculation of compressibilities of high polymers from the energy of interaction between chain groups, Werner Brandt—262
Calculation of the heat capacity of α quartz and vitreous silica from spectroscopic data, R. C. Lord and J. C. Morrow—230
Calculation of the surface energies of alkali halide crystals, F. van Zeggeren and G. C. Benson—1077
Capillary cone method for determination of surface tension of solids, A. Skapski, R. Billups, and A. Rooney—1350(L)
Coupling of optic and acoustic modes of vibration in crystals, Ernest Bauer—1440
Coupling strength for resonance force transfer of electronic energy in Van der Waals solids, William T. Simpson and Don L. Peterson—588
Cubic form of boron nitride, R. H. Wentorf, Jr.—956(L)
Dielectric constant of dipolar solids, J. J. O'Dwyer—878
Diffusion and exchange of zinc in crystalline zinc oxide, Etalo A. Secco and Walter J. Moore—942
Diffusion of nickel oxide, Moon Taik Shim and Walter J. Moore—802
Diffusion of radioactive magnesium in magnesium oxide crystals, Roland Lindner and Geoffrey D. Parfitt—182
Dimerization of solid group IIIB trihalides. III. Bromine, gallium, and indium quadrupole resonances in $GaBr_3$, GaI_3, $InBr_3$, and InI_3, R. G. Barnes, S. L. Segel, P. J. Bray, and P. A. Casabella—1345(L)
Dislocations as "active sites" in heterogeneous catalysis, Leland E. Cratty, Jr., and Andrew V. Granato—96
Effect of electric field on the phase transition of ammonium sulfate, Kan-Ichi Kamiyoshi—218(L)
Effect of irradiation on the low-temperature specific heat of graphite, W. DeSorbo and W. W. Tyler—244
Effect of surface condition on the fluorescence and surface photoconductivity of anthracene, F. R. Lipsett, D. M. J. Compton, and T. C. Waddington—1444
Effects in the solid-state infrared spectrum of cyanuric acid, W. N. Padgett, II, J. M. Talbert, and W. F. Hammer—959(L)
Elastic and force constants of a simple tetragonal crystal, G. B. Mitra and B. V. Gokhale—1655
Electrical conductivity measurements on cuprous halides, J. Bruce Wagner and Carl Wagner—1597
Electrical properties of phthalocyanines, P. E. Fielding and Felix Gutman—411
Electronic band structure in graphite, Masatoshi Yamazaki—930
Energy states and luminescent processes in the ZnF_2:Mn phosphor, Peter D. Johnson and Floyd L. Hughes—612
Evaporation of metal crystals, J. P. Hirth and G. M. Pound—1216
Fibrous growth of $NaClO_3$, Gerald W. Sears—1549
General relation between lattice sums, J. K. Mackenzie—1769(L)
Generalized equations for the ionization of solid particles, Harvey Einbinder—948
Interaction of rare gases with graphite, A. D. Crowell—1407
Investigations on cuprous selenide and copper tellurides, Gert Lorenz and Carl Wagner—1607
Investigations on cuprous sulfide, J. Bruce Wagner and Carl Wagner—1602
Ionic conductivity of calcium fluoride crystals, Roland W. Ure, Jr.—1363
Lattice dynamics of body-centered and face-centered cubic metallic elements. III. Cubic invariant polynomials, Jules de Launay—663
Lattice entropies—entropies of vaporization of ions from crystals, A. P. Altshuller—404
Light-scattering and color centers in sodium cyanide, Giovanni Isetti and Theodore J. Neubert—337
Madelung constants of some cubic crystals, G. C. Benson and F. van Zeggeren—1083
Magnetic dipole effects in ferrites, Richard A. Johnson and Daniel W. Healy, Jr.—1031
Magnetic susceptibility of neutron-damaged graphite, John E. Hove and J. D. McClelland—1028

New phase transition in HI, G. L. Hiebert and D. F. Hornig—1762(L)
Proton positions in $CuCl_2 \cdot 2H_2O$ by neutron diffraction, S. W. Peterson and Henri A. Levy—220(L)
Radii of transition ions in crystal fields, N. S. Hush and M. H. L. Pryce—143
Recognition and classification of semiconducting compounds with tetrahedral sp^3 bonds, E. Mooser and W. B. Pearson—893
Reinvestigation of reported ferromagnetism in $Li_xNi_{(1-x)}O$, T. P. Janusz, R. R. Heikes, and W. D. Johnston—973(L)
Relationship between atomic and ionic radii, G. R. Somayajulu and Santi R. Palit—807
Second-order decay of the thermoluminescence of polycrystalline materials, Peter K. Weyl—547
Self-diffusion in solid methane, J. S. Waugh—966(L)
Spectroscopic studies of rotational isomerism in fluorinated ethanes. III. CF_2Cl-CF_2Cl and CF_2Br-CF_2Cl, R. E. Kagarise—380
Study of the scintillation process, E. R. Hardwick and W. G. McMillan—1463
Susceptibility and Curie point of magnetically dilute crystals, Robert E. Behringer—1504
Theoretical investigation of vibrational frequency distributions for molecular crystals having the cyanogen iodide structure, Thomas H. Walnut—10
Thermoelectric behavior of solid particulate systems. Nickel oxide, G. Parravano and C. A. Domenicali—359
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. I. $KAg(CN)_2$, Llewellyn H. Jones—1578
Widmanstätten morphology, H. W. Paxton—1769(L)
Zeeman effect on the quadrupole spectra of sodium, potassium, and barium chlorates, Henry Zeldes and Ralph Livingston—1102
Zeeman effect on the quadrupole spectrum of iodic acid, Ralph Livingston and Henry Zeldes—351

Crystal Structure

Crystal and molecular structures of heterocyclic compounds. III. α-Phenazine near 80°K, F. L. Hirschfeld and G. M. J. Schmidt—923
Cubic form of boron nitride, R. H. Wentorf, Jr.—956(L)
Electric quadrupole interactions of deuterons and molecular motion in $Li_2SO_4 \cdot D_2O$, S. Ketudat and R. V. Pound—708(L)
Neutron diffraction study of calcium hydroxide, William R. Busing and Henri A. Levy—563
Nuclear magnetic resonance in guanidinium aluminum sulfate hexahydrate, David W. McCall—706(L)
Polynuclear metal carbonyls. I. Structures of $Mn_2(CO)_{10}$ and $Re_2(CO)_{10}$, Lawrence F. Dahl, Etsuro Ishishi, and R. E. Rundle—1750(L)
Polynuclear metal carbonyls. II. Structure of iron tetracarbonyl by x-ray diffraction, Lawrence F. Dahl and R. E. Rundle—1751(L)
Proton magnetic resonance of solid *sym*-tetrachloro and tetrabromoethane, M. Takeda and H. S. Gutowsky—577
Proton positions in $CuCl_2 \cdot 2H_2O$ by neutron diffraction, S. W. Peterson and Henri A. Levy—220(L)
Proton resonance in guanidine aluminum sulfate hexahydrate, R. D. Spence and John Muller—706(L)
X-ray diffraction study of the cubic phase of ice, F. V. Shallcross and G. B. Carpenter—782
Zeeman effect on the quadrupole spectra of sodium, potassium, and barium chlorates, Henry Zeldes and Ralph Livingston—1102

Detonation (see also **Shock Waves**)

Gaseous detonations in mixtures of cyanogen and oxygen, H. Milton Peek and R. G. Thrap—740
Ultraviolet absorption spectra and the chemical mechanism of CS_2-O_2 explosions, Albert L. Myerson, Francis R. Taylor, and Philip L. Hanst—1309

Deuterium (see **Isotopes**)

Dielectrics

Dielectric absorption and phase changes in an aliphatic ester in the waxy form, J. S. Dryden—604
Dielectric behavior of water at microwave frequencies, E. H. Grant, T. J. Buchanan, and H. F. Cook—156
Dielectric constant of dipolar solids, J. J. O'Dwyer—878
Dielectric saturation of associated liquids, John A. Schellman—1225
Effect of electric field on the phase transition of ammonium sulfate, Kan-Ichi Kamiyoshi—218(L)
Effect of pressure on dielectric properties and volume of 1-propanol and glycerol, A. Gilchrist, J. E. Earley, and R. H. Cole—196
Effects of atomic quadrupole moments upon the index of refraction, Robert A. Satten—766
Experiments on the polarization and decay of electrets, G. G. Wiseman and G. R. Feaster—521
Infrared dispersion of hydrogen bromide, Bertram Schurin and R. Rollefson—1089
Microwave dielectric measurements in liquid crystals, E. F. Carr—420
Multiple relaxation times in non-rigid solute molecules, Mansel Davies and R. J. Meakins—1584
Relationship between relaxation time and viscosity for water, E. H. Grant—1575

Diffusion

Comment on the significance of diffusion potentials in ion exchange kinetics, R. Schlögl and F. Helfferich—5
Diffusion and exchange of zinc in crystalline zinc oxide, Etalo A. Secco and Walter J. Moore—942
Diffusion and gas sorption rates obeying the Elovich equation, Thomas Freund—713(L)
Diffusion of nickel oxide, Moon Taik Shim and Walter J. Moore—802
Diffusion of radioactive magnesium in magnesium oxide crystals, Roland Lindner and Geoffrey D. Parfitt—182
Kinetic model for chromatographic dispersion and electrodiffusion, J. Calvin Giddings—1755(L)
New method of measuring diffusion coefficients of gases, A. A. Westenberg and R. E. Walker—1753(L)
Self-diffusion of silver in silver-palladium alloys, N. H. Nachtrieb, J. Petit, and J. Wehrenberg—106
Self-diffusion in solid methane, J. S. Waugh—966(L)
Surface diffusion of hydrogen on nickel, R. Wortman, R. Gomer, and R. Lundy—1334(L)

Dipole Moment

Calculation of energy levels for internal torsion and overall rotation. II. CH_3CHO type molecules; acetaldehyde spectra, R. W. Kilb, Chun Chia Lin, and E. B. Wilson, Jr.—1695
Dipole moment of lithium hydride, R. P. Hurst and F. A. Matsen—1092
Infrared dispersion of hydrogen bromide, Bertram Schurin and R. Rollefson—1089
Infrared line and band strengths and dipole moment function in HCl and DCl, William S. Benedict, Robert Herman, Gordon E. Moore, and Shirleigh Silverman—1671
Microwave spectrum, dipole moment, and structure of difluorosilane, Victor W. Laurie—1359
Microwave spectrum, structure, and dipole moment of *s*-trans acrolein, Roselin Wagner, J. Fine, J. W. Simmons, and J. H. Goldstein—634

Dipole Moment (continued)
Simple molecular orbital treatment of conjugation in chlorobenzene, John A. Howe and J. H. Goldstein—7
Study of the electronic ground state of the ammonia molecule, Harvey Kaplan—1704
Two-center dipole moment integrals in terms of C-functions, Walter C. Hamilton—1018

Elasticity
Electrochemistry
Electrolytic hydrogen evolution kinetics and its relation to the electronic and adsorptive properties of the metal, B. E. Conway and J. O'M. Bockris—532
Electroreduction of anions, A. N. Frumkin and N. V. Nikolajeva—1552
Investigations on the reduction of silver sulfide and cuprous sulfide by hydrogen, Haruo Kobayashi and Carl Wagner—1609
Electron Affinity
Electron Diffraction
Electron Microscopy
Field emission from mercury whiskers, Robert Gomer—1333(L)
Electrophoresis
Emission Spectra
Emission and two-body recombination in bromine, Howard B. Palmer—648
Emission band spectra of nitrogen. Kaplan's first and second systems, Alf Lofthus and Robert S. Mulliken—1010
Shock-excitation of atomic and molecular spectra, R. W. Nicholls and W. H. Parkinson—423(L)
Spin-orbital perturbation in cyanine dyes adsorbed on surfaces containing high-Z atoms, Enrico Clementi and Michael Kasha—956(L)
Energy Transfer
Coupling strength for resonance force transfer of electronic energy in Van der Waals solids, William T. Simpson and Don L. Peterson—588
Study of the scintillation process, E. R. Hardwick and W. G. McMillan—1463
Temperature dependence of energy transfer in diphenyl anthracene system, H. N. Bose and M. L. Bhaumik—1757(L)
Equation of State
Errata
Erratum: configuration of a polyelectrolyte chain in solution, Irvin M. Krieger—1756(L)
Erratum: indirect action of radiation on the $-NH-CH_3$ linkage in diethylamine (A mechanism for radiation-induced decomposition of the peptide chain), Michael E. Jayko and Warren M. Garrison—709(L)
Erratum: on the pressure estimation in impact sensitivity experiments on explosives and the problem of initiation, M. P. Murgai—959(L)
Erratum: overvoltages and passivity in melted electrolytes, R. Piontelli, G. Sternheim, and M. Francini—1756(L)
Erratum: standard electrode potential of the silver, silver chloride electrode, R. G. Bates, E. A. Guggenheim, H. S. Harned, D. J. G. Ives, G. J. Janz, C. B. Monk, J. E. Prue, R. A. Robinson, R. H. Stokes, and W. F. K. Wynne-Jones—222(L)
Erratum: work function and electrical conductivity of hydrogen-covered nickel films. The effect of contamination, W. M. H. Sachtler—709(L)

Faraday Effect
Films (see **Surface Phenomena**)

Flames
Burning-rate studies. A negative pressure exponent in the consumption-rate equation for a liquid system, A. Greenville Whittaker, Harry Williams, and Penniman M. Rust—717(L)
Generalized equations for the ionization of solid particles, Harvey Einbinder—948
Relaxation-time model for free-radical concentration, J. Calvin Giddings—1210
Spectroscopic survey of energy distributions of OH, C_2, and CH radicals in low pressure acetylene-oxygen flames, Herbert P. Broida and Donald F. Heath—223
Fluorescence
Effect of surface condition on the fluorescence and surface photoconductivity of anthracene, F. R. Lipsett, D. M. J. Compton, and T. C. Waddington—1444
Fluorescence efficiencies of organic compounds, Milton Furst, Hartmut Kallmann, and Felix H. Brown—1321
Infrared fluorescence of simple molecules, Sidney W. Benson and Gerald B. Porter—714(L)
Observation of the relative polarizations of electronic transitions, Richard Williams—1186
Role of collision transfer in fluorescent solutions, R. Hardwick—323
Symmetries of electric fields about ions in solutions. Absorption and fluorescence spectra of europic chloride in water, methanol, and ethanol, Edward V. Sayre, Donald G. Miller, and Simon Freed—109
Free Rotation (see **Rotational Isomerism**)

Gases
Distribution of electrons in the water molecule, K. E. Banyard and N. H. March—1416
Equations for a lattice gas. I. One-component systems, Howard B. Levine, Joseph E. Mayer, and Henry Aroeste—201
Foreign gas pressure broadening of linear molecules, Kenneth L. Perkins, A. V. Bushkovitch, and L. J. Keiffer—779
Heat conductivity in polyatomic or electronically excited gases. II, Joseph O. Hirschfelder—282
Heat transfer in chemically reacting mixtures. I, Joseph O. Hirschfelder—274
Intermolecular potentials for unlike interaction on exp-six model, K. P. Srivastava—579
Kinetic theory of non-spherical molecules. II, C. F. Curtiss and Charles Muckenfuss—1619
Lattice vacancy theory of the liquid state, Charles R. Mueller and Donald C. Stupegia—1522
New method of measuring diffusion coefficients of gases, A. A. Westenberg and R. E. Walker—1753(L)
Quantum-mechanical effects in gas dynamics, E. V. Laitone—1560
Retardation of a radiochemical reaction by charge transfer in a bimolecular mixture of gases, S. C. Lind and P. S. Rudolph—1768(L)
Scattering of low velocity molecular beams in gases, Edward A. Mason—667
Short-range intermolecular forces. II. H_2-H_2 and H_2-H, Edward Mason and Joseph O. Hirschfelder—756
Sound dispersion in halo-methane mixtures, Robert Amme and Sam Legvold—514
Third virial coefficient for intermolecular potentials with hard sphere cores, B. J. Alder and J. A. Pople—325
Glasses
Kinetics of slow fractures in glass, W. C. Levengood and W. H. Johnston—1184

Heat Capacity (see **Thermodynamic Properties**)
High Pressures
Hindered Rotation (see **Rotation**)

Infrared Spectra (see **Absorption Spectra**)
Intensities of Spectra
Absolute intensities for the ultraviolet γ bands of NO, D. Weber and S. S. Penner—860
Absolute intensities of the 721 and 742 cm^{-1} bands of CO_2, Henry J. Kostkowski and Lewis D. Kaplan—1256
Infrared line and band strengths and dipole moment function in HCl and DCl, William S. Benedict, Robert Herman, Gordon E. Moore, and Shirleigh Silverman—1671
Intensities of infrared bands in solution. I. Benzene solutions, Eldon E. Ferguson—1263
Vibrational intensities. VII. Ethane and ethane-d_6, Irene M. Nyquist, I. M. Mills, W. B. Person, and Bryce Crawford, Jr.—552
Isotopes
Concerning the separation of isotopes by surface diffusion in porous media, W. G. Trawick and A. S. Berman—709(L)
Integrated rate equations for isotopic exchange in simple reversible reactions, Robert A. Alberty and Wilmer G. Miller—1231
Photochemical separation of mercury isotopes. I. A study of the emission and absorption hyperfine lines of mercury at 2537 A, K. R. Osborn, C. C. McDonald, and H. E. Gunning—124
Preparation and proton magnetic resonance studies of anhydrous ammonia, Richard A. Ogg, Jr., and James D. Ray—1515
Preparation of pure mercury isotopes from natural mercury by mercury photosensitization, R. Pertel and H. E. Gunning—219(L)
Solubility of hydrogen and deuterium in nonpolar solvents, M. W. Cook, D. N. Hanson, and B. J. Alder—748
Theory of oxidation-reduction reactions involving electron transfer. II. Applications to data on the rates of isotopic exchange reactions, R. A. Marcus—867
Isotope Effects
Assignment of the OH bending frequency in alcohols, P. Tarte and R. Deponthiere—962(L)
Calculation of energy levels for internal torsion and overall rotation. II. CH_3CHO type molecules; acetaldehyde spectra, R. W. Kilb, Chun Chia Lin, and E. B. Wilson, Jr.—1695
C^{13}-isotope effect in the photolysis of ethyl bromide, H. L. Friedman, R. B. Bernstein, and H. E. Gunning—528
Carbon isotope effect during oxidation of carbon monoxide with nitrogen dioxide, Harold S. Johnston, William A. Bonner, and David J. Wilson—1002
Concerning the separation of isotopes by surface diffusion in porous media, W. G. Trawick and A. S. Berman—709(L)
Effect of pressure on the isotope effect in a unimolecular gaseous reaction: tritium and carbon-13 effects in the isomerization of cyclopropane, Ralph E. Weston, Jr.—975
Geometric visualization of normal-coordinate transformations. Application to the calculation of bond-moment parameters and force constants, Willis B. Person and Bryce Crawford, Jr.—1295
Infrared line and band strengths and dipole moment function in HCl and DCl, William S. Benedict, Robert Herman, Gordon E. Moore, and Shirleigh Silverman—1671
Infrared spectrum of dinitrogen tetroxide, Robert N. Wiener and Eugene R. Nixon—906
Infrared spectrum of hexadeuterobenzene-iodine solution, Eldon E. Ferguson—1357(L)
Photochemical separation of mercury isotopes. I. A study of the emission and absorption hyperfine lines of mercury at 2537 A, K. R. Osborn, C. C. McDonald, and H. E. Gunning—124
Preparation of pure mercury isotopes from natural mercury by mercury photosensitization, R. Pertel and H. E. Gunning—219(L)
Raman spectra, vibrational assignments and force constants for BH_3CO and BD_3CO, Robert Cooper Taylor—1131
Solubility of hydrogen and deuterium in nonpolar solvents, M. W. Cook, D. N. Hanson, and B. J. Alder—748
Vibrational spectra of normal and isotopically labeled boric acid, R. R. Servoss and H. M. Clark—1175

Kinetics of Reaction
Activation energy of hydrogen-abstraction reactions, R. E. Dodd—1353(L)
Alpha induced decomposition of ammonia. II. Effects of variations in intensity and pressure, Benjamin B. Burtt and Antoine B. Zahlan—846
Burning-rate studies. A negative pressure exponent in the consumption-rate equation for a liquid system, A. Greenville Whittaker, Harry Williams, and Penniman M. Rust—717(L)
Carbon isotope effect during oxidation of carbon monoxide with nitrogen dioxide, Harold S. Johnston, William A. Bonner, and David J. Wilson—1002
Comments on the importance of ion-molecule reactions in liquid-base radiation chemistry, Robert H. Schuler—425(L)
Comment on the significance of diffusion potentials in ion exchange kinetics, R. Schlögl and F. Helfferich—5
Decomposition of carbon dioxide by ionizing radiation. Part II, P. Harteck and S. Dondes—1727
Dispersion and absorption of sound in liquids in general chemical equilibrium and its application to chemical kinetics, Daisaku Tabuchi—993
Displacement of the maximum in the concentration-time diagram of uni-bi-, bi-uni-, and bi-bimolecular consecutive reactions, M. Talât-Erben—75
Effect of pressure on the isotope effect in a unimolecular gaseous reaction: tritium and carbon-13 effects in the isomerization of cyclopropane, Ralph E. Weston, Jr.—975
Electrolytic hydrogen evolution kinetics and its relation to the electronic and adsorptive properties of the metal, B. E. Conway and J. O'M. Bockris—532
Electron and γ-ray radiolysis of n hexane, H. A. Dewhurst and E. H. Winslow—969(L)
Free radical from perinaphthene, Power B. Sogo, Masao Nakazaki, and Melvin Calvin—1343(L)
Heat transfer in chemically reacting mixtures. I, Joseph O. Hirschfelder—274
Herzberg oxygen bands in "air" afterglows and the night airglow, Charles A. Barth and Joseph Kaplan—506
Heterogeneous reactions involving oxidation and reduction at high pressures and temperatures, H. P. Eugster—1760(L)
Integrated rate equations for isotopic exchange in simple reversible reactions, Robert A. Alberty and Wilmer G. Miller—1231
Interchange of charge between gaseous molecules in resonant and near-resonant processes, E. F. Gurnee and J. L. Magee—1237
Investigations on the reduction of silver sulfide and cuprous sulfide by hydrogen, Haruo Kobayashi and Carl Wagner—1609
Kinetic model for chromatographic dispersion and electrodiffusion, J. Calvin Giddings—1755(L)

Kinetics of Reaction (continued)
Kinetics of reaction between hydrogen and nitrogen dioxide, Willis A. Rosser, Jr., and Henry Wise—571
Kinetics of the nitrogen dioxide catalyzed oxidation of nitric oxide, James D. Ray and Richard A. Ogg, Jr.—984
Luminous reaction between carbon monoxide and atomic nitrogen, Herbert P. Broida and Donald F. Heath—1352(L)
Matrix isolation studies: infrared spectra of intermediate species in the photolysis of hydrazoic acid, Edwin D. Becker, George C. Pimentel, and Mathias Van Thiel—145
Mechanism of formation of pentaborane-9 from pentaborane-11, Riley Schaeffer—1349(L)
Mechanism of the gas phase, thermal decomposition of ozone, Sidney W. Benson and Arthur E. Axworthy, Jr.—1718
Photochemical separation of mercury isotopes. I. A study of the emission and absorption hyperfine lines of mercury at 2537 A, K. R. Osborn, C. C. McDonald, and H. E. Gunning—124
Photon propagated chain reactions and the short wave length photolysis of ozone, Sidney W. Benson—1351(L)
Pseudostationary state approximation in chemical kinetics, Joseph O. Hirschfelder—271
Radiolysis of mixtures: cyclohexane-benzene-iodine, Milton Burton, J. Chang, S. Lipsky, and M. P. Reddy—1337(L)
Rate constants at low concentrations. I. Rate of reaction of ozone with nitrogen dioxide, H. W. Ford, G. J. Doyle, and N. Endow—1336(L)
Rate constants at low concentrations. II. The reaction between nitric oxide and ozone in air at room temperature, H. W. Ford, G. J. Doyle, and N. Endow—1337(L)
Rate constants of second order reactions from kinetic current measurements, W. L. Reynolds and Stephen Prager—1007
Rate of dissociation of bromine in shock waves, H. B. Palmer and D. F. Hornig—98
Rate of recombination of radicals. III. Rate of recombination of ethyl radicals, A. Shepp and K. O. Kutschke—1020
Reaction of carbon monoxide and ozone, P. Harteck and S. Dondes—1734
Reaction products of γ picoline and iodine, Donald L. Glusker and Arthur Miller—331
Relative rates of some very rapid gaseous bimolecular reactions, Jerome Daen and R. A. Marcus—162
Relaxation-time model for free-radical concentration, J. Calvin Giddings—1210
Selective solvation and dielectric saturation as related to electron exchange reactions, Edward S. Amis—880
Sensitized photoionization in far ultraviolet, Ikuzo Tanaka and E. W. R. Steacie—715(L)
Structure of CH_3, G. A. Gallup—716(L)
Studies in nonequilibrium rate processes. I. The relaxation of a system of harmonic oscillators, Elliott W. Montroll and Kurt E. Shuler—454
Studies of I atom and Br atom recombinations following flash photolysis of gaseous I_2 and Br_2, R. L. Strong, J. C. W. Chien, P. E. Graf, and J. E. Willard—1287
Theory of oxidation-reduction reactions involving electron transfer. II. Applications to data on the rates of isotopic exchange reactions, R. A. Marcus—867
Theory of oxidation-reduction reactions involving electron transfer. III. Applications to data on the rates of organic redox reactions, R. A. Marcus—872
Theory of radiation chemistry. IV. Chemical reactions in the general track composed of n particles, L. Monchick, J. L. Magee, and A. H. Samuel—935
Ultraviolet absorption spectra and the chemical mechanism of CS_2–O_2 explosions, Albert L. Myerson, Francis R. Taylor, and Philip L. Hanst—1309

Large Molecules (see **Polymers**)
Light Scattering
Theoretical investigations on the light scattering of colloidal spheres. I. The specific turbidity, Wilfried Heller and William J. Pangonis—498
Theoretical investigations on the light scattering of colloidal spheres. II. Accurate interpolations of theoretical turbidity-data, Wilfried Heller—920
Theoretical investigations on the light scattering of colloidal spheres. III. Analytical expressions for turbidity approximating the performance of the Mie equations prior to the first maximum, Wilfried Heller—1258

Liquids
Activation energy of the Eyring theory of liquid viscosity and diffusion, F. C. Collins—398
Analysis of high resolution NMR spectra, Weston Anderson and Harden M. McConnell—1496
Application of cell theory to liquid hydrocarbons, Robert Simha and Stuart T. Hadden—425(L)
Cell method computation for liquids, Howard B. Levine, Joseph E. Mayer, and Henry Aroeste—207
Curved fluid interfaces. II. The generalized Neumann formula, Frank P. Buff and Howard Saltsburg—23
Curved fluid interfaces. III. The dependence of the free energy on parameters of external force, Frank P. Buff and Howard Saltsburg—1526
Density of liquid He^4, Eugene C. Kerr—511
Dielectric behavior of water at microwave frequencies, E. H. Grant, T. J. Buchanan, and H. F. Cook—156
Direct correlation functions for argon, Arthur Reetz, Jr., and L. H. Lund—518
Dispersion and absorption of sound in liquids in general chemical equilibrium and its application to chemical kinetics, Daisaku Tabuchi—993
Dynamic compression of liquids from measurements on strong shock waves, John M. Walsh and Melvin H. Rice—815
Effect of pressure on dielectric properties and volume of 1-propanol and glycerol, A. Gilchrist, J. E. Earley, and R. H. Cole—196
Effects of pressure on ultrasonic relaxation in liquids, T. A. Litovitz, E. H. Carnevale, and P. A. Kendall—465
Equation of state for water at extreme pressures, J. H. Rosenbaum—684
Equation of state of water to 250 kilobars, Melvin H. Rice and John M. Walsh—824
Heats of vaporization of 1,1,2-trichloroethane, 1-propanol, and 2-propanol; vapor heat capacity of 1,1,2-trichloroethane, Kenneth D. Williamson and Roland H. Harrison—1267
Infrared spectra of HDO in water and ionic solutions, Robert D. Waldron—809
Integral equation method for determining approximate fluid distribution functions, Jacques C. Poirier—1427
Lattice vacancy theory of the liquid state, Charles R. Mueller and Donald C. Stupegia—1522
Medium effects in the nuclear magnetic resonance spectra of liquids. II. Simple aliphatic molecules, Aksel A. Bothner-By and Richard E. Glick—1647
Microwave dielectric measurements in liquid crystals, E. F. Carr—420

Preparation and proton magnetic resonance studies of anhydrous ammonia, Richard A. Ogg, Jr., and James D. Ray—1515
Raman spectrum of triethylborane, Edmund J. Blau and Barry W. Mulligan—1085
Relationship between relaxation time and viscosity for water, E. H. Grant—1575
Structural part of the compressibility of liquids, V. S. Venkatasubramanian—965(L)
Theory of multicomponent fluid mixtures. I. Statistical order-disorder analysis in multicomponent fluid mixtures, Zevi W. Salsburg, Peter J. Wojtowicz, and John G. Kirkwood—1533
Theory of ultrasonic thermal relaxation times in liquids, Theodore A. Litovitz—469
Thermodynamic and transport properties of the system iso-octane and perfluoroheptane, Charles R. Mueller and James E. Lewis—286

Magnetic Resonance

Analysis of high resolution NMR spectra, Weston Anderson and Harden M. McConnell—1496
Anomalous temperature dependence of the spin-lattice relaxation time in ferrocene, C. H. Holm and James A. Ibers—1753(L)
C^{13} nuclear magnetic resonance spectra, Paul C. Lauterbur—217(L)
Comments on the variational calculation of nuclear magnetic shielding, Bruce R. McGarvey—221(L)
Concerning the electron-withdrawing power and the electronegativity of groups, Robert W. Taft, Jr.—93
Electric quadrupole interactions of deuterons and molecular motion in $Li_2SO_4 \cdot D_2O$, S. Ketudat and R. V. Pound—708(L)
Electron spin resonance absorption spectra of some organic free radicals, J. H. Lupinski—1766(L)
Electron spin resonance spectrum of dibenzene chromium cation, Robert D. Feltham, Power Sogo, and Melvin Calvin—1354(L)
Electronic structure of sodium-ammonia solutions by nuclear magnetic resonance, Harden M. McConnell and C. H. Holm—1517
Frequency dependence of proton spin relaxation in aqueous solutions of paramagnetic ions, A. W. Nolle and L. O. Morgan—642
Interpretation of the electron spin resonance spectra of solutions of hydrocarbons in sulfuric acid, S. I. Weissman, E. de Boer, and Joseph J. Conradi—963(L)
Medium effects in the nuclear magnetic resonance spectra of liquids. II. Simple aliphatic molecules, Aksel A. Bothner-By and Richard E. Glick—1647
Medium effects in the nuclear magnetic resonance spectra of liquids. III. Aromatics, Aksel A. Bothner-By and Richard E. Glick—1651
Molecular transfer of nonequilibrium nuclear spin magnetization, Harden M. McConnell and Don D. Thompson—958(L)
NMR spectra of metal alkyls; magnetogyric ratio of Pb^{207}, Edward B. Baker—960(L)
Nuclear magnetic relaxation in 1,2-dichloroethane, Solomon Linder—900
Nuclear magnetic resonance in guanidinium aluminum sulfate hexahydrate, David W. McCall—706(L)
Nuclear magnetic resonance in irradiated polyethylene, Shizuo Fujiwara, Ayao Amamiya, and Kenichi Shinohara—1343(L)
Nuclear magnetic resonance splittings in very weak fields (35–15 Gauss), Dominique P. Roux and George J. Bene—968(L)
Nuclear spin-spin coupling in hydrocarbons, Eiko Aihara—1347(L)
Observation of chemical shielding and spin coupling of C^{13} nuclei in various chemical compounds by nuclear magnetic resonance, C. H. Holm—707(L)
Preparation and proton magnetic resonance studies of anhydrous ammonia, Richard A. Ogg, Jr., and James D. Ray—1515
Proton and nitrogen magnetic resonance spectra and structure of nitramide and nitrourethane, James D. Ray and Richard A. Ogg, Jr.—1452
Proton magnetic resonance of simple amino acids and dipeptides in aqueous solution, Masatami Takeda and Oleg Jardetsky—1346(L)
Proton magnetic resonance of solid *sym*-tetrachloro and tetrabromoethane, M. Takeda and H. S. Gutowsky—577
Proton magnetic resonance spectra of alkyl nitrites, Lawrence H. Piette, James D. Ray, and Richard A. Ogg, Jr.—1341(L)
Proton magnetic resonance spectrum of naphthalene, H. J. Bernstein and W. G. Schneider—957(L)
Proton resonance of fluorobenzene in the earth's magnetic field, D. F. Elliott and R. T. Schumacher—1350(L)
Proton resonance in guanidine aluminum sulfate hexahydrate, R. D. Spence and John Muller—706(L)
Proton resonance in neutron and gamma irradiated polyethylene, N. Fuschillo and J. A. Sauer—1348(L)
Proton spin-lattice relaxation in mesitylene, C. A. Reilly and R. L. Strombotne—1338(L)
Quadrupole interaction of nuclei with conduction electrons, A. H. Mitchell—1714
Quadrupole relaxation broadening of the magnetic resonance spectrum of methylammonium ion, Richard A. Ogg, Jr., and James D. Ray—1340(L)
Quadrupole relaxation and structures in nitrogen magnetic resonances of ammonia and ammonium salts, Richard A. Ogg, Jr., and James D. Ray—1339(L)
Self-diffusion in solid methane, J. S. Waugh—966(L)

Magnetic Susceptibilities

Approximate solution of the Thomas-Fermi equation with Amaldi-Fermi boundary condition, T. Tietz—430(L)
Magnetic dipole effects in ferrites, Richard A. Johnson and Daniel W. Healy, Jr.—1031
Magnetic moment of iron ions, S. Broersma—1405
Magnetic susceptibility of neutron-damaged graphite, John E. Hove and J. D. McClelland—1028
Pairing energies in the actinide series, J. S. Griffith and L. E. Orgel—988
Reinvestigation of reported ferromagnetism in $Li_xNi_{(1-x)}O$, T. P. Janusz, R. R. Heikes, and W. D. Johnston—973(L)
Susceptibility and Curie point of magnetically dilute crystals, Robert E. Behringer—1504

Mass Spectra

Collision-induced dissociations in the mass spectrum of acetylene, C. E. Melton, M. M. Bretscher, and Russell Baldock—1302
Collision-induced dissociations in the mass spectrum of methane, C. E. Melton and H. M. Rosenstock—568
Dissociation energies of Cu_2, Ag_2, and Au_2, Paul Schissel—1275
Electron impact studies on C_2H_5Cl, C_2H_5Br, and C_2H_5I, A. P. Irsa—18
Experimental determinations of charge transfer cross sections and secondary electron emission by ion bombardment, S. N. Ghosh and W. F. Sheridan—480
Ionization and dissociation of hexafluorobenzene by electron impact, Vernon H. Dibeler, Robert M. Reese, and Fred L. Mohler—304

Mass Spectra (continued)
Ionization efficiency curves and the statistical theory of mass spectra, L. Friedman, F. A. Long, and M. Wolfsberg—714(L)
Mass spectrum and vapor pressure of pentaborane-d_9, I. Shapiro and J. F. Ditter—798
Metastable transitions and collision-induced dissociations in mass spectra, H. M. Rosenstock and C. E. Melton—314
Negative ion formation in hydrogen chloride by electron impact, R. E. Fox—1279
Polymeric gaseous species in the sublimation of molybdenum trioxide, J. Berkowitz, Mark G. Inghram, and W. A. Chupka—842
Statistical mechanics of liquid-vapor equilibrium, B. Widom—887
Thermodynamics of the Zr-ZrO_2 system: the dissociation energies of ZrO and ZrO_2, W. A. Chupka, J. Berkowitz, and Mark G. Inghram—1207

Mechanics, Classical

Mechanics, Quantum
Anomalous centrifugal distortion coefficients in linear polyatomic molecules, Harald H. Nielsen, Gilbert Amat, and Mark Goldsmith—1060
Application of configuration interaction to the H_3 complex, Bernard J. Ransil—971(L)
Application of the method of deformed atoms in molecules to the hydrogen molecules, Tadashi Arai—451
Application of the molecular orbital method to the spectra of substituted aromatic hydrocarbons, Lionel Goodman, Ian G. Ross, and Harrison Shull—474
Approximate molecular orbitals, A. Dalgarno, B. L. Moiseiwitsch, and A. L. Stewart—965(L)
Approximate solution of the Thomas-Fermi equation with Amaldi-Fermi boundary condition, T. Tietz—430(L)
Atom form factor for free positive ions based on the Thomas-Fermi theory, M. Majewski and T. Tietz—1772(L)
Atomic scattering factors calculated from the TFD atomic model, L. H. Thomas and K. Umeda—293
Bond energies of transition metal halides, Thomas L. Allen—1644
Calculation on the electronic states of the formaldehyde molecule by a semiempirical molecular orbital method, Tosinobu Anno and Akira Sadô—1759(L)
Central-field approximation for the electronic wave functions of simple molecules, Koichi Funabashi and John L. Magee—407
Chemical bond: a one-dimensional, square well-type model, Gordon M. Barrow—558
Comments on the variational calculation of nuclear magnetic shielding, Bruce R. McGarvey—221(L)
Comparative calculations of LCAO-MOs of the allyl radical, Jiro Higuchi—151
Comparison of methods for computing bond orders and electron densities, John G. Burr, Jr.—431
Complete π-electron treatment of the butadiene molecule and ion, Janice Fain and F. A. Matsen—376
Concerning alternant hydrocarbons, William Moffitt—424(L)
Concerning the electron-withdrawing power and the electronegativity of groups, Robert W. Taft, Jr.—93
Correlation energies in atoms and electron affinities, Tadashi Arai and Tsuyoshi Onishi—70
Derivation of an internuclear potential function from a quantum mechanical model, Ellis R. Lippincott—1678
Distribution of electrons in the water molecule, K. E. Banyard and N. H. March—1416
Electronic band structure in graphite, Masatoshi Yamazaki—930
Electronic spectra of cyclic aromatic hydrocarbon radicals and ions, H. C. Longuet-Higgins and K. Lenore McEwen—719
Electronic spectra of the triarylmethyl radicals, J. N. Murrell—1738
Electronic states of para-benzoquinone. II. Calculation of the energy levels by a semiempirical molecular orbital method including configuration interaction, Tosinobu Anno, Akira Sado, and Ikuo Matabura—967(L)
Electronic structure of the BH molecule, Kimio Ohno—1754(L)
Equivalent orbital bond moments: applications to carbon dioxide and water, Walter C. Hamilton—345
Foreign gas pressure broadening of linear molecules, Kenneth L. Perkins, A. V. Bushkovitch, and L. J. Keiffer—779
High-field Stark effect in linear rotors, Martin Peter and M. W. P. Strandberg—1657
Hindered rotation in molecules with relatively high potential barriers, Karl T. Hecht and David M. Dennison—31
Interrelations of quantum-mechanical quantities concerning chemical reactivity of conjugated molecules, Kenichi Fukui, Teijiro Yonezawam, and Chikayishi Nagata—831
New approach to the quantum-mechanical analysis of the electronic structures of molecules. The method of deformed atoms in molecules, Tadashi Arai—435
1s orbitals as base functions for molecular calculations, Robert G. Parr—428(L)
Pairing energies in the actinide series, J. S. Griffith and L. E. Orgel—988
Perturbation at $v=6$ of the $A^1\Pi$ state of CO, Ryumyo Onaka—1763(L)
π-electron structure of butadiene, R. Stephen Berry—1660
Quantum-mechanical effects in gas dynamics, E. V. Laitone—1560
Radii of transition ions in crystal fields, N. S. Hush and M. H. L. Pryce—143
Remarks on the theory of absorption spectra of symmetrical cyanine-dyes and polyenes, S. Olszewski—1205
Short-range intermolecular forces. I, Edward A. Mason and Joseph O. Hirschfelder—173
Short-range intermolecular forces. II. H_2–H_2 and H_2–H, Edward Mason and Joseph O. Hirschfelder—756
Simple molecular orbital treatment of conjugation in chlorobenzene, John A. Howe and J. H. Goldstein—7
Structure of CH_3, G. A. Gallup—716(L)
Study of the electronic ground state of the ammonia molecule, Harvey Kaplan—1704
Symmetries of electric fields about ions in solutions. Absorption and fluorescence spectra of europic chloride in water, methanol, and ethanol, Edward V. Sayre, Donald G. Miller, and Simon Freed—109
Theory of internal over-all rotational interactions. IV. Stark effect in nonrigid internal rotors, Daniel Kivelson—215
Two-center dipole moment integrals in terms of C-functions, Walter C. Hamilton—1018
Use of Gaussian wave functions in molecular calculations, G. E. Kimball and G. F. Neumark—1285
Vibration-hindered rotation interactions in methyl alcohol. The $J=0\rightarrow1$ transition, Karl T. Hecht and David M. Dennison—48
Why not use Slater orbitals of nonintegral principal quantum number?, Robert G. Parr and Hubert W. Joy—424(L)

Mechanics, Statistical
Application of cell theory to liquid hydrocarbons, Robert Simha and Stuart T. Hadden—425(L)

Cell method computation for liquids, Howard B. Levine, Joseph E. Mayer, and Henry Aroeste—207
Configuration of a polyelectrolyte chain in solution, Irvin M. Krieger—1
Curved fluid interfaces. III. The dependence of the free energy on parameters of external force, Frank P. Buff and Howard Saltsburg—1526
Equations for a lattice gas. I. One-component systems, Howard B. Levine, Joseph E. Mayer, and Henry Aroeste—201
Integral equation method for determining approximate fluid distribution functions, Jacques C. Poirier—1427
Kinetic theory of non-spherical molecules. II, C. F. Curtiss and Charles Muckenfuss—1619
Lattice vacancy theory of the liquid state, Charles R. Mueller and Donald C. Stupegia—1522
Mayer's treatment of ionic solutions, Emmanuel Meeron—804
Numerical solution to the Poisson-Boltzmann equation for spherical polyelectrolyte molecules, F. T. Wall and Joan Berkowitz—114
Partition function for internal rotation in methanol and similar molecular models, J. O. Halford—851
Quantum-mechanical effects in gas dynamics, E. V. Laitone—1560
Regression of fluctuations, Marshall Fixman—1421
Relationship of the second virial coefficient to polymer chain dimensions and interaction parameters, T. A. Orofino and P. J. Flory—1067
Relaxation of vibrational nonequilibrium distributions. III. The effect of radiative transitions on the relaxation behavior, Robert J. Rubin and Kurt E. Shuler—137
Statistical computation of mean dimensions of polymer molecules. IV, F. T. Wall, L. A. Hiller, Jr., and W. F. Atchison—1742
Statistical mechanics of liquid-vapor equilibrium, B. Widom—887
Statistical thermodynamics of r-mer mixtures, A. Bellemans, C. Naar-Colin, and I. Prigogine—712(L)
Studies in nonequilibrium rate processes. I. The relaxation of a system of harmonic oscillators, Elliott W. Montroll and Kurt E. Shuler—454
Theorem of corresponding states for polymers, I. Prigogine, A. Bellemans, and C. Naar-Colin—710(L)
Theorem of corresponding states for polymers, I. Prigogine, A. Bellemans, and C. Naar-Colin—751
Theory of multicomponent fluid mixtures. I. Statistical order-disorder analysis in multicomponent fluid mixtures, Zevi W. Salsburg, Peter J. Wojtowicz, and John G. Kirkwood—1533
Theory of solutions, Terrell L. Hill—955(L)
Third virial coefficient for intermolecular potentials with hard sphere cores, B. J. Alder and J. A. Pople—325

Metals
Dislocations as "active sites" in heterogeneous catalysis, Leland E. Cratty, Jr., and Andrew V. Granato—96
Evaporation of metal crystals, J. P. Hirth and G. M. Pound—1216
Field emission from mercury whiskers, Robert Gomer—1333(L)
Gallium: thermal conductivity; supercooling; negative pressure, Lyman J. Briggs—784
Lattice dynamics of hexagonal close-packed metals, L. J. Slutsky and C. W. Garland—787
Phase transition temperature of polonium, J. M. Goode—1269
Quadrupole interaction of nuclei with conduction electrons, A. H. Mitchell—1714
Relationship between atomic and ionic radii, G. R. Somayajulu and Santi R. Palit—807
Self-diffusion of silver in silver-palladium alloys, N. H. Nachtrieb, J. Petit, and J. Wehrenberg—106
Surface diffusion of hydrogen on nickel, R. Wortman, R. Gomer, and R. Lundy—1334(L)

Microwave Spectra (see **Absorption Spectra**)

Molecular Beams
Lifetime measurements of metastable states in molecular nitrogen, William Lichten—306

Molecular Films (see **Surface Phenomena**)

Molecular Spectra (see **Absorption Spectra, Emission Spectra, Fluorescence, and Raman Spectra**)

Molecular Structure and Constants (see also **Absorption Spectra, Electron, and X-ray Diffraction**)
Absolute intensities for the ultraviolet γ bands of NO, D. Weber and S. S. Penner—860
Absorption spectrum of Co in the vacuum ultraviolet region, Y. Tanaka, A. S. Jursa, and F. LeBlanc—862
Anomalous centrifugal distortion coefficients in linear polyatomic molecules, Harald H. Nielsen, Gilbert Amat, and Mark Goldsmith—1060
Application of configuration interaction to the H_3 complex, Bernard J. Ransil—971(L)
Assignment of the OH bending frequency in alcohols, P. Tarte and R. Deponthiere—962(L)
Bond energies of transition metal halides, Thomas L. Allen—1644
Bonding in copper(II) chelates: solvent effects in their visible absorption spectra, R. Linn Belford, M. Calvin, and Geneva Belford—1165
C—Cl stretching frequencies in relation to rational isomerism, San-ichiro Mizushima, Takehiko Shimanouchi, Kiyoshi Nakamura, Michiro Hayashi, and Soji Tsuchiya—970(L)
C^{13} nuclear magnetic resonance spectra, Paul C. Lauterbur—217(L)
Calculation of energy levels for internal torsion and overall rotation. II. CH_3CHO type molecules; acetaldehyde spectra, R. W. Kilb, Chun Chia Lin, and E. B. Wilson, Jr.—1695
Charge-transfer complexes between chloranil and polycyclic aromatic hydrocarbons, Warner L. Peticolas—429(L)
Collision-induced dissociations in the mass spectrum of acetylene, C. E. Melton, M. M. Bretscher, and Russell Baldock—1302
Complete π-electron treatment of the butadiene molecule and ion, Janice Fain and F. A. Matsen—376
Concerning the electron-withdrawing power and the electronegativity of groups, Robert W. Taft, Jr.—93
Configuration of a polyelectrolyte chain in solution, Irvin M. Krieger—1
Crystal and molecular structures of heterocyclic compounds. III. α-Penazine near 80°K, F. L. Hirschfeld and G. M. J. Schmidt—923
Dipole moment of lithium hydride, R. P. Hurst and F. A. Matsen—1092
Dissociation energies of carbon monoxide and nitrogen from reflected shock wave studies, J. P. Toennies and E. F. Greene—655
Dissociation energies of Cu_2, Ag_2, and Au_2, Paul Schissel—1275
Distribution of electrons in the water molecule, K. E. Banyard and N. H. March—1416
Effects of atomic quadrupole moments upon the index of refraction, Robert A. Satten—766
Elastic and inelastic scattering of low velocity He^+ ions in helium, W. H. Cramer and J. H. Simons—1272
Electric quadrupole interactions of deuterons and molecular motion in $Li_2SO_4 \cdot D_2O$, S. Ketudat and R. V. Pound—708(L)

Molecular Structure and Constants (continued)
Electron impact studies on C_6H_5Cl, C_6H_5Br, and C_6H_5I, A. P. Irsa—18
Electronic structure of the BH molecule, Kimio Ohno—1754(L)
Equivalent orbital bond moments: applications to carbon dioxide and water, Walter C. Hamilton—345
Fluorescence efficiencies of organic compounds, Milton Furst, Hartmut Kallmann, and Felix H. Brown—1321
Free radical from perinaphthene, Power B. Sogo, Masao Nakazaki, and Melvin Calvin—1343(L)
Geometric visualization of normal-coordinate transformations. Application to the calculation of bond-moment parameters and force constants, Willis B. Person and Bryce Crawford, Jr.—1295
Hindered rotation in molecules with relatively high potential barriers, Karl T. Hecht and David M. Dennison—31
Infrared absorption spectra of urea, thiourea, and some thiourea-alkali halide complexes, James E. Stewart—248
Infrared and Raman spectra of fluorinated ethylenes. VII. 1,1-difluoro-2,2-dibromoethylene, Rose Theimer and J. Rud Nielsen—1374
Infrared and Raman spectra of trans-difluorodichloroethylene, D. E. Mann and Earle K. Plyler—773
Infrared and Raman spectra of vanadium oxytrichloride, Foil A. Miller and Lauren R. Cousins—329
Infrared dispersion of hydrogen bromide, Bertram Schurin and R. Rollefson—1089
Infrared line and band strengths and dipole moment function in NCl and DCl, William S. Benedict, Robert Herman, Gordon E. Moore, and Shirleigh Silverman—1671
Infrared spectra and force constants of cyanoacetylene, George C. Turrell, Walter D. Jones, and Arthur Maki—1544
Infrared spectra of ketene and deuteroketenes, William F. Arendale and William H. Fletcher—793
Infrared spectra of the alkali halides. I. Lithium halides, William Klemperer and Stuart A. Rice—618
Infrared spectrum of carbonyl sulfide, Harry C. Allen, Jr., Earle K. Plyler, and L. R. Blaine—400
Infrared spectrum of dinitrogen tetroxide, Robert N. Wiener and Eugene R. Nixon—906
Infrared spectrum of N_2O_4, Robert G. Snyder and I. C. Hisatune—960(L)
Infrared spectrum of $N^{15}O_2$ and force constants of NO_2, Ralph E. Weston, Jr.—1248
Infrared spectrum of solid nitrous oxide, David A. Dows—745
Intensities of infrared bands in solution. I. Benzene solutions, Eldon E. Ferguson—1263
Interaction between sulfur dioxide and polar molecules. I. Systems containing aliphatic alcohols, ethers, or benzene in carbon tetrachloride, P. A. D. de Maine—1036
Interaction between sulfur dioxide and polar molecules. II. Systems containing ethanol and benzene or hydroquinone, P. A. D. de Maine—1042
Interaction between sulfur dioxide and polar molecules. III. The water-ethanol-sulfur dioxide and water-sulfur dioxide systems, P. A. D. de Maine—1049
Interpretation of absorption spectra of anions, Edward M. Kosower, Ronald L. Martin, and Villiers W. Meloche—1353(L)
Iodine complexes in inert solvents. II. Complexes of iodine with some aromatic ethers and biphenyl in carbon tetrachloride, P. A. D. de Maine—1189
Iodine complexes in inert solvents. III. Iodine complexes with methanol, ethanol, or diethyl ether in carbon tetrachloride, P. A. D. de Maine—1192
Ionization and dissociation of hexafluorobenzene by electron impact. Vernon H. Dibeler, Robert M. Reese, and Fred L. Mohler—304
Ionization potentials of ammonia and some amines, K. Watanabe and Joseph R. Mottl—1773(L)
Ionization potentials of some molecules, K. Watanabe—542
K x-ray absorption edges of Cr, Mn, Fe, Co, Ni ions in complexes, F. A. Cotton and H. P. Hanson—1758(L)
Lifetime measurements of metastable states in molecular nitrogen, William Lichten—306
Microwave determination of the structure of fluorobenzene, Børge Bak, Daniel Christensen, Lise Hansen-Nygaard, and Eileen Tannenbaum—134
Microwave determination of the structure of trifluorobutyne, Børge Bak, Daniel Christensen, Lise Hansen-Nygaard, and Eileen Tannenbaum—241
Microwave spectrum and barrier to internal rotation in CH_3BF_2, Robert E. Naylor, Jr., and E. Bright Wilson, Jr.—1057
Microwave spectrum and structure of formic acid, R. G. Lerner, B. P. Dailey, and J. P. Friend—680
Microwave spectrum and structure of propionitrile, R. G. Lerner and B. P. Dailey—678
Microwave spectrum and structure of sulfuryl fluoride, David R. Lide, Jr., D. E. Mann, and R. M. Fristrom—734
Microwave spectrum, dipole moment, and structure of difluorosilane, Victor W. Laurie—1359
Microwave spectrum, structure, and dipole moment of *s-trans* acrolein, Roselin Wagner, J. Fine, J. W. Simmons, and J. H. Goldstein—634
Microwave spectrum of ethyl bromide, Roselin S. Wagner, B. P. Dailey, and N. Solimene—1593
Microwave spectrum of ethyl chloride, Roselin S. Wagner and B. P. Dailey—1588
Near ultraviolet spectrum of crystalline hexamethyl benzene and the structure of the hexamethyl benzene molecule, O. Schnepp and Donald S. McClure—83
Negative ion formation in hydrogen chloride by electron impact, R. E. Fox—1279
Neutron diffraction study of calcium hydroxide, William R. Busing and Henri A. Levy—563
NMR spectra of metal alkyls; magnetogyric ratio of Pb^{207}, Edward B. Baker—960(L)
Normal frequencies of tetrahedral $M(XY)_4$ molecules, Hiromu Murata and Kiyoyasu Kawai—1355(L)
Nuclear magnetic resonance in guanidinium aluminum sulfate hexahydrate, David W. McCall—706(L)
Nuclear magnetic resonance splittings in very weak fields (35–15 Gauss), Dominique P. Roux and George J. Bene—968(L)
Observation of chemical shielding and spin coupling of C^{13} nuclei in various chemical compounds by nuclear magnetic resonance, C. H. Holm—707(L)
Partition function for internal rotation in methanol and similar molecular models, J. O. Halford—851
Perpendicular bands of allene, K. Narahari Rao, A. H. Nielsen, and W. H. Fletcher—1572
Perturbation at v=6 of the $A^1\Pi$ state of CO, Ryumyo Onaka—1763(L)
Photoionization counter for determination of ionization potentials, Hajime Sakai, John W. Little, and K. Watanabe—1335(L)
Polymeric gaseous species in the sublimation of molybdenum trioxide, J. Berkowitz, Mark G. Inghram, and W. A. Chupka—842

Polynuclear metal carbonyls. I. Structures of $Mn_2(CO)_{10}$ and $Re_2(CO)_{10}$, Lawrence F. Dahl, Etsuro Ishishi, and R. E. Rundle—1750(L)
Polynuclear metal carbonyls. II. Structure of iron tetracarbonyl by x-ray diffraction, Lawrence F. Dahl and R. E. Rundle—1751(L)
Potential constants of nitrous acid, Ann Palm—855
Proton and nitrogen magnetic resonance spectra and structure of nitramide and nitrourethane, James D. Ray and Richard A. Ogg, Jr.—1452
Proton positions in $CuCl_2 \cdot 2H_2O$ by neutron diffraction, S. W. Peterson and Henri A. Levy—220(L)
Proton resonance in guanidine aluminum sulfate hexahydrate, R. D. Spence and John Muller—706(L)
Pure rotational absorption spectra of the methyl halides in the spectral region 100–600 μ, E. D. Palik and K. Narahari Rao—1401
Pure rotational spectra of the partially deuterated ammonias in the far infrared spectral region, E. D. Palik and Ely E. Bell—1093
Quadrupole relaxation and structures in nitrogen magnetic resonances of ammonia and ammonium salts, Richard A. Ogg, Jr., and James D. Ray—1339(L)
Raman and infrared spectra of 2-thiabutane, Michiro Hayashi, Takehiko Shimanouchi, and San-ichiro Mizushima —608
Raman spectra, vibrational assignments and force constants for BH_3CO and BD_3CO, Robert Cooper Taylor —1131
Raman spectrum and vibrational assignments of gaseous dimethyl ether, Robert C. Taylor and Guido L. Vidale —122
Raman spectrum of gaseous 1-fluoro-1-chloroethylene, J. Rud Nielsen and J. C. Albright—1566
Relationship between O—H bond length and O...O distance in hydrogen bonds, H. K. Welsh—710
Relationship of the second virial coefficient to polymer chain dimensions and interaction parameters, T. A. Orofino and P. J. Flory—1067
Rotation-vibration spectra of methyl amine and its deuterium derivatives, Allan P. Gray and R. C. Lord—690
"Sensitive" methyl vibrational frequencies—their relation to electronegativity and the inductive effect, J. K. Wilmshurst—426(L)
Simple molecular orbital treatment of conjugation in chlorobenzene, John A. Howe and J. H. Goldstein—7
Spectra of some symmetric-top molecules in the one- to four-millimeter wave region, Charles A. Burrus and Walter Gordy—391
Spectroscopic survey of energy distributions of OH, C_2, and CH radicals in low pressure acetylene-oxygen flames, Herbert P. Broida and Donald F. Heath—223
Structure of CH_3, G. A. Gallup—716(L)
Study of the electronic ground state of the ammonia molecule, Harvey Kaplan—1704
Symmetries of electric fields about ions in solutions. Absorption and fluorescence spectra of europic chloride in water, methanol, and ethanol, Edward V. Sayre, Donald G. Miller, and Simon Freed—109
Theoretical investigation of vibrational frequency distributions for molecular crystals having the cyanogen iodide structure, Thomas H. Walnut—10
Theoretical study of the hyperfine structure in the inversion spectra of the deutero-ammonias, George F. Hadley —1482
Thermodynamic functions of 1,1,2-trichloroethane, Roland H. Harrison and Kenneth A. Kobe—1411
Thermodynamic functions for some halogenated methyl cyanides, George J. Janz and Samuel C. Wait, Jr.—1766(L)
Use of Gaussian wave functions in molecular calculations, G. E. Kimball and G. F. Neumark—1285
ν_3 band of methane, Harry C. Allen, Jr., and Earle K. Plyler—972(L)
Vaporization coefficient of graphite and composition of the equilibrium vapor, R. J. Thorn and G. H. Winslow —186
Vibration-hindered rotation interactions in methyl alcohol. The $J=0\rightarrow1$ transition, Karl T. Hecht and David M. Dennison—48
Vibrational spectra and molecular structure of some halogenated methyl cyanides, Samuel C. Wait, Jr., and George J. Janz—1554
Vibrational spectra and structure of solid sulfamic acid and the sulfamate ion, A. M. Vuagnat and E. L. Wagner —77
Vibrational spectra of hexafluorobutadiene-1,3, J. C. Albright and J. Rud Nielsen—370
Vibrational spectra of normal and B^{10}-labeled methyl borate, R. R. Servoss and H. M. Clark—1179
Vibrational spectra of normal and isotopically labeled boric acid, R. R. Servoss and H. M. Clark—1175
Vibrational spectra of polyethylenes and related substances, J. Rud Nielsen and A. H. Woollett—1391
Vibrational spectra, potential constants, and calculated thermodynamic properties of *cis-* and *trans*-BrHC=CHBr, and *cis-* and *trans*-BrDC=CDBr, Jerome M. Dowling, P. G. Puranik, Arnold G. Meister, and Sidney I. Miller—233
Vibrational spectrum and force constants of diboron tetrachloride, D. E. Mann and Lilla Fano—1665
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. I. $KAg(CN)_2$, Llewellyn H. Jones—1578
Vibrational spectrum and structure of the tropylium ion, William G. Fateley, Basil Curnutte, and Ellis R. Lippincott—1471
Vibrational spectrum of borine carbonyl, George W. Bethke and M. Kent Wilson—1118
Vibrational spectrum of disilane, George W. Bethke and M. Kent Wilson—1107
Vibrational spectrum of *N*-methyl formamide, D. E. DeGraaf and G. B. B. M. Sutherland—716(L)
Vibrational structure in the ionization efficiency curves of hydrogen and deuterium molecules, Morris Krauss and Allen Kropf—1776(L)
Zeeman effect on the quadrupole spectrum of iodic acid, Ralph Livingston and Henry Zeldes—351

Neutron Diffraction

Neutron diffraction study of calcium hydroxide, William R. Busing and Henri A. Levy—563
Proton positions in $CuCl_2 \cdot 2H_2O$ by neutron diffraction, S. W. Peterson and Henri A. Levy—220(L)

Nuclear Quadrupole Resonance

Dimerization of solid group III*B* trihalides. III. Bromine, gallium, and indium quadrupole resonances in $GaBr_3$, GaI_3, $InBr_3$, and InI_3, R. G. Barnes, S. L. Segel, P. J. Bray, and P. A. Casabella—1345(L)
Effect of impurities on the Cl^{35} quadrupole resonance in C_6H_5Cl, R. E. Michel and R. D. Spence—954(L)
Zeeman effect on the quadrupole spectra of sodium, potassium, and barium chlorates, Henry Zeldes and Ralph Livingston—1102
Zeeman effect on the quadrupole spectrum of iodic acid, Ralph Livingston and Henry Zeldes—351

Nuclear Resonance (see **Magnetic Resonance**)

Nucleation

Phase Transitions
Coexistence curve of the triethylamine-water system, F. Kohler and O. K. Rice—1614
Dielectric absorption and phase changes in an aliphatic ester in the waxy form, J S. Dryden—604
Effect of electric field on the phase transition of ammonium sulfate, Kan-Ichi Kamiyoshi—218(L)
Investigations on cuprous selenide and copper tellurides, Gert Lorenz and Carl Wagner—1607
New phase transition in HI, G. L. Hiebert and D. F. Hornig—1762(L)
Phase transition temperature of polonium, J. M. Goode—1269
Transition temperatures in some polymers by differential thermal analysis, D. M. Chackraburtty—427(L)

Phosphors
Energy states and luminescent processes in the ZnF_2:$\dot{M}n$ phosphor, Peter D. Johnson and Floyd L. Hughes—612
Study of the scintillation process, E. R. Hardwick and W. G. McMillan—1463
Use of interpolation theory in the study of phosphorescence, J. M. Honig—1454

Photochemistry
C^{13}-isotope effect in the photolysis of ethyl bromide, H. L. Friedman, R. B. Bernstein, and H. E. Gunning—528
Correction for reflection, absorption, and scattering in photometric experiments; the extinction coefficient of gaseous chlorine at 4358 A, M. J. Dignam and D. J. Le Roy—964(L)
Matrix isolation studies: infrared spectra of intermediate species in the photolysis of hydrazoic acid, Edwin D. Becker, George C. Pimentel, and Mathias Van Thiel—145
Photochemical separation of mercury isotopes. I. A study of the emission and absorption hyperfine lines of mercury at 2537 A, K. R. Osborn, C. C. McDonald, and H. E. Gunning—124
Photon propagated chain reactions and the short wave length photolysis of ozone, Sidney W. Benson—1351(L)
Preparation of pure mercury isotopes from natural mercury by mercury photosensitization, R. Pertel and H. E. Gunning—219(L)
Sensitized photoionization in far ultraviolet, Ikuzo Tanaka and E. W. R. Steacie—715(L)
Studies of I atom and Br atom recombinations following flash photolysis of gaseous I_2 and Br_2, R. L. Strong, J. C. W. Chien, P. E. Graf, and J. E. Willard—1287

Photoconductivity
Effect of surface condition on the fluorescence and surface photoconductivity of anthracene, F. R. Lipsett, D. M. J. Compton, and T. C. Waddington—1444
Zinc oxide photoconduction, an oxygen adsorption process, Donald A. Melnick—1136

Photoionization
Sensitized photoionization in far ultraviolet, Ikuzo Tanaka and E. W. R. Steacie—715(L)

Polymers
Application of cell theory to liquid hydrocarbons, Robert Simha and Stuart T. Hadden—425(L)
Calculation of compressibilities of high polymers from the energy of interaction between chain groups, Werner Brandt—262
Configuration of a polyelectrolyte chain in solution, Irvin M. Krieger—1
Entropy of mixing of dilute polymer solutions, Alden H. Emery, Jr.—1254
Nuclear magnetic resonance in irradiated polyethylene, Shizuo Fujiwara, Ayao Amamiya, and Kenichi Shinohara—1343(L)
Numerical solution to the Poisson-Boltzmann equation for spherical polyelectrolyte molecules, F. T. Wall and Joan Berkowitz—114
Optical activity of a solution of macromolecules in a hydrodynamic field, Ignacio Tinoco, Jr.—1356(L)
Potentiometric titration, association phenomena, and interaction of neighboring groups in polyelectrolytes, Shneior Lifson—727
Proton resonance in neutron and gamma irradiated polyethylene, N. Fuschillo and J. A. Sauer—1348(L)
Relationship of the second virial coefficient to polymer chain dimensions and interaction parameters, T. A. Orofino and P. J. Flory—1067
Statistical computation of mean dimensions of polymer molecules. IV, F. T. Wall, L. A. Hiller, Jr., and W. F. Atchison—1742
Statistical thermodynamics of *r*-mer mixtures, A. Bellemans, C. Naar-Colin, and I. Prigogine—712(L)
Streaming birefringence of polymer solutions. Anisotropy of internal fields, Milan Copic—1382
Theorem of corresponding states for polymers, I. Prigogine, A. Bellemans, and C. Naar-Colin—710(L)
Theorem of corresponding states for polymers, I. Prigogine, A. Bellemans, and C. Naar-Colin—751
Theoretical investigations on the light scattering of colloidal spheres. I. The specific turbidity, Wilfried Heller and William J. Pangonis—498
Theoretical investigations on the light scattering of colloidal spheres. III. Analytical expressions for turbidity approximating the performance of the Mie equations prior to the first maximum, Wilfried Heller—1258
Transition temperatures in some polymers by differential thermal analysis, D. M. Chackraburtty—427(L)
Vibration spectrum and heat capacity of a chain polymer crystal, S. M. Genensky and G. F. Newell—486
Vibrational spectra of polyethylenes and related substances, J. Rud Nielsen and A. H. Woollett—1391
Viscoelastic theory of branched and cross-linked polymers, Joe S. Ham—625

Proteins

Quadrupole Resonance (see **Nuclear Quadrupole Resonance**)

Quantum Mechanics (see **Mechanics, Quantum**)

Radiation Chemistry
Alpha induced decomposition of ammonia. II. Effects of variations in intensity and pressure, Benjamin B. Burtt and Antoine B. Zahlan—846
Comments on the importance of ion-molecule reactions in liquid-base radiation chemistry, Robert H. Schuler—425(L)
Decomposition of carbon dioxide by ionizing radiation. Part II, B. Harteck and S. Dondes—1727
Electron and γ-ray radiolysis of *n* hexane, H. A. Dewhurst and E. H. Winslow—969(L)
Note on the helium-ion radiolysis products of liquid acetic and propionic acids, Amos S. Newton—1764(L)
Radiolysis of mixtures: cyclohexane-benzene-iodine, Milton Burton, J. Chang, S. Lipsky, and M. P. Reddy—1337(L)
Retardation of a radiochemical reaction by charge transfer in a bimolecular mixture of gases, S. C. Lind and P. S. Rudolph—1768(L)
Theory of radiation chemistry. IV. Chemical reactions in the general track composed of *n* particles, L. Monchick, J. L. Magee, and A. H. Samuel—935

Radiochemistry

Raman Spectra
Calculation of dipole derivatives from infrared reflection spectra or Raman spectra of crystals, C. Haas and D. F. Hornig—707(L)
Electronic spectrum and dissociation energy of fluorine, A. L. G. Rees—1567
Flexibility of chemical bond as revealed by the rocking frequencies in ethylene, Takehiko Shimanouchi—594
Infrared and Raman spectra of fluorinated ethylenes. VII. 1,1-difluoro-2,2-dibromoethylene, Rose Theimer and J. Rud Nielsen—1374
Infrared and Raman spectra of trans-difluorodichloroethylene, D. E. Mann and Earle K. Plyler—773
Infrared and Raman spectra of vanadium oxytrichloride, Foil A. Miller and Lauren R. Cousins—329
Raman and infrared spectra of 2-thiabutane, Michiro Hayashi, Takehiko Shimanouchi, and San-ichiro Mizushima—608
Raman effect in mixtures of some esters with phenol and alcohols: hydrogen bond formation, P. G. Puranik—601
Raman spectra, vibrational assignments and force constants for BH_3CO and BD_3CO, Robert Cooper Taylor—1131
Raman spectrum and vibrational assignments of gaseous dimethyl ether, Robert C. Taylor and Guido L. Vidale—122
Raman spectrum of gaseous 1-fluoro-1-chloroethylene, J. Rud Nielsen and J. C. Albright—1566
Raman spectrum of triethylborane, Edmund J. Blau and Barry W. Mulligan—1085
Vibrational spectra and molecular structure of some halogenated methyl cyanides, Samuel C. Wait, Jr., and George J. Janz—1554
Vibrational spectra of normal and B^{10}-labeled methyl borate, R. R. Servoss and H. M. Clark—1179
Vibrational spectra of normal and isotopically labeled boric acid, R. R. Servoss and H. M. Clark—1175
Vibrational spectra of polyethylenes and related substances, J. Rud Nielsen and A. H. Woollett—1391
Vibrational spectra, potential constants, and calculated thermodynamic properties of *cis*- and *trans*-BrHC=CHBr, and *cis*- and *trans*-BrDC=CDBr, Jerome M. Dowling, P. G. Puranik, Arnold G. Meister, and Sidney I. Miller—233
Vibrational spectrum and force constants of diboron tetrachloride, D. E. Mann and Lilla Fano—1665
Vibrational spectrum and structure of the tropylium ion, William G. Fateley, Basil Curnutte, and Ellis R. Lippincott—1471
Vibrational spectrum of borine carbonyl, George W. Bethke and M. Kent Wilson—1118
Vibrational spectrum of disilane, George W. Bethke and M. Kent Wilson—1107

Reaction Rates (see **Kinetics of Reaction**)

Refractive Indexes

Rotation
High-field Stark effect in linear rotors, Martin Peter and M. W. P. Strandberg—1657
Hindered rotation in molecules with relatively high potential barriers, Karl T. Hecht and David M. Dennison—31
Microwave spectrum and structure of propionitrile, R. G. Lerner and B. P. Dailey—678
Partition function for internal rotation in methanol and similar molecular models, J. O. Halford—851
Pure rotational absorption spectra of the methyl halides in the spectral region 100–600 μ, E. D. Palik and K. Narahari Rao—1401
Pure rotational spectra of the partially deuterated ammonias in the far infrared spectral region, E. D. Palik and Ely E. Bell—1093
Theory of internal over-all rotational interactions. IV. Stark effect in nonrigid internal rotors, Daniel Kivelson—215
Thermodynamic functions of 1,1,2-trichloroethane, Roland H. Harrison and Kenneth A. Kobe—1411
Vibration-hindered rotation interactions in methyl alcohol. The $J=0\rightarrow1$ transition, Karl T. Hecht and David M. Dennison—48
Vibrational spectrum and force constants of diboron tetrachloride, D. E. Mann and Lilla Fano—1665

Rotational Isomerism
Raman and infrared spectra of 2-thiabutane, Michiro Hayashi, Takehiko Shimanouchi, and San-Ichiro Mizushima—608
Spectroscopic studies of rotational isomerism in fluorinated ethanes. III. CF_2Cl-CF_2Cl and CF_2Br-CF_3Cl, R. E. Kagarise—380

Scattering
Atomic scattering factors calculated from the TFD atomic model, L. H. Thomas and K. Umeda—293
Elastic and inelastic scattering of low-velocity H^- ions in hydrogen. II, E. E. Muschlitz, Jr., T. L. Bailey, and J. H. Simons—711(L)
Elastic and inelastic scattering of low velocity He^+ ions in helium, W. H. Cramer and J. H. Simons—1272
Experimental determinations of charge transfer cross sections and secondary electron emission by ion bombardment, S. N. Ghosh and W. F. Sheridan—480
Interchange of charge between gaseous molecules in resonant and near-resonant processes, E. F. Gurnee and J. L. Magee—1237
Scattering of low energy H^- ions in helium, neon, and argon, T. L. Bailey, C. J. May, and E. E. Muschlitz, Jr.—1446
Scattering of low velocity molecular beams in gases, Edward A. Mason—667

Secondary Electron Emission

Sedimentation

Semiconductors
Recognition and classification of semiconducting compounds with tetrahedral sp^3 bonds, E. Mooser and W. B. Pearson—893

Shock Waves (see also **Detonation**)
Dissociation energies of carbon monoxide and nitrogen from reflected shock wave studies, J. P. Toennies and E. F. Greene—655
Dynamic compression of liquids from measurements on strong shock waves, John M. Walsh and Melvin H. Rice—815
Emission and two-body recombination in bromine, Howard B. Palmer—648
Equation of state of water to 250 kilobars, Melvin H. Rice and John M. Walsh—824
Rate of dissociation of bromine in shock waves, H. B. Palmer and D. F. Hornig—98
Shock-excitation of atomic and molecular spectra, R. W. Nicholls and W. H. Parkinson—423(L)

Solutions (see also **Liquids**)
Coexistence curve of the triethylamine-water system, F. Kohler and O. K. Rice—1614
Comment on the significance of diffusion potentials in ion exchange kinetics, R. Schlögl and F. Helfferich—5
Configuration of a polyelectrolyte chain in solution, Irvin M. Krieger—1
Dispersion and absorption of sound in liquids in general chemical equilibrium and its application to chemical kinetics, Daisaku Tabuchi—993

Solutions (continued)
Electronic structure of sodium-ammonia solutions by nuclear magnetic resonance, Harden M. McConnell and C. H. Holm—1517
Entropy of mixing of dilute polymer solutions, Alden H. Emery, Jr.—1254
Frequency dependence of proton spin relaxation in aqueous solutions of paramagnetic ions, A. W. Nolle and L. O. Morgan—642
Infrared spectra of HDO in water and ionic solutions, Robert D. Waldron—809
Infrared spectrum of hexadeuterobenzene-iodine solution, Eldon E. Ferguson—1357(L)
Intensities of infrared bands in solution. I. Benzene solutions, Eldon E. Ferguson—1263
Interaction between sulfur dioxide and polar molecules. I. Systems containing aliphatic alcohols, ethers, or benzene in carbon tetrachloride, P. A. D. de Maine—1036
Interaction between sulfur dioxide and polar molecules. II. Systems containing ethanol and benzene or hydroquinone, P. A. D. de Maine—1042
Interpretation of absorption spectra of anions, Edward M. Kosower, Ronald L. Martin and Villiere W. Meloche —1353(L)
Interpretation of the electron spin resonance spectra of solutions of hydrocarbons in sulfuric acid, S. I. Weissman, E. de Boer, and Joseph J. Conradi—963(L)
Iodine complexes in inert solvents. II. Complexes of iodine with some aromatic ethers and biphenyl in carbon tetrachloride, P. A. D. de Maine—1189
Iodine complexes in inert solvents. III. Iodine complexes with methanol, ethanol, or diethyl ether in carbon tetrachloride, P. A. D. de Maine—1192
Iodine complexes in inert solvents. VI. Solvation processes in solutions of oxygenated solvents and iodine, bromine, or sulfur dioxide, P. A. D. de Maine—1199
Lattice vacancy theory of the liquid state, Charles R. Mueller and Donald C. Stupegia—1522
Mayer's treatment of ionic solutions, Emmanuel Meeron —804
Medium effects in the nuclear magnetic resonance spectra of liquids. III. Aromatics, Aksel A. Bothner-By and Richard E. Glick—1651
Multiple relaxation times in non-rigid solute molecules, Mansel Davies and R. J. Meakins—1584
Numerical solution to the Poisson-Boltzmann equation for spherical polyelectrolyte molecules, F. T. Wall and Joan Berkowitz—114
Optical activity of a solution of macromolecules in a hydrodynamic field, Ignacio Tinoco, Jr.—1356(L)
Potentiometric titration, association phenomena, and interaction of neighboring groups in polyelectrolytes, Shneior Lifson—727
Proton magnetic resonance of simple amino acids and dipeptides in aqueous solution, Masatami Takeda and Oleg Jardetsky—1346(L)
Role of collision transfer in fluorescent solutions, R. Hardwick—323
Selective solvation and dielectric saturation as related to electron exchange reactions, Edward S. Amis—880
Singlet-triplet absorption in biacetyl solutions, Leslie S. Forster—1761(L)
Solubility of hydrogen and deuterium in nonpolar solvents, M. W. Cook, D. N. Hanson, and B. J. Alder—748
Streaming birefringence of polymer solutions. Anisotropy of internal fields, Milan Copic—1382
Symmetries of electric fields about ions in solutions. Absorption and fluorescence spectra of europic chloride in water, methanol, and ethanol, Edward V. Sayre, Donald G. Miller, and Simon Freed—109
Theory of solutions, Terrell L. Hill—955(L)

Spectra (see **Absorption Spectra, Emission Spectra, Fluorescence, Raman Spectra**)

Statistical Mechanics (see **Mechanics, Statistical**)

Surface Phenomena
Calculation of the surface energies of alkali halide crystals, F. van Zeggeren and G. C. Benson—1077
Capillary cone method for determination of surface tension of solids, A. Skapski, R. Billups, and A. Rooney —1350(L)
Concerning the separation of isotopes by surface diffusion in porous media, W. G. Trawick and A. S. Berman —709(L)
Diffusion and gas sorption rates obeying the Elovich equation, Thomas Freund—713(L)
Effect of poisoned sites on the electrical analog of a metal/solution interface, Sigmund Schuldiner and James P. Hoare—1771(L)
Effect of surface condition on the fluorescence and surface photoconductivity of anthracene, F. R. Lipsett, D. M. J. Compton, and T. C. Waddington—1444
Electroreduction of anions, A. N. Frumkin and N. V. Nikolajeva—1552
Entropy of chemisorbed hydrogen, Tetsuo Takaishi and Akio Kobayashi—1542
Heterogeneous reactions involving oxidation and reduction at high pressures and temperatures, H. P. Eugster—1760(L)
Interaction of rare gases with graphite, A. D. Crowell—1407
Investigations on the reduction of silver sulfide and cuprous sulfide by hydrogen, Haruo Kobayashi and Carl Wagner —1609
Kinetic model for chromatographic dispersion and electrodiffusion, J. Calvin Giddings—1755(L)
Mobility and adsorption of hydrogen on tungsten, R. Gomer, R. Wortman, and R. Lundy—1147
Spin-orbital perturbation in cyanine dyes adsorbed on surfaces containing high-Z atoms, Enrico Clementi and Michael Kasha—956(L)
Stochastic considerations on chromatographic dispersion, J. Calvin Giddings—169
Structure sensitive chemisorption, Gert Ehrlich and T. W. Hickmott—219(L)
Surface diffusion of hydrogen on nickel, R. Wortman, R. Gomer, and R. Lundy—1334(L)
Thermoelectric behavior of solid particulate systems. Nickel oxide, G. Parravano and C. A. Domenicali—359
Zinc oxide photoconduction, an oxygen adsorption process, Donald A. Melnick—1136

Thermal Diffusion
Intermolecular potentials for unlike interaction on exp-six model, K. P. Srivastava—579

Thermodynamic Properties
Absorption spectrum of CO in the vacuum ultraviolet region, Y. Tanaka, A. S. Jurca, and F. LeBlanc—862
Bond energies of transition metal halides, Thomas L. Allen —1644
Calculation of compressibilities of high polymers from the energy of interaction between chain groups, Werner Brandt—262
Calculation of the heat capacity of α quartz and vitreous silica from spectroscopic data, R. C. Lord and J. C. Morrow—230
Density of liquid He^4, Eugene C. Kerr—511
Dissociation energies of carbon monoxide and nitrogen from reflected shock wave studies, J. P. Toennies and E. F. Greene—655

Dissociation energies of Cu_2, Ag_2, and Au_2, Paul Schissel —1275
Dynamic compression of liquids from measurements on strong shock waves, John M. Walsh and Melvin H. Rice—815
Effect of irradiation on the low-temperature specific heat of graphite, W. DeSorbo and W. W. Tyler—244
Electronic spectrum and dissociation energy of fluorine, A. L. G. Rees—1567
Entropy of chemisorbed hydrogen, Tetsuo Takaishi and Akio Kobayashi—1542
Equation of state for water at extreme pressures, J. H. Rosenbaum—684
Equation of state of water to 250 kilobars, Melvin H. Rice and John M. Walsh—824
Estimation of energies and entropies of vaporization, Rudolph J. Marcus—1765(L)
Heats of vaporization of 1,1,2-trichloroethane, 1-propanol, and 2-propanol; vapor heat capacity of 1,1,2-trichloroethane, Kenneth D. Williamson and Roland H. Harrison —1267
Infrared and Raman spectra of fluorinated ethylenes. VII. 1,1-difluoro-2,2-dibromoethylene, Rose Theimer and J. Rud Nielsen—1374
Infrared and Raman spectra of *trans*-difluorodichloroethylene, D. E. Mann and Earle K. Plyler—773
Interaction between sulfur dioxide and polar molecules. I. Systems containing aliphatic alcohols, ethers, or benzene in carbon tetrachloride, P. A. D. de Maine—1036
Interaction between sulfur dioxide and polar molecules. II. Systems containing ethanol and benzene or hydroquinone, P. A. D. de Maine—1042
Interaction between sulfur dioxide and polar molecules. III. The water-ethanol-sulfur dioxide and water-sulfur dioxide systems, P. A. D. de Maine—1049
Investigations on cuprous selenide and copper tellurides, Gert Lorenz and Carl Wagner—1607
Investigations on cuprous sulfide, J. Bruce Wagner and Carl Wagner—1602
Iodine complexes in inert solvents. II. Complexes of iodine with some aromatic ethers and biphenyl in carbon tetrachloride, P. A. D. de Maine—1189
Iodine complexes in inert solvents. III. Iodine complexes with methanol, ethanol, or diethyl ether in carbon tetrachloride, P. A. D. de Maine—1192
Ionization potentials of ammonia and some amines, K. Watanabe and Joseph R. Mottl—1773(L)
Lattice entropies—entropies of vaporization of ions from crystals, A. P. Altshuller—404
Mass spectrum and vapor pressure of pentaborane-d_9, I. Shapiro and J. F. Ditter—798
Medium effects in the nuclear magnetic resonance spectra of liquids. III. Aromatics, Aksel A. Bothner-By and Richard E. Glick—1651
Phase transition temperature of polonium, J. M. Goode —1269
Polymeric gaseous species in the sublimation of molybdenum trioxide, J. Berkowitz, Mark G. Inghram, and W. A. Chupka—842
Small angle x-ray scattering from the low carbon paraffins, John W. Buttrey—1378
Solubility of hydrogen and deuterium in nonpolar solvents, M. W. Cook, D. N. Hanson, and B. J. Alder—748
Structural part of the compressibility of liquids, V. S. Venkatasubramanian—956(L)
Thermodynamic and transport properties of the system iso-octane and perfluoroheptane, Charles R. Mueller and James E. Lewis—286
Thermodynamic functions for some halogenated methyl cyanides, George J. Janz and Samuel C. Wait, Jr.—1766(L)
Thermodynamic functions of 1,1,2-trichloroethane, Roland H. Harrison and Kenneth A. Kobe—1411
Thermodynamic functions of some simple fluorine compounds, Robert L. Potter—394
Thermodynamics of the $Zr-ZrO_2$ system: the dissociation energies of ZrO and ZrO_2, W. A. Chupka, J. Berkowitz, and Mark G. Inghram—1207
Vaporization coefficient of graphite and composition of the equilibrium vapor, R. J. Thorn and G. H. Winslow—186
Vibrational spectra, potential constants, and calculated thermodynamic properties of *cis*- and *trans*-BrHC=CHBr, and *cis*- and *trans*-BrDC=CDBr, Jerome M. Dowling, P. G. Puranik, Arnold G. Meister, and Sidney I. Miller—233

Thermodynamics

Coexistence curve of the triethylamine-water system, F. Kohler and O. K. Rice—1614
Curved fluid interfaces. II. The generalized Neumann formula, Frank P. Buff and Howard Saltsburg—23
Curved fluid interfaces. III. The dependence of the free energy on parameters of external force, Frank P. Buff and Howard Saltsburg—1526
Entropy of mixing of dilute polymer solutions, Alden H. Emery, Jr.—1254
Iodine complexes in inert solvents. VI. Solvation processes in solutions of oxygenated solvents and iodine, bromine, or sulfur dioxide, P. A. D. de Maine—1199
Lattice vacancy theory of the liquid state, Charles R. Mueller and Donald C. Stupegia—1522
Partition function for internal rotation in methanol and similar molecular models, J. O. Halford—851
Statistical mechanics of liquid-vapor equilibrium, B. Widom—887
Statistical thermodynamics of r-mer mixtures, A. Bellemans, C. Naar-Colin, and I. Prigogine—712(L)
Theorem of corresponding states for polymers, I. Prigogine, A. Bellemans, and C. Naar-Colin—710(L)
Theorem of corresponding states for polymers, I. Prigogine, A. Bellemans, and C. Naar-Colin—751
Thermal conductivity of gas mixtures in chemical equilibrium, James N. Butler and Richard S. Brokaw—1636
Thermodynamic formulas for two-phase systems, James C. M. Li—909
Third virial coefficient for intermolecular potentials with hard sphere cores, B. J. Alder and J. A. Pople—325
Vibration spectrum and heat capacity of a chain polymer crystal, S. M. Genensky and G. F. Newell—486

Thermoluminescence

Second-order decay of the thermoluminescence of polycrystalline materials, Peter K. Weyl—547

Transport Phenomena

Heat conductivity in polyatomic or electronically excited gases. II, Joseph O. Hirschfelder—282
Heat transfer in chemically reacting mixtures. I, Joseph O. Hirschfelder—274
Kinetic theory of non-spherical molecules. II, C. F. Curtiss and Charles Muckenfuss—1619
Quantum-mechanical effects in gas dynamics, E. V. Laitone—1560
Regression of fluctuations, Marshall Fixman—1421
Relaxation of vibrational nonequilibrium distributions. III. The effect of radiative transitions on the relaxation behavior, Robert J. Rubin and Kurt E. Shuler—137
Role of collision transfer in fluorescent solutions, R. Hardwick—323
Thermal conductivity of gas mixtures in chemical equilibrium, James N. Butler and Richard S. Brokaw—1636

Transport Phenomena (continued)
Thermodynamic and transport properties of the system iso-octane and perfluoroheptane, Charles R. Mueller and James E. Lewis—286

Turbidity

Ultrasonics
Dispersion and absorption of sound in liquids in general chemical equilibrium and its application to chemical kinetics, Daisaku Tabuchi—993
Effects of pressure on ultrasonic relaxation in liquids, T. A. Litovitz, E. H. Carnevale, and P. A. Kendall—465
Lattice dynamics of hexagonal close-packed metals, L. J. Slutsky and C. W. Garland—787
Sound dispersion in halo-methane mixtures, Robert Amme and Sam Legvold—514
Theory of ultrasonic thermal relaxation times in liquids, Theodore A. Litovitz—469

Valence and Chemical Bond
Chemical bond: a one-dimensional, square well-type model, Gordon M. Barrow—558
Crystal and molecular structures of heterocyclic compounds. III. α-Penazine near 80°K, F. L. Hirschfeld and G. M. J. Schmidt—923
Derivation of an internuclear potential function from a quantum mechanical model, Ellis R. Lippincott—1678
Effect of hydrogen bonding on the near ultraviolet absorption of naphthol, S. Nagakura and M. Gouterman—881
Electronic structure of the BH molecule, Kimio Ohno—1754(L)
Flexibility of chemical bond as revealed by the rocking frequencies in ethylene, Takehiko Shimanouchi—594
Interrelations of quantum-mechanical quantities concerning chemical reactivity of conjugated molecules, Kenichi Fukui, Teijiro Yonezawam, and Chikayishi Nagata—831

$(CH_3)_3CCN$, T. Sparstad and E. Amble—317(L)
CO^{17}, B. Rosenblum and A. H. Nethercot, Jr.—828(L)
Formamide, Robert J. Kurland and E. Bright Wilson, Jr. —585
Methylallene, David R. Lide, Jr. and D. E. Mann—874
Methyl silane, R. W. Kilb and Louis Pierce—108
NH_3, Harold Feeny, Walter Madigowsky, and B. Winters —898
Propylene, David R. Lide, Jr., and D. E. Mann—868
Propylene oxide, Jerome D. Swalen and Dudley R. Herschbach—100
trans-Fluoro-propylene, Seymour Siegel—989(L)
Of Crystals
Alkali chloroiodides, C. D. Cornwell and R. S. Yamasaki —1060
Alkali halides, Herbert H. Hersh—1330
α-quartz, Darwin L. Wood—1438(L)
$CO^{16}O^{18}$, D. F. Eggers, Jr., and C. B. Arends—1405
Crystals, Robert A. Satten—286
Gd^{+++}, S. P. Cook and G. H. Dieke—1213(L)
HCl, G. L. Hiebert and D. F. Hornig—1216(L)
H_2S and D_2S, F. P. Reding and D. F. Hornig—1024
HX–DX mixed crystals, D. F. Hornig and G. L. Hiebert —752
$KAu(CN)_2$, Llewellyn H. Jones—468
n-Paraffins, Robert G. Snyder—969(L)
Nitrite ion, Ralph E. Weston, Jr., and Thomas F. Brodasky—683
Quinones, Jerome W. Sidman—820(L)
Rochelle salt, A. N. Baker and D. S. Webber—689
Solids. II, Herbert B. Rosenstock—1194
SrS, G. Cheroff, M. Okrasinski, and S. P. Keller—330(L)
Visible or Ultraviolet of
Alkali halide molecules, R. Stephen Berry—1288
Alkali halides, Herbert H. Hersh—1330
Allyl system, H. D. Hunt, D. L. Peterson, and W. T. Simpson—20
$B^{11}F$, Ryumyo Onaka—374
Benzene, Lionel Goodman and Harrison Shull—1388
Carbonium ions, A. A. Verrijn Stuart and E. L. Mackor—826(L)
Carbonyl group, Jerome W. Sidman—429
C–N double bond, Ernst Fischer and Yael Frei—808(L)
Chloroammine cobalt (III) complexes, Kazuo Nakamoto, Junnosuke Fujita, Masahisa Kobayashi, and Ryutaro Tsuchida—439
Chlorocyclopropane, Elspeth C. Eberlin and Lucy W. Pickett—1439(L)
Chromophoric groups, Anneliese Wenzel—331(L)
Formaldehyde, J. A. Pople and J. W. Sidman—1270
Gd^{+++}, S. P. Cook and G. H. Dieke—1213(L)
Irradiated bianthrone and spiropyran compounds, Yehuda Hirshberg—758
Lithium fluoride, Frederick F. Morehead and Farrington Daniels
Metal ammonia, Joshua Jortner—823(L)
Nitric oxide, Walter R. Thorson and Richard M. Badger —609
Nitrogen dioxide, G. Wilse Robinson, Maclyn McCarty, Jr., and Mary C. Keelty—972(L)
Nonpolar molecules, H. C. Longuet-Higgins and J. A. Pople—192
Organic free radicals, K. H. Hausser and J. N. Murrell—500
Paracyclophanes, Lloyd L. Ingraham—1228(L)
Polyatomic molecules, K. Dressler and D. A. Ramsay—971(L)
Porphyrins, Gilbert R. Seely—125
Quinones, Jerome W. Sidman—820(L)
Radicals in the shock tube, Charles E. Campbell and Irving Johnson—316(L)
SrS single crystals, G. Cheroff, M. Okrasinski, and S. P. Keller—330(L)

Adsorption (see Surface Phenomena)
Apparatus and Methods
Asymmetric rotors, G. Wilse Robinson—1227(L)
Calibration of prism spectrometers from 1300–2100 cm^{-1}, Llewellyn H. Jones—1229(L)
Computation of rigid asymmetric rotator constants from energy moments, L. Carlton Brown and Paul M. Parker—1108

Apparatus and Methods (continued)
Evaluation of molecular quadrupole moments from microwave line breadths. II. Experimental, Harold Feeny, Walter Madigowsky, and B. Winters—898
Exploding wire as a light source in flash photolysis, Gisela K. Oster and R. A. Marcus—189
Improved method of calculating reaction rate constants for free radicals, Robert F. Sweeny—987(L)
Sodium diffusion flame method for fast reactions. The use of a spherical source, John F. Reed and B. S. Rabinovitch—988(L)
Table of coefficients for the energy levels of a near symmetric top, Richard H. Schwendeman—986(L)
Tables of Mathieu integrals for the internal rotation problem, Dudley R. Herschbach—975(L)
Vapor pressures and vapor densities from direct weighings of Knudsen cells, John L. Margrave—1412(L)

Catalysis
Combined catalysts as revealed by electron diffraction, S. Yamaguchi—1114
Halogen-catalyzed decomposition of N_2O and the role of the hypohalite radical, Sidney W. Benson and Jerry H. Buss—1382
Possibility of enhanced catalytic reactions, Manfred J. D. Low—979(L)

Chemical Reactions (see Kinetics of Reactions)

Conductance
Oxygen sorption phenomena on cadmium selenide crystals, Richard H. Bube—496
Plasma augmentation of the surface conductivity of glasses, R. G. Fowler and M. Sakuntala—824(L)
Properties of the interstitial compounds of graphite. IV. Properties of *N*-type compounds, Marceline L. Dzurus and Gerhart R. Hennig—275
Soret effect in doped ionic crystals, R. E. Howard—1377

Crystal Growth
Crystal growth of silver metal. Mechanism and kinetics, Welby G. Courtney
Electrodeposition onto metal whiskers, D. A. Vermilyea—814(L)
Photoconductivity of anthracene. III. D. M. J. Compton, W. G. Schneider, and T. C. Waddington—160
Rate of growth of ice crystals in supercooled water, C. S. Lindenmeyer, G. T. Orrok, K. A. Jackson, and B. Chalmers—822(L)
Use of the Nernst equation in the theory of electrolytic crystal growth, D. A. Vermilyea—822(L)

Crystalline State
Adsorption of nickel on molybdenum in the field emission microscope, E. C. McIrvine and R. C. Bradley—646
B—Cl distance in boron trichloride, Masao Atoji and William N. Lipscomb—195
Bulk density of separated lithium isotopes, D. D. Snyder and D. J. Montgomery—1033
Chemical etches and etch pit patterns on PbS crystals, R. F. Brebrick and W. W. Scanlon—607
Cl^{35} pure quadrupole resonance studies of relaxation times in solid solutions of *p*-dichlorobenzene, D. E. Woessner and H. S. Gutowsky—1072
Compressions and solid phases of CO_2, CS_2, COS, O_2, and CO, Richard Stevenson—673
Crystal and molecular structure of B_2H_{12}, Richard E. Dickerson, Peter J. Wheatley, Peter A. Howell, and William N. Lipscomb—200
Crystal and molecular structure of diboron tetrachloride, B_2Cl_4, Masao Atoji, Peter J. Wheatley, and William N. Lipscomb—196
Crystal growth of silver metal. Mechanism and kinetics, Welby G. Courtney—1349
Crystal structure of alpha-plutonium metal, W. H. Zachariasen and Finley Ellinger—811(L)
Crystalline field selection rules: The effect of vibration-electronic interaction, Robert A. Satten—286
Crystallographic and magnetochemical studies on ABO_3 group compounds of lanthanon and manganese oxides, R. C. Vickery and Ardys Klann—1161
Defects on a dipole lattice, A. Isihara—1174
Dielectric losses of doped colored crystals, G. Jacobs—217
Dielectric relaxation in CaF_2 single crystals, G. Jacobs—1441(L)
Drude-model calculation of dispersion forces. I. General theory, W. L. Bade—1280
Drude-model calculation of dispersion forces. II. The linear lattice, W. L. Bade and John G. Kirkwood—1284
Effect of pressure on CN^- dissolved in an alkali halide lattice, T. E. Slykhouse and H. G. Drickamer—1226(L)
Electronic band structure of boron carbide, Masatoshi Yamazaki—746
Entropy, heat capacity, and heats of transition of 1,2,4-trimethylbenzene, William E. Putnam and John E. Kilpatrick—1075
Fluorescent lifetimes of rare earth salts and ruby, G. H. Dieke and L. A. Hall—465
Growth and optical absorption of SrS single crystals, G. Cheroff, M. Okrasinski, and S. P. Keller—330(L)
Hydrogen vibration spectra of Rochelle salt, A. N. Baker and D. S. Webber—689
Infrared absorption bands in α-quartz, Darwin L. Wood—1438(L)
Infrared spectrum and force constants of the nitrite ion, Ralph E. Weston, Jr., and Thomas F. Brodasky—683
Intramolecular and intermolecular coupling of CH_2 rocking modes in *n*-paraffins, Robert G. Snyder—969(L)
Lattice constants of separated lithium isotopes, E. J. Covington and D. J. Montgomery—1030
Lattice of partly permanent dipoles, R. A. Toupin and M. Lax—458
Least squares refinements of $B_{10}H_{14}$, B_4H_{10}, and B_5H_{11}, Emmett B. Moore, Jr., Richard E. Dickerson and William N. Lipscomb—209
Line width of the pure quadrupole resonance of bromine in $KBrO_3$, Yoshitaka Koi, Akira Tsujimura, and Yoshiro Imaeda—603(L)
Magnetic and electric properties of vanadium trioxide, S. Teranishi and K. Tarama—1217(L)
Magnetic susceptibilities of some Pu^{+4} compounds, W. Burton Lewis and Norman Elliott—904
Magnetic susceptibilities of uranium (IV) ions in cubic crystalline fields, Clyde A. Hutchison, Jr., and George A. Candela—707
Magnetic susceptibilities of vanadates of neodymium and praseodymium, R. C. Vickery and Ardys Klann—1219(L)
Magnetic susceptibility of titanium (III) in lanthanum titanium oxides, Carl W. Moeller—983(L)
Mechanical resonance dispersion in crystalline polymers at audio-frequencies, Edwin R. Fitzgerald—1180
Mechanism of luminescence in the ZnF_2: Mn phosphor, Peter D. Johnson and Farren H. Smith—600(L)
Misassignment, by J. W. Sidman, of the electronic spectra of the quinones, Jerome W. Sidman—820(L)
Molecular structure of *bis*-[Cyclopentadienyl molybdenum tricarbonyl], Frank C. Wilson and David P. Shoemaker—809(L)
Nonstoichiometry and lattice defects in uranium hydride, George G. Libowitz—514
Nuclear magnetic relaxation in polytetrafluoroethylene and polyethylene, C. W. Wilson, III, and G. E. Pake—115

Nuclear magnetic resonance study of liquid crystal transitions, W. R. Runyan and A. W. Nolle—1081
Nuclear quadrupole coupling in the alkali chloroiodides. I. Chlorine resonances, C. D. Cornwell and R. S. Yamasaki—1060
Nuclear relaxation by the hyperfine interaction with the ion core spins in ferromagnetic and antiferromagnetic crystals, A. H. Mitchell—17
Optical properties of solids. II, Herbert B. Rosenstock—1194
Oxygen sorption phenomena on cadmium selenide crystals, Richard H. Bube—496
Paramagnetic resonance in trivalent transition metal complexes, H. S. Jarrett—1298
Photoconductivity of anthracene. III, D. M. J. Compton, W. G. Schneider, and T. C. Waddington—160
Preparation and magnetic properties of pyrochlore-type titanates of neodymium and praseodymium, R. C. Vickery and Ardys Klann—1220(L)
Properties of the interstitial compounds of graphite. IV. Properties of *N*-type compounds, Marceline L. Dzurus and Gerhart R. Hennig—275
Rate of growth of ice crystals in supercooled water, C. S. Lindenmeyer, G. T. Orrok, K. A. Jackson, and B. Chalmers—822(L)
Role of crystal edges in evaporation, Gerald W. Sears—1308
Semitopological approach to boron-hydride structures, Richard E. Dickerson and William N. Lipscomb—212
^6P state of the Gd^{+++} ion, S. P. Cook and G. H. Dieke—1213(L)
Solid methane—changes in phase under pressure, Richard Stevenson—656
Solubility of lithium in silicon, C. S. Fuller and H. Reiss—318(L)
Soret effect in doped ionic crystals, R. E. Howard—1377
Space group of tellurium and selenium, Robert H. Asendorf—11
Structure and molecular interaction in HX–DX mixed crystals, D. F. Hornig and G. L. Hiebert—752
Structure of the interhalogen compounds. II. Iodine heptafluoride at −110°C and at −145°C, Robinson D. Burbank and Frank N. Bensey, Jr.—981(L)
Structure of the interhalogen compounds. III. Concluding note on bromide trifluoride, bromine pentafluoride, and iodine pentafluoride, Robinson D. Burbank and Frank N. Bensey, Jr.—982(L)
Structure of tellurium oxide glass, George W. Brady—300
Structure of the disordered phase of HCl, G. L. Hiebert and D. F. Hornig—1216(L)
Studies of color centers in polycrystalline compressed pellets of alkali halides, Herbert H. Hersh—1330
Study of the wurtzite-type binary compounds. II. Macroscopic theory of the distortion and polarization, F. Keffer and A. M. Portis—675
Technique to produce free radicals in the solid state, Harold A. Papazian—813(L)
Thermodynamic consistency of data on AgBr, A. W. Lawson—598(L)
Thermodynamics for elastic solids in the electrostatic field. I. General formulation, James C. M. Li and Tsuan Wu Ting—693
Thermoluminesence and coloration of lithium fluoride produced by alpha particles, electrons, gamma rays, and neutrons, Frederick F. Morehead and Farrington Daniels—1318
Tunneling through high periodic barriers. II. Application to nuclear magnetic resonance in solids, T. P. Das—763
Use of the Nernst equation in the theory of electrolytic crystal growth, D. A. Vermilyea—822(L)
Vibration spectrum of graphite and boron nitride. II. The three-dimensional spectrum, Gordon F. Newell—240
Vibrational spectra of molecules and complex ions in crystals. X. H_2S and D_2S, F. P. Reding and D. F. Hornig—1024
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. II. $KAu(CN)_2$, Llewellyn H. Jones—468
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. III. $Hg(CN)_2$, Llewellyn H. Jones—665

Crystal Structure

B–Cl distance in boron trichloride, Masao Atoji and William N. Lipscomb—195
Crystal and molecular structure of B_5H_{11}, Richard E. Dickerson, Peter J. Wheatley, Peter A. Howell, and William N. Lipscomb—200
Crystal and molecular structure of diboron tetrachloride, B_2Cl_4, Masao Atoji, Peter J. Wheatley, and William N. Lipscomb—196
Crystal structure of alpha-plutonium metal, W. H. Zachariasen and Finley Ellinger—811(L)
Effect of pressure on CN^- dissolved in an alkali halide lattice, T. E. Slykhouse and H. G. Drickamer—1226(L)
Electronic band structure of boron carbide, Masatoshi Yamazaki—746
Hydrogen vibration spectra of Rochelle salt, A. N. Baker and D. S. Webber—689
Lattice constants of separated lithium isotopes, E. J. Covington and D. J. Montgomery—1030
Least squares refinements of $B_{10}H_{14}$, B_4H_{10}, and B_8H_{11}, Emmett B. Moore, Jr., Richard E. Dickerson and William N. Lipscomb—209
Molecular structure of *bis*-[Cyclopentadienyl molybdenum tricarbonyl], Frank C. Wilson and David P. Shoemaker—809(L)
Semitopological approach to boron-hydride structures, Richard E. Dickerson and William N. Lipscomb—212
Structure of the disordered phase of HCl, G. L. Hiebert and D. F. Hornig—1216(L)
Structure of the interhalogen compounds. II. Iodine heptafluoride at −110°C and at −145°C, Robinson D. Burbank and Frank N. Bensey, Jr.—981(L)
Structure of the interhalogen compounds. III. Concluding note on bromine trifluoride, bromine pentafluoride, and iodine pentafluoride, Robinson D. Burbank and Frank N. Bensey, Jr.—982(L)
Structure of Roussin's black salt, Georg Johansson and William N. Lipscomb—1417(L)
Structure of tellurium oxide glass, George W. Brady—300
Vibrational spectra and structure of phosphonium and deutero-phosphonium iodides, J. V. Martinez and E. L. Wagner—1110
Vibrational spectra of molecules and complex ions in crystals. X. H_2S and D_2S, F. P. Reding and D. F. Hornig—1024

Detonation (see also Shock Waves)

Characteristic equations for reactive flow, W. W. Wood and J. G. Kirkwood—596(L)
Investigations of the detonation properties of condensed explosives with equations of state based on intermolecular potentials. I. RDX with fixed product composition, W. Fickett, W. W. Wood, and Z. W. Salsburg—1324
Measurement of Chapman-Jouguet pressure for explosives, W. E. Deal—796
Sound speed, E. L. Resler, Jr.—596(L)

Deuterium (see Isotopes)

Dielectrics

Defects on a dipole lattice, A. Isihara—1174

Dielectric dispersion in viscous polar liquids, J. W. Winslow, Jr., R. J. Good, and P. E. Berghausen—309

Dielectric dispersion of boric acid in water. The rate of recombination of H^+ and $H_2BO_3^-$ at 35°C, W. R. Gilkerson—914

Dielectric loss of and defects in clay minerals, J. Van Keymeulen and W. Dekeyser—172

Dielectric losses of doped colored crystals, G. Jacobs—217

Dielectric properties of polyethylene glycols at microwave frequencies, Naokazu Koizumi—625

Dielectric properties of some liquid alkyl halides, Donald J. Denney—259

Dielectric relaxation in CaF_2 single crystals, G. Jacobs—1441(L)

Dipole moment of perchloryl fluoride, A. A. Maryott and S. J. Kryder—1221(L)

Electric quadrupole moments and dielectric constants, A. D. Buckingham and J. A. Pople—820(L)

Electric quadrupole moments and dielectric constants, Robert W. Zwanzig—821(L)

Induced polarization and dielectric constant of polar liquids, Robert H. Cole—33

Influence of external treatments on electret behavior, Jack W. Wild and J. D. Stranathan—1055

Lattice of partly permanent dipoles, R. A. Toupin and M. Lax—458

Low-temperature dielectric absorption in polymethyl methacrylate, D. J. Scheiber and D. J. Mead—326(L)

Study of the wurtzite-type binary compounds. II. Macroscopic theory of the distortion and polarization, F. Keffer and A. M. Portis—675

Theory of the dielectric constant of imperfect cases and dilute solutions, Terrell L. Hill

Diffusion

Chemical etches and etch pit patterns on PbS crystals, R. F. Brebrick and W. W. Scanlon—607

Concentration dependence of diffusion coefficient: Analysis of skewed diffusion curve, Yasunori Nishijima and Gerald Oster—269

Diffusion coefficients of the systems Xe-Xe and A-Xe, I. Amdur and T. F. Schatzki—1049

Dispersion of soluble matter in flow through granular media, Mark Jay Beran—270

Free diffusion: diffusion coefficient varying exponentially with concentration, David M. Clarke—29

Higher approximations for the transport properties of binary gas mixtures. I. General formulas, Edward A. Mason—75

Higher approximations for the transport properties of binary gas mixtures. II. Applications, Edward A. Mason—782

Kinetic study of the oxidation of uranium dioxide, S. Aronson, R. B. Roof, Jr., and J. Belle—137

Validity of Nernst-Einstein and Stokes-Einstein relationships in molten $NaNO_3$, Ling Yang—601(L)

Dipole Moment

Dipole moment of perchloryl fluoride, A. A. Maryott and S. J. Kryder—1221(L)

Dipole moment of the molecular complex between triethylamine and iodine, Hiroshi Tsubomura and Saburo Nagakura—819(L)

Internal barrier of propylene oxide from the microwave spectrum. I., Jerome D. Swalen and Dudley R. Herschbach—100

Microwave spectrum, structure, dipole moment, and quadrupole coupling constants of formamide, Robert J. Kurland and E. Bright Wilson, Jr.—585

Microwave spectrum and barrier to internal rotation for *trans*-fluoro-propylene, Seymour Siegel—989(L)

Nonresonant absorption of symmetric top molecules. Shape of the nonresonant spectra, George Birnbaum—360

Nuclear quadrupole interaction in boron compounds, T. P. Das—1

Range of validity of Higashi's equation for a quick determination of dipole moment in solution, Bal Krishna and K. K. Srivastava—835

Vibrational intensities. VIII. CH_3 and CD_3 chloride, bromide, and iodide, A. D. Dickson, I. N. Mills, and Bryce Crawford, Jr.—445

Electrochemistry

Electrodeposition onto metal whiskers, D. A. Vermilyea—814(L)

Mechanism of electrolytic silver deposition and dissolution, W. Mehl and J. O'M. Bockris—818(L)

Standard electrode potential of the silver, silver chloride electrode, E. Lee Purlee and Ernest Grunwald—990(L)

Use of the Nernst equation in the theory of electrolytic crystal growth, D. A. Vermilyea—822(L)

Electron Diffraction

Combined catalysts as revealed by electron diffraction, S. Yamaguchi—1114

Isotope effect on the mean-square amplitude, Katsumi Kimura—1213(L)

Magnetic analysis of alloys by electron diffraction, S. Yamaguchi—1310

Molecular structure of tropone, Katsumi Kimura, Satoshi Suzuki, Masao Kimura, and Masaji Kubo—320(L)

Reinvestigation of the molecular structure of 1,3,5,7-cyclooctatetraene by electron diffraction, O. Bastiansen, and Lise Hedberg and Kenneth Hedberg—1311

Structure of gaseous chloropicrin as determined by electron diffraction, W. M. Barss—1260

Emission Spectra

C_3 and CN emission in the shock tube, G. Charatis, L. R. Doherty, and T. D. Wilkerson—1415(L)

Emission of radiation by a hot gas: Effect of vibrational-translational energy exchange, David A. Dows—1430(L)

Lewis-Rayleigh nitrogen afterglow, G. B. Kistiakowsky and Peter Warneck—1417(L)

Measurement of the vibrational relaxation time of CO behind a shock wave by infrared emission, M. W. Windsor, Norman Davidson, and Ray Taylor—315(L)

Modifications of the Rb emission spectrum due to atomic interactions, Oleg Jefimenko and Waldo Curtis—953

Spectroscopic study of electronic flame temperatures and energy distributions, Herbert P. Broida and Kurt E. Shuler—933

Ultraviolet spectrum of air at 5750°K, W. H. Wurster and H. S. Glick—1218(L)

Equation of State

Compressibility of gases. II. Mixtures of carbon dioxide and helium at 30°C, Robert C. Harper, Jr., and John G. Miller—36

Investigations of the detonation properties of condensed explosives with equations of state based on intermolecular potentials. I. RDX with fixed product composition, W. Fickett, W. W. Wood, and Z. W. Salsburg—1324

Monte Carlo equation of state of molecules interacting with the Lennard-Jones potential. I. A supercritical isotherm at about twice the critical temperature, W. W. Wood and F. R. Parker—720

Preliminary results from a recalculation of the Monte Carlo equation of state of hard spheres, W. W. Wood and J. D. Jacobson—1207(L)

Errata

Dipole moment of lithium hydride [J. Chem. Phys. **26**, 1092 (1957)], R. P. Hurst, James Miller and F. A. Matsen—1424(L)

Displacement of the maximum in the concentration-time diagram of uni-bi, bi-uni, and bi-bimolecular consecutive reactions. [J. Chem. Phys. **26**, 75 (1957)], M. Talât-Erben—1424(L)

Dissociation energies of carbon monoxide and nitrogen from reflected shock wave studies, J. P. Toennies and E. F. Greene—981(L)

Electronic spectrum and dissociation energy of fluorine [J. Chem. Phys. **26**, 1567 (1957)], A. L. G. Rees—1424(L)

Entropy requirements of the Hammett relationship, John E. Leffler—981(L)

Molecular composition of alkali halide vapors, R. C. Miller and P. Kusch—981(L)

Polarization of anthracene crystal fluorescence, J. Ferguson and W. G. Schneider—599(L)

Radiolysis of mixtures: Cyclohexane-benzene-iodine, M. Burton, J. Chang, S. Lipsky, and M. P. Reddy—823(L)

Raman spectra, vibrational assignments, and force constants for BH_3CO and BD_3CO, Robert C. Taylor—979(L)

Statistical mechanics of liquid-vapor equilibrium, B. Widom—980(L)

Structural investigation of $SnBr_4$ by means of nuclear quadrupole resonance, Kenji Shimomura—599(L)

Theory of internal over-all rotational interactions. III. Nonrigid asymmetric rotors, Daniel Kivelson—980(L)

Theory of the interaction of internal rotation with over-all rotations. I. Symmetric rotors: methyl silane, Daniel Kivelson—980(L)

Transport processes in multicomponent liquids [J. Chem. Phys. **27**, 791 (1957)], Benson R. Sundheim—1424(L)

Films (see Surface Phenomena)

Flames

Burning of a liquid droplet. III. Conductive heat transfer within the condensed phase during combustion, Henry Wise and C. M. Ablow—389

Burning of a liquid droplet. IV. Combustion inhibition in a fuel-oxidizer system, Bernard J. Wood, Henry Wise, and Willis A. Rosser—807(L)

Influence of hydrogen and deuterium on flame velocities of dry carbon monoxide-oxygen mixtures, Leland A. Watermeier—1118

Infrared spectrum of the two-stage cool flame of acetaldehyde, Russell E. Donovan—324(L)

Ion recombination rates in methane-air flames, I. R. King—817(L)

Sodium diffusion flame method for fast reactions. The use of a spherical source, John F. Reed and B. S. Rabinovitch—988(L)

Spectroscopic study of electronic flame temperatures and energy distributions, Herbert P. Broida and Kurt E. Shuler—933

Thermodynamic functions of carbonyl chloride, John S. Gordon and David Goland—1223(L)

Fluorescence

Characteristics of plastic scintillators, Louis J. Basile—801

Discrimination between "radiative" and "nonradiative" transfer of molecular excitation energy in liquid systems, A. Weinreb—133

Fluorescence intensity ratio of sodium doublet observed in the optical dissociation of sodium iodide vapor, Howard G. Hanson—491

Fluorescence of naphthalene and anthracene vapors under β-ray excitation, Allan Shepp—816(L)

Fluorescence spectra of uranium, neptunium and curium, John G. Conway, James C. Wallmann, B. B. Cunningham, and George V. Shalimoff—1416(L)

Fluorescent lifetimes of rare earth salts and ruby, G. H. Dieke and L. A. Hall—465

Free Rotation (see Rotational Isomerism)

Gases

Application of the series method of imperfect gas theory to other problems in statistical mechanics, Terrell L. Hill—561

Bose-Einstein gas in a gravitational field, H. A. Gersch—928

Compressibility of gases. II. Mixtures of carbon dioxide and helium at 30° C, Robert C. Harper, Jr., and John G. Miller—36

Diffusion coefficients of the systems Xe-Xe and A-Xe, I. Amdur and T. F. Schatzki—1049

Emission of radiation by a hot gas: Effect of vibrational-translational energy exchange, David A. Dows—1430(L)

Equations for a lattice gas. II. Multi-component systems, Howard B. Levine—335

Formulas for thermal conductivity of ternary gas mixtures, B. N. Srivastava and S. C. Saxena—583

Free energy functions for 54 gaseous elements, Harwood G. Kolsky, Ruth M. Gilmer, and Paul W. Gilles—494

Higher approximations for the transport properties of binary gas mixtures. I. General formulas, Edward A. Mason—75

Higher approximations for the transport properties of binary gas mixtures. II. Applications, Edward A. Mason—782

Inelastic molecular collisions with a Maxwellian interaction energy, B. Widom—940

Note on the canonical ensemble for the ideal Einstein-Bose gas, J. Ford and T. H. Berlin—931

Potential parameters for krypton, M. P. Madan—113

Preliminary results from a recalculation of the Monte Carlo equation of state of hard spheres, W. W. Wood and J. D. Jacobson—1207(L)

Theory of multicomponent fluid mixtures. II. A corresponding states treatment, Peter J. Wojtowicz, Zevi W. Salsburg, and John G. Kirkwood—505

Thermodynamic properties of the gaseous alkali halides, Stuart A. Rice and William Klemperer—643

Transport phenomena in a dense gas of rigid spheres, John S. Dahler—1428(L)

Vibrational relaxation times in nitrogen, S. J. Lukasik and J. E. Young—1149

Glasses

Plasma augmentation of the surface conductivity of glasses, R. G. Fowler and M. Sakuntala—824(L)

Structure of tellurium oxide glass, George W. Brady—300

Temperature coefficient of surface tension of molten glasses, R. F. Kruh and A. B. Bestul—319(L)

Heat Capacity (see Thermodynamic Properties)
High Pressures
Asymptotic relations in the Thomas-Fermi-Dirac atom model, J. J. Gilvarry—150
Compressions and solid phases of CO_2, CS_2, COS, O_2, and CO, Richard Stevenson—673
Effect of pressure on CN^- dissolved in an alkali halide lattice, T. E. Slykhouse and H. G. Drickamer—1226(L)
Monte Carlo equation of state of molecules interacting with the Lennard-Jones potential. I. A supercritical isotherm at about twice the critical temperature, W. W. Wood and F. R. Parker—720
Solid methane—changes in phase under pressure, Richard Stevenson—656
Stretching vibrations in condensed systems: especially bonds containing hydrogen, A. M. Benson, Jr., and H. G. Drickamer—1164
Hindered Rotation (See Rotation)

Infrared Spectra (see Absorption Spectra)
Intensities of Spectra
Effect of change in moment of inertia on the intensity distribution in P and R branches of $C_{\infty v}$ molecules, G. A. Gallup—1338
Infrared intensities and bond moments of $CO^{16}O^{18}$, D. F. Eggers, Jr., and C. B. Arends—1405
Infrared intensity of the C—H stretching band of chloroform in some halogenated acetones, R. E. Kagarise—827(L)
Intensities of rotation lines in absorption bands, H. Hanson, H. H. Nielsen, W. H. Shaffer, and J. Waggoner—40
Raman and infrared intensities in the vibrational spectra of hydrocarbons. I. Skeletal vibrations of straight zigzag chains, Otto H. Theimer—408
Vibrational intensities. VIII. CH_3 and CD_3 chloride, bromide, and iodide, A. D. Dickson, I. M. Mills, and Bryce Crawford, Jr.—445
Vibrational intensities in halogenated methanes. III. The interpretation of solution data, William C. Mallard and Joseph W. Straley—877
Isotopes
Adsorption and diffusion of hydrogen on nickel, R. Wortman, R. Gomer, and R. Lundy—1099
Exchange of ammonia between metal-ammine cations and solvent in liquid ammonia, Hans U. D. Wiesendanger, Walter H. Jones, and Clifford S. Garner—668
Fractionation of oxygen isotopes in the formation of oxide films on copper, John B. Brown, Malcolm Dole, and G. A. Lane—251
Isotopic exchange reactions. The halogen exchange between $SiCl_4$ and HCl, Rolfe H. Herber—653
Kinetics of complex isotopic exchange reactions, D. F. Abell, N. A. Bonner, and W. Goishi—658
Operation of a center-fed continuous-flow thermogravitational column with unequal flow rates in the two column sections. Comparison of theory and experiment, John E. Powers and C. R. Wilke—1000
Isotope Effects
Bulk density of separated lithium isotopes, D. D. Snyder and D. J. Montgomery—1033
Fluorescence of naphthalene and anthracene vapors under β-ray excitation, Allan Shepp—816(L)
Fundamental of $N^{15}O$, W. H. Fletcher and G. M. Begun—579
Infrared intensities and bond moments of $CO^{15}O^{18}$, D. F. Eggers, Jr., and C. B. Arends—1405
Infrared spectra and vibrational assignment of monomeric formic acid, Roger C. Millikan and Kenneth S. Pitzer—1305
Infrared spectra of $N^{15}H_3$ and $N^{15}H_4^+$, H. W. Morgan, P. A. Staats, and J. H. Goldstein—1212(L)
Infrared spectrum of NT_4Cl, H. W. Morgan, P. A. Staats, and J. H. Goldstein—1212(L)
Isotope effect on the mean-square amplitude, Katsumi Kimura—1213(L)
Isotope effects on thermodynamic functions of hindered rotators, W. H. Stockmayer—321(L)
Lattice constants of separated lithium isotopes, E. J. Covington and D. J. Montgomery—1030
Microwave spectrum and barrier to internal rotation of acetic acid, William J. Tabor—974(L)
Microwave spectrum, structure, and internal barrier of methyl silane, R. W. Kilb and Louis Pierce—108
Nonideality of liquid ortho-parahydrogen solutions, Harold L. Friedman—220
Spin exchange in a biradical, D. C. Reitz and S. I. Weissman—968(L)
Valence-bond interpretation of electron coupled proton-proton magnetic interactions measured via deuterium substitution, Martin Karplus, D. H. Anderson, T. C. Farrar, and H. S. Gutowsky—597(L)
Vibrational intensities. VIII. CH_3 and CD_3 chloride, bromide, and iodide, A. D. Dickson, I. N. Mills, and Bryce Crawford, Jr.—445

Kinetics of Reaction
Burning of a liquid droplet. III. Conductive heat transfer within the condensed phase during combustion, Henry Wise and C. M. Ablow—389
Burning of a liquid droplet. IV. Combustion inhibition in a fuel-oxidizer system, Bernard J. Wood, Henry Wise, and Willis A. Rosser—807(L)
Characteristic equations for reactive flow, W. W. Wood and J. G. Kirkwood—596(L)
Chemical effects of hot atoms, Louis Monchick, Koichi Funabashi, and John L. Magee—734
Comment on letter by N. Davidson and G. L. Schott, P. G. Ashmore and B. P. Levitt—318(L)
Cross sections of certain charge transfer reactions, S. N. Ghosh and W. F. Sheridan—1436(L)
Decomposition of nitric oxide and nitrogen dioxide by the impact of fission fragments of uranium-235, P. Harteck and S. Dondes—546
Dielectric dispersion of boric acid in water. The rate of recombination of H^+ and $H_2BO_3^-$ at 35°C, W. R. Gilkerson—914
Exchange of ammonia between metal-ammine cations and solvent in liquid ammonia, Hans U. D. Wiesendanger, Walter H. Jones, and Clifford S. Garner—668
Excitation of nitric oxide by active nitrogen, Frederick Kaufman and John R. Kelso—1209(L)
Fractionation of oxygen isotopes in the formation of oxide films on copper, John B. Brown, Malcolm Dole, and G. A. Lane—251
Halogen-catalyzed decomposition of N_2O and the role of the hypohalite radical, Sidney W. Benson and Jerry H. Buss—1382
Hydrogen bonding in radical reactions. Some remarks on CF_3 radicals, M. Szwarc and J. Smid—421
Hydrogen yields in aqueous sodium nitrate solution by cobalt-60 gamma ray radiation, H. A. Mahlman and J. W. Boyle—1434(L)
Improved method of calculating reaction rate constants for free radicals, Robert F. Sweeny—987(L)
Influence of hydrogen and deuterium on flame velocities of dry carbon monoxide-oxygen mixtures, Leland A. Watermeier—1118

Infrared spectrum of the two-stage cool flame of acetaldehyde, Russell E. Donovan—324(L)
Ion recombination rates in methane-air flames, I. R. King—817(L)
Isoaffine reactions, C. A. Hollingsworth and Robert L. Potter—896
Isotopic exchange reactions. The halogen exchange between $SiCl_4$ and HCl, Rolfe H. Herber—653
Kinetic frequency factor calculations, Arthur E. Axworthy, Jr., and Sidney W. Benson—976(L)
Kinetic study of the oxidation of uranium dioxide, S. Aronson, R. B. Roof, Jr., and J. Belle—137
Kinetics and equilibria of complex reactions, C. A. Hollingsworth—1346
Kinetics of complex isotopic exchange reactions, D. F. Abell, N. A. Bonner, and W. Goishi—658
Lewis-Rayleigh nitrogen afterglow, G. B. Kistiakowsky and Peter Warneck—1417(L)
Mechanism of electrolytic silver deposition and dissolution, W. Mehl and J. O'M. Bockris—818(L)
Photochemical formation of nitrous oxide, W. E. Groth and H. Schierholz—973(L)
Photochemical studies in flash photolysis. I. Photolysis of acetone, Gisela K. Oster and R. A. Marcus—472
Photolysis of water vapor, Mei Chio Chen and H. Austin Taylor—857
Possibility of enhanced catalytic reactions, Manfred J. D. Low—979(L)
Radiation chemistry of solid paraffins, A. I. Snow and H. C. Moyer—1222(L)
Radiolysis of solid nitrates, C. J. Hochanadel and T. W. Davis—333(L)
Rate constants at low concentrations. III. Atomic oxygen reactions in the photolysis of nitrogen dioxide at 3660 A, Hadley W. Ford and Noboru Endow—1156
Rate constants at low concentrations. IV. Reactions of atomic oxygen with various hydrocarbons, Hadley W. Ford and Noboru Endow—1277
Rates and mechanisms of protolysis of di- and trimethylammonium ions studied by proton magnetic resonance, A. Loewenstein and S. Meiboom—1067
Rates and mechanisms of protolysis of methylammonium ion in aqueous solution studied by proton magnetic resonance, Ernest Grunwald, A. Loewenstein, and S. Meiboom—630
Rates of paramagnetic pulse reactions by nuclear magnetic resonance, Harden M. McConnell and Stuart B. Berger—230
Reaction of diborane with Hg $6(^3P_1)$ atoms, T. Hirata and H. E. Gunning—477
Reactions of alkoxy radicals. I. Photolysis of methyl acetate, M. H. J. Wijnen—710
Reactions of nitrogen atoms. I. Oxygen and oxides of nitrogen, G. B. Kistiakowsky and G. G. Volpi—1141
Reply to the letter to the editor on "The slow reaction of carbon monoxide with oxygen" by R. H. Knipe and A. S. Gordon, P. Harteck, and S. Dondes—1419(L)
Role of NO_3 in the thermal decomposition of NO_2, Norman Davidson and Garry L. Schott—317(L)
Single-pulse shock tube studies of the kinetics of the reaction $N_2+O_2 \rightleftarrows 2NO$ between 2000–3000°K, H. S. Glick, J. J. Klein, and W. Squire—850
Slow reaction of carbon monoxide with oxygen, R. H. Knipe and Alvin S. Gordon—1418(L)
Sodium diffusion flame method for fast reactions. The use of a spherical source, John F. Reed and B. S. Rabinovitch—988(L)
Sound speed, E. L. Resler, Jr.—596(L)
Study of the mass spectra of the lower aliphatic alcohols, L. Friedman, F. A. Long, and M. Wolfsberg—613
Technique to produce free radicals in the solid state, Harold A. Papazian—813(L)
Temperature dependence of Hammett reaction constants, A. Fischer and J. Vaughan—976(L)
Thermal *cis-trans* isomerization of dichloroethylene: An unexceptional reaction, B. S. Rabinovich and M. J. Hulatt—592(L)
Thermal exchange of iodine with methyl iodide and with hydrogen iodide in the gas phase, Henry Schmied and Richard W. Fink—1034
Time lag in nucleation, H. L. Frisch—90
Vacuum ultraviolet photochemistry. Part V. Nitrous oxide at 1236 A, Murray Zelikoff and Leonard M. Aschenbrand—123
Water decomposition yields in the radiolysis of aqueous formic acid-oxygen solutions by cyclotron-produced radiations, Warren M. Garrison, Boyd M. Weeks, Joseph O. Ward, and Winifred Bennett—1214(L)

Large Molecules (see **Polymers**)

Liquids

Application of the series method of imperfect gas theory to other problems in statistical mechanics, Terrell L. Hill—561
Burning of a liquid droplet. III. Conductive heat transfer within the condensed phase during combustion, Henry Wise and C. M. Ablow—389
Density of liquid ozone, Robert I. Brabets and John M. McDonough—880
Dielectric dispersion in viscous polar liquids, J. W. Winslow, Jr., R. J. Good, and P. E. Berghausen—309
Dielectric properties of polyethylene glycols at microwave frequencies, Naokazu Koizumi—625
Dielectric properties of some liquid alkyl halides, Donald J. Denney—259
Discrimination between "radiative" and "nonradiative" transfer of molecular excitation energy in liquid systems, A. Weinreb—133
Heterophase fluctuations near the freezing point, S. J. Lukasik—523
Induced polarization and dielectric constant of polar liquids, Robert H. Cole—33
Intermolecular forces and the activation energy for viscous flow in liquids, T. H. S. Higgins and C. J. G. Raw—623
Monte Carlo equation of state of molecules interacting with the Lennard-Jones potential. I. A supercritical isotherm at about twice the critical temperature, W. W. Wood and F. R. Parker—720
Proton relaxation in water, S. Meiboom, Z. Luz, and D. Gill—1411(L)
Theory of multi-component fluid mixtures. II. A corresponding states treatment, Peter J. Wojtowicz, Zevi W. Salsburg, and John G. Kirkwood—505
Theory of the effects of exchange on the nuclear fine structure in the paramagnetic resonance spectra of liquids, Daniel Kivelson—1087
Transport processes in multicomponent liquids, Benson R. Sundheim—791
Validity of Nernst-Einstein and Stokes-Einstein relationships in molten $NaNO_2$, Ling Yang—601(L)

Magnetic Resonance

Analysis of spin-spin interaction in the nuclear magnetic resonance spectra of symmetrical molecules, E. Bright Wilson, Jr.—60
Application of nuclear resonance to the study of acid-base equilibria, Ernest Grunwald, A. Loewenstein, and S. Meiboom—641

Magnetic Resonance (continued)
Comments on "proton relaxation times in paramagnetic solutions," N. Bloembergen—595(L)
Electron spin resonance in a stable phenoxy radical, J. J. Windle and W. H. Thurston—1429(L)
EPR spectrum of solid nitrogen afterglow at 4.2°K, T. Cole, John T. Harding, John R. Pellam, and Don M. Yost—593(L)
F^{19} nuclear magnetic shielding in fluoronaphthalenes, Taro Isobe, Kan Inukai, and Kazuo Ito—1215(L)
Influence of some paramagnetic ions on the magnetic resonance absorption of alcohols, W. D. Phillips, C. E. Looney, and C. K. Ikeda—1435(L)
Ionization of strong electrolytes. V. Proton magnetic resonance in sulfuric acid, G. C. Hood and C. A. Reilly —1126
Magnetic relaxation spectroscopy with ionic solutions, S. Broersma—481
Molecular diamagnetic anisotropy and the proton magnetic resonance spectra of condensed aromatic hydrocarbons, Genjiro Hazato—605(L)
Negative spin densities in aromatic radicals, Harden M. McConnell and Donald B. Chestnut—984(L)
Nuclear magnetic relaxation in polytetrafluoroethylene and polyethylene, C. W. Wilson, III, and G. E. Pake —115
Nuclear magnetic resonance of hydrogen in metals, R. A. Oriani, E. McCliment, and J. F. Youngblood—330(L)
Nuclear magnetic resonance study of liquid crystal transitions, W. R. Runyan and A. W. Nolle—1081
Nuclear relaxation by the hyperfine interaction with the ion core spins in ferromagnetic and antiferromagnetic crystals, A. H. Mitchell—17
Nuclear resonance spectra of rapidly interconverting rotational isomers, Donald McLean Graham and J. S. Waugh —968(L)
Paramagnetism of solutions of aromatics in strong acids, C. MacLean and J. H. van der Waals—827(L)
Paramagnetic resonance in trivalent transition metal complexes, H. S. Jarrett—1298
Proton magnetic resonance absorption of sorbed water, Akira Miyake—1425(L)
Proton magnetic resonance studies on natural rubber. II. Line shape and T_1 measurements, H. S. Gutowsky, A. Saika, M. Takeda, and D. E. Woessner—534
Proton relaxation in water, S. Meiboom, Z. Luz, and D. Gill—1411(L)
Proton relaxation times in paramagnetic solutions, N. Bloembergen—572
Proton resonance shifts in nickelocene, H. M. McConnell and C. H. Holm—314(L)
Rates and mechanisms of protolysis of methylammonium ion in aqueous solution studied by proton magnetic resonance, Ernest Grunwald, A. Loewenstein, and S. Meiboom—630
Rates of paramagnetic pulse reactions by nuclear magnetic resonance, Harden M. McConnell and Stuart B. Berger —230
Rotational narrowing in nuclear magnetic resonance, Jerome I. Kaplan—1426(L)
Spin density in octocyanomolybdate ($\bar{V}$), S. I. Weissman and Mildred Cohn—1440(L)
Spin exchange in a biradical, D. C. Reitz and S. I. Weissman—968(L)
Theory of nuclear magnetic shielding in molecules. I. Long-range dipolar shielding of protons, Harden M. McConnell—226
Theory of the effects of exchange on the nuclear fine structure in the paramagnetic resonance spectra of liquids, Daniel Kivelson—1087
Tunneling through high periodic barriers. II. Application to nuclear magnetic resonance in solids, T. P. Das—763
Valance-bond interpretation of electron coupled proton-proton magnetic interactions measured via deuterium substitution, Martin Karplus, D. H. Anderson, T. C. Farrar, and H. S. Gutowsky—597(L)
Variational calculation of the nuclear magnetic shielding of the proton, Bruce R. McGarvey—68

Magnetic Susceptibilities
Crystallographic and magnetochemical studies on ABO_3 group compounds of lanthanon and manganese oxides, R. C. Vickery and Ardys Klann—1161
Magnetic and electric properties of vanadium trioxide, S. Teranishi and K. Tarama—1217(L)
Magnetic susceptibilities of some Pu^{+4} compounds, W. Burton Lewis and Norman Elliott—904
Magnetic susceptibilities of uranium (IV) ions in cubic crystalline fields, Clyde A. Hutchison, Jr., and George A. Candela—707
Magnetic susceptibilities of vanadates of neodymium and praseodymium, R. C. Vickery and Ardys Klann—1219(L)
Magnetic susceptibility of NpF_6, Bernard Weinstock and John G. Malm—594(L)
Magnetic susceptibility of titanium (III) in lanthanum titanium oxides, Carl W. Moeller—983(L)
Paramagnetic resonance in trivalent transition metal complexes, H. S. Jarrett—1298
Pi complexes between organic free radicals, K. H. Hausser and J. N. Murrell—500
Preparation and magnetic properties of pyrochlore-type titanates of neodymium and praseodymium, R. C. Vickery and Ardys Klann—1220(L)

Mass Spectra
Dissociation of CO^+ and CO^{++} ions by collision with neutral molecules, C. E. Melton and G. F. Wells—1132
Ionization and dissociation of oxygen difluoride by electron impact, Vernon H. Dibeler, Robert M. Reese, and J. L. Franklin—1296
Ionization and dissociation of perchlorylfluoride by electron impact, Vernon H. Dibeler, Robert M. Reese, and D. E. Mann—176
Mass spectroscopic determination of photoionization products, Richard F. Herzog and Frederick F. Marmo—1202
Organic ions in the gas phase. IV. $C_7H_7^+$ and $C_8H_8^+$ ions from alkylbenzenes and cycloheptatriene, Seymour Meyerson and Paul N. Rylander—901
Organic ions in the gas phase. V. $C_6H_5^+$ ion from toluene, Paul N. Rylander and Seymour Meyerson—1116
Polymeric gaseous species in the sublimation of tungsten trioxide, Joseph Berkowitz, William A. Chupka, and Mark G. Inghram—85
Secondary processes in mass spectrometer, M. Ackerman, J. Drowart, P. Goldfinger, and M. Jeunehomme—978(L)
Study of photoionization efficiencies using a mass spectrometer, H. Hurzeler, M. G. Inghram, and J. D. Morrison—313(L)
Study of the mass spectra of the lower aliphatic alcohols, L. Friedman, F. A. Long, and M. Wolfsberg—613
Thermodynamics of the Ta-O system: The dissociation energies of TaO and TaO_2, Mark G. Inghram, William A. Chupka, and Joseph Berkowitz—569
Thermodynamics of the V-O system: Dissociation energies of VO and VO_2, Joseph Berkowitz, W. A. Chupka, and Mark G. Inghram—87

Mechanics, Quantum

Analysis of spin-spin interaction in the nuclear magnetic resonance spectra of symmetrical molecules, E. Bright Wilson, Jr.—60

Asymmetric rotors, G. Wilse Robinson—1227(L)

Asymptotic relations in the Thomas-Fermi-Dirac atom model, J. J. Gilvarry—150

Bose-Einstein gas in a gravitational field, H. A. Gersch—928

Central-field approach for NH_3 and H_2O, K. E. Banyard and N. H. March—977(L)

Centrifugal distortion in symmetric rotor molecules, E. Bright Wilson, Jr.—986(L)

Crystalline field selection rules: The effect of vibration-electronic interaction, Robert A. Satten—286

Determination of fractional steric inhibition of resonance from σ_R values, Robert W. Taft, Jr., and Helene D. Evans—1427(L)

Drude-model calculation of dispersion forces. I. General theory, W. L. Bade—1280

Drude-model calculation of dispersion forces. II. The linear lattice, W. L. Bade and John G. Kirkwood—1284

Electronegativity of radicals. A method of calculation, J. K. Wilmshurst—1129

Electronic band structure of boron carbide, Masatoshi Yamazaki—746

Electronic energy of LiH and BeH^+, James Miller, R. H. Friedman, R. P. Hurst, and F. A. Matsen—1385

Electronic spectra and structure of the carbonyl group, Jerome W. Sidman—429

Electronic spectra of carbonium ions, A. A. Verrijn Stuart and E. L. Mackor—826(L)

Electronic structure of ammonia, A. B. F. Duncan—423

Electronic structure of diborane, Masateshi Yamazaki—1401

Excitation energies of benzene, Włodzmierz Kołos—592(L)

Excitation energies of ethylene, Włodzimierz Kołos—591(L)

FE theory including an elastic σ skeleton. I. Spectra and bond lengths in long polyenes, Heinrich Labhart—957

FE theory including an elastic σ skeleton. II. Changes of molecule dimensions due to optical excitation, Heinrich Labhart—963

Higher order rotation-vibration energies of polyatomic molecules. II, Gilbert Amat, Mark Goldsmith, and Harald H. Nielsen—832

Higher order rotation-vibration energies of polyatomic molecules. III, Gilbert Amat and Harald H. Nielsen—845

Hyperconjugation in the semi-empirical ASMO method, Toshifumi Morita—1442(L)

Inelastic molecular collisions with a Maxwellian interaction energy, B. Widom—940

Intensities of rotation lines in absorption bands, H. Hanson, H. H. Nielsen, W. H. Shaffer, and J. Waggoner—40

Intensity of the symmetry-forbidden electronic absorption band of formaldehyde, J. A. Pople and J. W. Sidman—1270

Interaction energies and scattering cross sections of hydrogen ions in helium, Edward A. Mason and Joseph T. Vanderslice—917

MO-theoretical approach to the mechanism of charge transfer in the process of aromatic substitutions, Kenichi Fukui, Teijiro Yonezawa, and Chikayoshi Nagata—1247

Molecular orbital study of the porphyrins, Gilbert R. Seely—125

Molecular orbitals for the ground state of the H_3 molecule, Frank E. Harris—812(L)

Negative spin densities in aromatic radicals, Harden M. McConnell and Donald B. Chestnut—984(L)

Nuclear quadrupole interaction in boron compounds, T. P. Das—1

Nuclear relaxation by the hyperfine interaction with the ion core spins in ferromagnetic and antiferromagnetic crystals, A. H. Mitchell—17

Open configuration calculations for lithium, George H. Brigman and F. A. Matsen—829(L)

Optical properties of solids. II, Herbert B. Rosenstock—1194

Overlap integrals involving d orbitals. II, Joe L. Roberts and H. H. Jaffé—883

Quadrupole coupling constant and molecular structure of CO^{17}, B. Rosenblum and A. H. Nethersot, Jr.—828(L)

Reciprocal mean as a measure of covalent bond energy, Thomas L. Allen—810(L)

SCF LCAO MO study of Li_3, James E. Faulkner—369

Semilocalized bond orbital treatment of the allyl radical, Jiro Higuchi—825(L)

Simple molecular orbital theory of conjugation in vinyl bromide and bromobenzene, John A. Howe and J. H. Goldstein—831

Spin density in octocyanomolybdate (V), S. I. Weissman and Mildred Cohn—1440(L)

Substituted benzene spectra, Lionel Goodman and Harrison Shull—1388

Successive ionization potentials of unsaturated hydrocarbons, N. S. Hush—612

Superiority of the Poeschl-Teller potential to that of Morse for diatomic molecules, Charles L. Beckel—998

Table of coefficients for the energy levels of a near symmetric top, Richard H. Schwendeman—986(L)

Theoretical electronic spectrum of the allyl system, H. D. Hunt, D. L. Peterson, and W. T. Simpson—20

Theory of nuclear magnetic shielding in molecules. I. Long-range dipolar shielding of protons, Harden M. McConnell—226

Use of polar coordinates for molecular wave functions, George S. Handler and James R. Arnold—144

Valance-bond interpretation of electron coupled proton-proton magnetic interactions measured via deuterium substitution, Martin Karplus, D. H. Anderson, T. C. Farrar, and H. S. Gutowsky—597(L)

Variational calculation of the nuclear magnetic shielding of the proton, Bruce R. McGarvey—68

Mechanics, Statistical

Application of the series method of imperfect gas theory to other problems in statistical mechanics, Terrell L. Hill—561

Approach to the theory of the second virial coefficient in high-polymer solutions, Edward F. Casassa—970(L)

Characteristic equations for reactive flow, W. W. Wood and J. G. Kirkwood—596(L)

Defects on a dipole lattice, A. Isihara—1174

Effect of adsorbent perturbation on B. E. T. theory, Warner L. Peticolas—436

Equations for a lattice gas. II. Multi-component systems, Howard B. Levine—335

Formulas for thermal conductivity of ternary gas mixtures, B. N. Srivastava and S. C. Saxena—583

Heterophase fluctuations near the freezing point, S. J. Lukasik—523

Mechanics, Statistical (continued)
Higher approximations for the transport properties of binary gas mixtures. I. General formulas, Edward A. Mason—75
Higher approximations for the transport properties of binary gas mixtures. II. Applications, Edward A. Mason —782
Improved approximation for the potential of spherical polyelectrolyte molecules in solution, Shneior Lifson—700
Intermolecular correlation in light scattering from dilute polymer solutions, Andreas C. Albrecht—1014
Intermolecular forces and the activation energy for viscous flow in liquids, T. H. S. Higgins and C. J. G. Raw—623
Lattice of partly permanent dipoles, R. A. Toupin and M. Lax—458
Monte Carlo equation of state of molecules interacting with the Lennard-Jones potential. I. A supercritical isotherm at about twice the critical temperature, W. W. Wood and F. R. Parker—720
Neighbor interactions and symmetric properties of polyelectrolytes, Shneior Lifson, Bruria Kaufman, and Hanna Lifson—1356
Nonstoichiometry and lattice defects in uranium hydride, George G. Libowitz—514
Note on the canonical ensemble for the ideal Einstein-Bose gas, J. Ford and T. H. Berlin—931
Phase transition for a hard sphere system, B. J. Alder and T. E. Wainwright—1208(L)
Preliminary results from a recalculation of the Monte Carlo equation of state of hard spheres, W. W. Wood and J. D. Jacobson—1207(L)
Random flight model in the theory of the second virial coefficient of polymer solutions, Andreas C. Albrecht—1002
Rotatory dispersion of protein and DNA, Hideo Murakami—1231
Series expansion of distribution functions in multi-component fluid systems, Emmanuel Meeron—1238
Sound speed, E. L. Resler, Jr.—596(L)
Statistical mechanics of flexible high polymers at surfaces, H. L. Frisch and Robert Simha—702
Theory of multi-component fluid mixtures. II. A corresponding states treatment, Peter J. Wojtowicz, Zevi W. Salsburg, and John G. Kirkwood—505
Transport processes in multicomponent liquids, Benson R. Sundheim—791

Metals
Adsorption and diffusion of oxygen on tungsten, Robert Gomer and J. K. Hulm—1363
Adsorption of CO on tungsten and its effect on the work function, Joseph Eisinger—1206(L)
Adsorption of nickel on molybdenum in the field emission microscope, E. C. McIrvine and R. C. Bradley—646
Coefficient of expansion of polonium, R. E. Brocklehurst, J. M. Goode, and L. F. Vassamillet—985(L)
Crystal growth of silver metal. Mechanism and kinetics, Welby G. Courtney—1349
Crystal structure of alpha-plutonium metal, W. H. Zachariasen and Finley Ellinger—811(L)
Electrodeposition onto metal whiskers, D. A. Vermilyea —814(L)
Electron in liquid ammonia, R. A. Stairs—1431(L)
Heat capacity of calcium from 1.8 to 4.2°K, Maurice Griffel, R. W. Vest, and J. F. Smith—1267
Heat capacity of holmium from 15 to 300°K, B. C. Gerstein, Maurice Griffel, L. D. Jennings, R. E. Miller, R. E. Skochdopole, and F. H. Spedding—394
Heat capacity of terbium from 15 to 350°K, L. D. Jennings, R. M. Stanton, and F. H. Spedding—909
Magnetic analysis of alloys by electron diffraction, S. Yamaguchi—1310
Model for metal ammonia solutions, Joshua Jortner—823(L)
Nuclear magnetic resonance of hydrogen in metals, R. A. Oriani, E. McCliment, and J. F. Youngblood—330(L)
Open configuration calculations for lithium, George H. Brigman and F. A. Matsen—829(L)
Small angle x-ray scattering from solutions of alkali metals in liquid ammonia, Paul W. Schmidt—23

Microwave Spectra (see **Absorption Spectra**)

Molecular Films (see **Surface Phenomena**)

Molecular Spectra (see **Absorption Spectra, Emission Spectra, Fluorescence, and Raman Spectra**)

Molecular Structure and Constants (see also **Absorption Spectra, Fluorescence, and Raman Spectra**)
Asymmetric rotors, G. Wilse Robinson—1227(L)
Adiabatic correlations for the formation of ions in degenerate electronic states, Andrew D. Liehr—476
B—Cl distance in boron trichloride, Masao Atoji and William N. Lipscomb—195
Central-field approach for NH_3 and H_2O, K. E. Banyard and N. H. March—977(L)
Centrifugal distortion in symmetric rotor molecules, E. Bright Wilson, Jr.—986(L)
Comments on the internal rotation problem, Dudley R. Herschbach—1420(L)
Comments on the vibrational spectrum of borine carbonyl, George W. Bethke and M. Kent Wilson—978(L)
Computation of rigid asymmetric rotator constants from energy moments, L. Carlton Brown and Paul M. Parker —1108
Crystal and molecular structure of B_5H_{15}, Richard E. Dickerson, Peter J. Wheatley, Peter A. Howell, and William N. Lipscomb—200
Crystal and molecular structure of diboron tetrachloride, B_2Cl_4, Masao Atoji, Peter J. Wheatley, and William N. Lipscomb—196
Determination of fractional steric inhibition of resonance from σ_R values, Robert W. Taft, Jr., and Helene D. Evans—1427(L)
Dielectric properties of polyethylene glycols at microwave frequencies, Naokazu Koizumi—625
Dipole moment of the molecular complex between triethylamine and iodine, Hiroshi Tsubomura and Saburo Nagakura—819(L)
Dipole moment of perchloryl fluoride, A. A. Maryott and S. J. Kryder—1221(L)
Dissociation of CO^+ and CO^{++} ions by collision with neutral molecules, C. E. Melton and G. F. Wells—1132
Effect of change in moment of inertia on the intensity distribution in P and R branches of $C_{\infty v}$ molecules, G. A. Gallup—1338
Electronegativity of radicals. A method of calculation, J. K. Wilmshurst—1129
Electronic energy of LiH and BeH^+, James Miller, R. H. Friedman, R. P. Hurst, and F. A. Matsen—1385
Electronic spectra and structure of the carbonyl group, Jerome W. Sidman—429
Electronic structure of ammonia, A. B. F. Duncan—423
Electronic structure of diborane, Masateshi Yamazaki—1401

Empirical regularities in the spectra of compounds containing chromophoric groups. I, Anneliese Wenzel—331(L)

Estimates of Hammett's sigma values from quadrupole resonance studies, P. J. Bray and R. G. Barnes—551

Evaluation of force constants of tetrahedral hydrides from raman and infrared data, C. W. F. T. Pistorius—965

Evaluation of molecular quadrupole moments from microwave line breadths. II. Experimental, Harold Feeny, Walter Madigowsky, and B. Winters—898

Excitation energies of benzene, Włodzimierz Kołos—592(L)

Excitation energies of ethylene, Włodzimierz Kołos—591(L)

Excitation of nitric oxide by active nitrogen, Frederick Kaufman and John R. Kelso—1209(L)

Far ultraviolet spectra of chlorocyclopropane, Elspeth C. Eberlin and Lucy W. Pickett—1439(L)

FE theory including an elastic σ skeleton. I. Spectra and bond lengths in long polyenes, Heinrich Labhart—957

FE theory including an elastic σ skeleton. II. Changes of molecule dimensions due to optical excitation, Heinrich Labhart—963

F^{19} nuclear magnetic shielding in fluoronaphthalenes, Taro Isobe, Kan Inukai, and Kazuo Ito—1215(L)

Flash spectroscopy of radicals in the shock tube, Charles E. Campbell and Irving Johnson—316(L)

Fundamental of $N^{15}O$, W. H. Fletcher and G. M. Begun—579

Higher order rotation-vibration energies of polyatomic molecules. II, Gilbert Amat, Mark Goldsmith, and Harald H. Nielsen—832

Higher order rotation-vibration energies of polyatomic molecules. III, Gilbert Amat and Harald H. Nielsen—845

Improved statistical method for computing mean dimensions of polymer molecules, F. T. Wall, R. J. Rubin, and L. M. Isaacson—186

Infrared absorption spectra of nitric acid and its solutions, R. A. Marcus and J. M. Fresco—564

Infrared and raman spectra of fluorinated ethylenes. VIII. 1,1-Difluoro-2-bromoethylene, Rose Theimer and J. Rud Nielsen—264

Infrared and raman spectra of fluorinated ethanes. IX. 1,1,1-Trifluoro-2-chloro-2-bromoethane, Rose Theimer and J. Rud Nielsen—887

Infrared and raman spectra of fluorinated ethanes. X. 1,1,1-Trifluoro-2-bromoethane, J. Rud Nielsen and Rose Theimer—891

Infrared and raman spectra of phosphorus pentachloride, J. K. Wilmshurst and H. J. Bernstein—661

Infrared band contours. I. Spherical top molecules, Walter F. Edgell and Robert E. Moynihan—155

Infrared dichroism of mutually perpendicular normal modes in oriented high polymers, C. Y. Liang and S. Krimm—1437(L)

Infrared intensity of the C—H stretching band of chloroform in some halogenated acetones, R. E. Kagarise—827(L)

Infrared spectra and vibrational assignment of monomeric formic acid, Roger C. Millikan and Kenneth S. Pitzer—1305

Infrared spectra of $N^{15}H_3$ and $N^{15}H_4^+$, H. W. Morgan, P. A. Staats, and J. H. Goldstein—1212(L)

Infrared spectrum and force constants of the nitrite ion, Ralph E. Weston, Jr., and Thomas F. Brodasky—683

Infrared spectrum of bromine in benzene, Willis B. Person, Ronald E. Erickson, and Robert E. Buckles—1211(L)

Infrared spectrum of hydrogen sulfide in the 2.6-micron region, Carleton M. Savage and T. Harvey Edwards—179

Infrared spectrum of NT_4Cl, H. W. Morgan, P. A. Staats, and J. H. Goldstein—1212(L)

Infrared spectrum of trifluoroacetic acid vapor, R. E. Kagarise—519

Infrared studies of hydrogen bonding of methanol by the matrix isolation technique, Mathias Van Thiel, Edwin D. Becker, and George C. Pimentel—95

Infrared studies of hydrogen bonding of water by the matrix isolation technique, Mathias Van Thiel, Edwin D. Becker, and George C. Pimentel—486

Interaction of vibrational and electronic motion in alkali halide molecules, R. Stephen Berry—1288

Internal barrier of propylene oxide from the microwave spectrum. I, Jerome D. Swalen and Dudley R. Herschbach—100

Intramolecular and intermolecular coupling of CN_2 rocking modes in *n*-paraffins, Robert O. Snyder—969(L)

Ionization and dissociation of oxygen difluoride by electron impact, Vernon H. Dibeler, Robert M. Reese, and J. L. Franklin—1296

Ionization and dissociation of perchlorylfluoride by electron impact, Vernon H. Dibeler, Robert M. Reese, and D. E. Mann—176

Isotope effect on the mean-square amplitude, Katsumi Kimura—1213(L)

Least squares refinements of $E_{10}H_{14}$, B_4H_{10}, and B_5H_{11}, Emmett B. Moore, Jr., Richard E. Dickerson, and William N. Lipscomb—209

Magnetic susceptibility of NpF_6, Bernard Weinstock and John G. Malm—594(L)

Microwave spectra of molecules exhibiting internal rotation, I. Propylene, David R. Lide, Jr., and D. E. Mann—868

Microwave spectra of molecules exhibiting internal rotation. II. Methylallene, David R. Lide, Jr., and D. E. Mann—874

Microwave spectrum and barrier to internal rotation for *trans*-fluoro-propylene, Seymour Siegel—989(L)

Microwave spectrum and barrier to internal rotation of acetic acid, William J. Tabor—974(L)

Microwave spectrum and molecular structure of bromine trifluoride, D. W. Magnuson—223

Microwave spectrum and structure of $(CH_3)_3CCN$, T. Sparstad and E. Amble—317(L)

Microwave spectrum, structure, and internal barrier of methyl silane, R. W. Kilb and Louis Pierce—108

Microwave spectrum, structure, dipole moment, and quadrupole coupling constants of formamide, Robert J. Kurland and E. Bright Wilson, Jr.—585

MO-theoretical approach to the mechanism of charge transfer in the process of aromatic substitutions, Kenichi Fukui, Teijiro Yonezawa, and Chikayoshi Nagata—1247

Molecular diamagnetic anisotropy and the proton magnetic resonance spectra of condensed aromatic hydrocarbons, Genjiro Hazato—605(L)

Molecular orbitals for the ground state of the H_3 molecule, Frank E. Harris—812(L)

Molecular structure of *bis*-[cyclopentadienyl molybdenum tricarbonyl], Frank C. Wilson and David F. Shoemaker—809(L)

Molecular structure of tropone, Katsumi Kimura, Satoshi Suzuki, Masao Kimura, and Masaji Kubo—320(L)

Molecular Structure and Constants (continued)
Negative spin densities in aromatic radicals, Harden M. McConnell and Donald B. Chestnut—984(L)
Nonresonant absorption of symmetric top molecules. Shape of the nonresonant spectra, George Birnbaum—360
Normal coordinate analysis of halogenated ethylenes. I. General methods, D. E. Mann, T. Shimanouchi, J. H. Meal and L. Fano—43
Normal coordinate analysis of halogenated ethylenes. II. Perhalogenated ethylenes, D. E. Mann, L. Fano, J. H. Meal, and T. Shimanouchi—51
Normal coordinates in the methyl halides, W. T. King, Ian M. Mills, and Bryce Crawford, Jr.—455
Normal frequencies of octahedral $M(XY)_6$ molecules, Hiromu Murata and Kiyoyasu Kawai—605(L)
Normal frequencies of tetaramethylmethane, Hiromu Murata and Kazuhiro Shimizu—599(L)
Nuclear quadrupole coupling in the alkali chloroiodides. I. Chlorine resonances, C. D. Cornwell and R. S. Yamasaki—1060
Nuclear quadrupole interaction in boron compounds, T. P. Das—1
Nuclear quadrupole resonances in nitrogen compounds. I. Ammonia, deuteroammonia, and thimethylamine, C. T. O'Konski and T. J. Flautt—815(L)
Nuclear resonance spectra of rapidly interconverting rotational isomers, Donald McLean Graham and J. S. Waugh—968(L)
l-Type doubling in three $\pi-\pi$ bands of HCN, D. H. Rank, J. N. Shearer, A. H. Guenther, and T. A. Wiggins—532
Organic ions in the gas phase. IV. $C_7H_7^+$ and $C_5H_5^+$ ions from alkylbenzenes and cycloheptatriene, Seymour Meyerson and Paul N. Rylander—901
Organic ions in the gas phase. V. $C_6H_5^+$ ion from toluene, Paul N. Rylander and Seymour Meyerson—1116
Paramagnetism of solutions of aromatics in strong acids, C. MacLean and J. H. van der Waals—827(L)
Photoisomerization equilibria in azodyes, Ernst Fischer and Yael Frei—328(L)
Photoörientation, Andreas C. Albrecht—1413(L)
Pi complexes between organic free radicals, K. H. Hausser and J. N. Murrell—500
Polymeric gaseous species in the sublimation of tungsten trioxide, Joseph Berkowitz, William A. Chupka, and Mark G. Inghram—85
Polynuclear metal carbonyls. III. Infrared analysis of iron tetracarbonyl, Lawrence F. Dahl and R. E. Rundle —323(L)
Pressure broadening in the gamma bands of nitric oxide, Walter R. Thorson and Richard M. Badger—609
Proton magnetic resonance studies on natural rubber. II. Line shape and T_1 measurements, H. S. Gutowsky, A. Saika, M. Takeda, and D. E. Woessner—534
Proton resonance shifts in nickelocene, H. M. McConnell and C. H. Holm—314(L)
Pure quadrupole spectrum of cyanuric chloride, Hisao Negita and Sumio Satou—602(L)
Quadrupole coupling constant and molecular structure of CO^{17}, B. Rosenblum and A. H. Nethercot, Jr.—828(L)
Raman and infrared intensities in the vibrational spectra of hydrocarbons. I. Skeletal vibrations of straight zigzag chains, Otto N. Theimer—408
Raman and infrared intensities in the vibrational spectra of hydrocarbons. II. The CH vibrations of straight *n*-paraffins, O. Theimer—1041
Raman and infrared spectra of CCl_3CN, Walter F. Edgell and Casper J. Ultee—543
Range of validity of Higashi's equation for a quick determination of dipole moment in solution, Bal Krishna and K. K. Srivastava—835
Reinvestigation of the molecular structure of 1,3,5,7-cyclooctatetraene by electron diffraction, O. Bastiansen, and Lise Hedberg and Kenneth Hedberg—1311
Renner effect in polyatomic molecules, K. Dressler and D. A. Ramsay—971(L)
Rotatory dispersion of protein and DNA, Hideo Murakami—1231
SCF LCAO MO study of Li_3, James E. Faulkner—369
Semilocalized bond orbital treatment of the allyl radical, Jiro Higuchi—825(L)
Semitopological approach to boron-hydride structures, Richard E. Dickerson and William N. Lipscomb—212
Spectra of the alkali halides. II. The infrared spectra of the sodium and potassium halides, RbCl and CsCl, Stuart A. Rice and William Klemperer—573
Spectra of the paracyclophanes, Lloyd L. Ingraham—1228(L)
Spin density in octocyanomolybdate ($\bar{V}$), S. I. Weissman and Mildred Cohn—1440
Spin exchange in a biradical, D. C. Reitz and S. I. Weissman—968(L)
Structure in ionic solutions. I, G. W. Brady and J. T. Krause—304
Structure of ethylene, L. S. Bartell and R. A. Bonham—1414(L)
Structure of gaseous chloropicrin as determined by electron diffraction, W. M. Barss—1260
Structure of Roussin's black salt, Georg Johansson and William N. Lipscomb—1417(L)
Structure of the interhalogen compounds. II. Iodine heptafluoride at −110°C and at −145°C, Robinson D. Burbank and Frank N. Bensey, Jr.—981(L)
Structure of the interhalogen compounds. III. Concluding note on bromide trifluoride, bromine pentafluoride, and iodine pentafluoride, Robinson D. Burbank and Frank N. Bensey, Jr.—982(L)
Structure of the methylamine molecule. I. Microwave spectrum of CD_3ND_2, David R. Lide, Jr.—343
Structure of the methylamine molecule. II. Theory of internal motions and application to CD_3ND_2, Daniel Kivelson and David R. Lide, Jr.—353
Structure of tellurium oxide glass, George W. Brady—300
Study of photoionization efficiencies using a mass spectrometer, H. Hurzeler, M. G. Inghram, and J. D. Morrison—313(L)
Study of the $A^1\Pi \rightarrow X^1\Sigma^+$ bands of $B^{11}F$ with a vacuum echelle spectrograph, Ryumyo Onaka—374
Study of the mass spectra of the lower aliphatic alcohols, L. Friedman, F. A. Long, and M. Wolfsberg—613
Study on the state of nitrogen adsorbed on evaporated barium film, Yozo Sasaki—281
Successive ionization potentials of unsaturated hydrocarbons, N. S. Hush—612
Superiority of the Poeschl-Teller potential to that of Morse for diatomic molecules, Charles L. Beckel—998
Table of coefficients for the energy levels of a near symmetric top, Richard H. Schwendeman—986(L)
Tables of Mathieu integrals for the internal rotation problem, Dudley R. Herschbach—975(L)
Theory of dilute polymer solutions, Ryuzo Koyama—234
Thermodynamic properties of the gaseous alkali halides, Stuart A. Rice and William Klemperer—643
Thermodynamics of the V-O system: Dissociation energies of VO and VO_2, Joseph Berkowitz, W. A. Chupka, and Mark G. Inghram—87

Tunneling through high periodic barriers. II. Application to nuclear magnetic resonance in solids, T. P. Das—763

Ultraviolet spectra and electronic structure of metallic complexes. I. Chloroammine cobalt (III) complexes, Kazuo Nakamoto, Junnosuke Fujita, Masahisa Kobayashi, and Ryutaro Tsuchida—439

Use of polar coordinates for molecular wave functions, George S. Handler and James R. Arnold—144

Valence-bond interpretation of electron coupled proton-proton magnetic interactions measured via deuterium substitution, Martin Karplus, D. H. Anderson, T. C. Farrar, and H. S. Gutowsky—597(L)

Vibrational intensities. VIII. CH_3 and CD_3 chloride, bromide, and iodide, A. D. Dickson, I. M. Mills, and Bryce Crawford, Jr.—445

Vibrational spectra and structure of phosphonium and deutero-phosphonium iodides, J. V. Martinez and E. L. Wagner—1110

Vibrational spectra of fluorinated aromatics. XIII. Benzotrifluoride, N. A. Narasimham, J. Rud Nielsen, and Rose Theimer—740

Vibrational spectra of molecules and complex ions in crystals. X. H_2S and D_2S, F. P. Reding and D. F. Hornig—1024

Vibrational spectra of *sym*-trioxane, A. T. Stair, Jr., and J. Rud Nielsen—402

Vibrational spectrum and structure of metal-cyanide complexes in the solid state. II. $KAu(CN)_2$, Llewellyn N. Jones—468

Vibrational spectrum and structure of metal-cyanide complexes in the solid state. III. $Hg(CN)_2$, Llewellyn H. Jones—665

Vibrational spectrum of dimethylphosphine, Harold C. Beachell and Bernard Katlafsky—182

Vibrational spectrum of 3,3,3-trichloropropene-1, E. R. Shull—399

Neutron Diffraction

Nuclear Quadrupole Resonance

Cl^{35} pure quadrupole resonance studies of relaxation times in solid solutions of *p*-dichlorobenzene, D. E. Woessner and H. S. Gutowsky—1072

Estimates of Hammett's sigma values from quadrupole resonance studies, P. J. Bray and R. G. Barnes—551

Line width of the pure quadrupole resonance of bromine in $KBrO_3$, Yoshitaka Kôi, Akira Tsujimura, and Yoshiro Imaeda—603(L)

Nuclear quadrupole resonances in nitrogen compounds. I. Ammonia, deuteroammonia, and trimethylamine, C. T. O'Konski and T. J. Flautt—815(L)

Pure quadrupole spectrum of cyanuric chloride, Hisao Negita and Sumio Satou—602(L)

Nuclear Resonance (see **Magnetic Resonance**)

Nucleation

Kinetic study of the oxidation of uranium dioxide, S. Aronson, R. B. Roof, Jr., and J. Belle—137

Time lag in nucleation, H. L. Frisch—90

Phosphors

Empirical regularities in the spectra of compounds containing chromophoric groups. I, Anneliese Wenzel—331(L)

Mechanism of luminescence in the ZnF_2: Mn phosphor, Peter D. Johnson and Farren H. Smith—600(L)

Photochemistry

Exploding wire as a light source in flash photolysis, Gisela K. Oster and R. A. Marcus—189

Photochemical formation of nitrous oxide, W. E. Groth and H. Schierholz—973(L)

Photochemical studies in flash photolysis. I. Photolysis of acetone, Gisela K. Oster and R. A. Marcus—472

Photoisomerization equilibria in azodyes, Ernst Fischer and Yael Frei—328(L)

Photoisomerization equilibria involving the C=N double bond, Ernst Fischer and Yael Frei—808(L)

Photolysis of water vapor, Mei Chio Chen and H. Austin Taylor—857

Rate constants at low concentrations. III. Atomic oxygen reactions in the photolysis of nitrogen dioxide at 3660 A, Hadley W. Ford and Noboru Endow—1156

Reactions of alkoxy radicals. I. Photolysis of methyl acetate, M. H. J. Wijnen—710

Reaction of diborane with Hg $6(^3P_1)$ atoms, T. Hirata and H. E. Gunning—477

Vacuum ultraviolet photochemistry. V. Nitrous oxide at 1236 A, Murray Zelikoff and Leonard M. Aschenbrand—123

Photoconductivity

Photoconductivity of anthracene. III, D. M. J. Compton, W. G. Schneider, and T. C. Waddington—160

Photoconduction of phthalocyanines in presence of oxygen, John A. Bornmann—604(L)

Photoelectric properties of chlorophyll, R. C. Nelson—864

Photoionization

Study of photoionization efficiencies using a mass spectrometer, H. Hurzeler, M. G. Inghram, and J. D. Morrison—313(L)

Polymers

Approach to the theory of the second virial coefficient in high-polymer solutions, Edward F. Casassa—970(L)

Characteristics of plastic scintillators, Louis J. Basile—801

Improved approximation for the potential of spherical polyelectrolyte molecules in solution, Shneior Lifson—700

Improved statistical method for computing mean dimensions of polymer molecules, F. T. Wall, R. J. Rubin, and L. M. Isaacson—186

Infrared dichroism of mutually perpendicular normal modes in oriented high polymers, C. Y. Liang and S. Krimm—1437(L)

Intermolecular correlation in light scattering from dilute polymer solutions, Andreas C. Albrecht—1014

Low-temperature dielectric absorption in polymethyl methacrylate, D. J. Scheiber and D. J. Mead—326(L)

Mechanical resonance dispersion in crystalline polymers at audio-frequencies, Edwin R. Fitzgerald—1180

Neighbor interactions and symmetric properties of polyelectrolytes, Shneior Lifson, Bruria Kaufman, and Hanna Lifson—1356

New absolute molecular weight method (linear high polymers), F. Bueche and S. W. Harding—1210(L)

Nuclear magnetic relaxation in polytetrafluoroethylene and polyethylene, C. W. Wilson, III, and G. E. Pake—115

Orientation in polyethylene terephthalate film, C. Y. Liang and S. Krimm—327(L)

Proton magnetic resonance studies on natural rubber. II. Line shape and T_1 measurements, H. S. Gutowsky, A. Saika, M. Takeda, and D. E. Woessner—534

Random flight model in the theory of the second virial coefficient of polymer solutions, Andreas C. Albrecht—1002

Statistical mechanics of flexible high polymers at surfaces, H. L. Frisch and Robert Simha—702

Polymers (continued)
Theory of dilute polymer solutions, Ryuzo Koyama—234
Transfer of energy in solid plastic solutions, P. Avivi and A. Weinreb—716

Proteins
On the rotatory dispersion of protein and DNA, Hideo Murakami—1231

Quadrupole Resonance (see **Nuclear Quadrupole Resonance**)

Quantum Mechanics (see **Mechanics, Quantum**)

Radiation Chemistry
Absorption of radiation by a cylindrical sample of a strong absorber, William H. Clingman, Jr.—322(L)
Chemical effects of hot atoms, Louis Monchick, Koichi Funabashi, and John L. Magee—734
Decomposition of nitric oxide and nitrogen dioxide by the impact of fission fragments of uranium-235, P. Harteck and S. Dondes—546
Enrichment of arsenic-76 by hot-atom effect, Nobufusa Saito, Michiaki Furukawa, and Isao Tomita—1432(L)
Formation of reversible colored modifications at low temperatures by bombardment with electrons, Yehuda Hirshberg—758
Hydrogen yields in aqueous sodium nitrate solution by cobalt-60 gamma ray radiation, H. A. Mahlman and J. W. Boyle—1434(L)
Radiation chemistry of solid paraffins, A. I. Snow and H. C. Moyer—1222(L)
Radiolysis of solid nitrates, C. J. Hochanadel and T. W. Davis—333(L)
Water decomposition yields in the radiolysis of aqueous formic acid-oxygen solutions by cyclotron-produced radiations, Warren M. Garrison, Boyd M. Weeks, Joseph O. Ward, and Winifred Bennett—1214(L)

Radiochemistry

Raman Spectra
Evaluation of force constants of tetrahedral hydrides from raman and infrared data, C. W. F. T. Pistorius—965
Hydrogen vibration spectra of Rochelle salt, A. N. Baker and D. S. Webber—689
Infrared and raman spectra of fluorinated ethanes. IX. 1,1,1-Trifluoro-2-chloro-2-bromoethane, Rose Theimer and J. Rud Nielsen—887
Infrared and raman spectra of fluorinated ethanes. X. 1,1,1-Trifluoro-2-bromoethane, J. Rud Nielsen and Rose Theimer—891
Infrared and raman spectra of fluorinated ethylenes. VIII. 1,1-Difluoro-2-bromoethylene, Rose Theimer and J. Rud Nielsen—264
Infrared and raman spectra of phosphorus pentachloride, J. K. Wilmshurst and H. J. Bernstein—661
Normal frequencies of tetramethylmethane, Hiromu Murata and Kazuhiro Shimizu—599(L)
Raman and infrared intensities in the vibrational spectra of hydrocarbons. I. Skeletal vibrations of straight zigzag chains, Otto H. Theimer—408
Raman and infrared intensities in the vibrational spectra of hydrocarbons. II. The CH vibrations of straight *n*-paraffins, O. Theimer—1041
Raman and infrared spectra of CCl_3CN, Walter F. Edgell and Casper J. Ultee—543
Vibrational spectra of fluorinated aromatics. XIII. Benzotrifluoride, N. A. Narasimham, J. Rud Nielsen, and Rose Theimer—740
Vibrational spectra of *sym*-trioxane, A. T. Stair, Jr., and J. Rud Nielsen—402
Vibrational spectrum of 3,3,3-trichloropropene-1, E. R. Shull—399

Reaction Rates (see **Kinetics of Reaction**)

Refractive Indexes

Rotation

Rotational Isomerism
Nuclear resonance spectra of rapidly interconverting rotational isomers, Donald McLean Graham and J. S. Waugh—968(L)

Scattering
Interaction energies and scattering cross sections of hydrogen ions in helium, Edward A. Mason and Joseph T. Vanderslice—917
Scattering of high velocity neutral particles. X. He—N_2; A—N_2. The N_2—N_2 interaction, I. Amdur, E. A. Mason, and J. E. Jordan—527

Secondary Electron Emission

Sedimentation

Semiconductors
Photoconduction of phthalocyanines in presence of oxygen, John A. Bornmann—604(L)

Shock Waves (see also **Detonation**)
C_2 and CN emission in the shock tube, G. Charatis, L. R. Doherty, and T. D. Wilkerson—1415(L)
Determination of the speed of sound in sulfurhexafluoride in a shock tube, I. I. Glass and J. G. Hall—1223(L)
Measurement of the vibrational relaxation time of CO behind a shock wave by infrared emission, M. W. Windsor, Norman Davidson, and Ray Taylor—315(L)
Shock tube study of dissociation relaxation in oxygen, H. S. Glick and W. H. Wurster—1224(L)
Single-pulse shock tube studies of the kinetics of the reaction $N_2+O_2 \rightleftarrows 2NO$ between 2000–3000°K, H. S. Glick, J. J. Klein, and W. Squire—850
Ultraviolet spectrum of air at 5750°K, W. H. Wurster and H. S. Glick—1218(L)

Solutions (see also **Liquids**)
Application of nuclear resonance to the study of acid-base equilibria, Ernest Grunwald, A. Loewenstein, and S. Meiboom—641
Application of the series method of imperfect gas theory to other problems in statistical mechanics, Terrell L. Hill—561
Approach to the theory of the second virial coefficient in high-polymer solutions, Edward F. Casassa—970(L)
Comments on "proton relaxation times in paramagnetic solutions," N. Bloembergen—595(L)
Comments on "The partial molal entropies of ions in aqueous solution" by P. C. Scott and Z Z. Hugus, K. J. Laidler—1423(L)
Concentration dependence of diffusion coefficient: Analysis of skewed diffusion curve, Yasunori Nishijima and Gerald Oster—269
Dielectric dispersion of boric acid in water. The rate of recombination of H^+ and $H_2BO_3^-$ at 35°C, W. R. Gilkerson—914
Dispersion of soluble matter in flow through granular media, Mark Jay Beran—270
Electron in liquid ammonia, R. A. Stairs—1431(L)
Electronic spectral shifts of nonpolar molecules in nonpolar solvents, H. C. Longuet-Higgins and J. A. Pople—192

Improved approximation for the potential of spherical polyelectrolyte molecules in solution, Shneior Lifson—700

Infrared intensity of the C—H stretching band of chloroform in some halogenated acetones, R. E. Kagarise—827(L)

Intermolecular correlation in light scattering from dilute polymer solutions, Andreas C. Albrecht—1014

Ionization of strong electrolytes. V. Proton magnetic resonance in sulfuric acid, G. C. Hood and C. A. Reilly—1126

Magnetic relaxation spectroscopy with ionic solutions, S. Broersma—481

Model for metal ammonia solutions, Joshua Jortner—823(L)

Neighbor interactions and symmetric properties of polyelectrolytes, Shneior Lifson, Bruria Kaufman, and Hanna Lifson—1356

Nonideality of liquid ortho-parahydrogen solutions, Harold L. Friedman—220

Paramagnetism of solutions of aromatics in strong acids, C. MacLean and J. H. van der Waals—827(L)

Partial molal entropies of ions in aqueous solution, Paul C. Scott and Z Z. Hugus, Jr.—1421(L)

Proton relaxation times in paramagnetic solutions, N. Bloembergen—572

Random flight model in the theory of the second virial coefficient of polymer solutions, Andreas C. Albrecht—1002

Range of validity of Higashi's equation for a quick determination of dipole moment in solution, Bal Krishna and K. K. Srivastava—835

Small angle x-ray scattering from solutions of alkali metals in liquid ammonia, Paul W. Schmidt—23

Solubility of lithium in silicon, C. S. Fuller and H. Reiss—318(L)

Structure in ionic solutions. I, G. W. Brady and J. T. Krause—304

Theory of dilute polymer solutions, Ryuzo Koyama—234

Theory of multi-component fluid mixtures. II. A corresponding states treatment, Peter J. Wojtowicz, Levi W. Salsburg, and John G. Kirkwood—505

Transfer of energy in solid plastic solutions, P. Avivi and A. Weinreb—716

Spectra (see **Absorption Spectra, Emission Spectra, Fluorescence, Raman Spectra**)

Statistical Mechanics (see **Mechanics, Statistical**)

Surface Phenomena

Adsorption and diffusion of hydrogen on nickel, R. Wortman, R. Gomer, and R. Lundy—1099

Adsorption and diffusion of oxygen on tungsten, Robert Gomer and J. K. Hulm—1363

Adsorption of CO on tungsten and its effect on the work function, Joseph Eisinger—1206(L)

Adsorption of nickel on molybdenum in the field emission microscope, E. C. McIrvine and R. C. Bradley—646

Argon adsorbed on a graphitic surface. The heat of adsorption from lattice liquid theory, E. L. Pace—1341

Chemical etches and etch pit patterns on PbS crystals, R. F. Brebrick and W. W. Scanlon—607

Effect of adsorbent perturbation on B. E. T. theory, Warner L. Peticolas—436

Fractionation of oxygen isotopes in the formation of oxide films on copper, John B. Brown, Malcolm Dole, and G. A. Lane—251

Interaction of single argon atoms with graphitized carbon black P-33 (2700), G. C. Constabaris and C. D. Halsey, Jr.—1433(L)

Oxygen sorption phenomena on cadmium selenide crystals, Richard H. Bube—496

Plasma augmentation of the surface conductivity of glasses, R. G. Fowler and M. Sakuntala—824(L)

Possibility of enhanced catalytic reactions, Manfred J. D. Low—979(L)

Proton magnetic resonance absorption of sorbed water, Akira Miyake—1425(L)

Statistical mechanics of flexible high polymers at surfaces, H. L. Frisch and Robert Simha—702

Study on the state of nitrogen adsorbed on evaporated barium film, Yozo Sasaki—281

Temperature coefficient of surface tension of molten glasses, R. F. Kruh and A. B. Bestul—319(L)

Thermal Diffusion

Operation of a center-fed continuous-flow thermogravitational column with unequal flow rates in the two column sections. Comparison of theory and experiment, John E. Powers and C. R. Wilke—1000

Higher approximations for the transport properties of binary gas mixtures. II. Applications, Edward A. Mason—782

Potential parameters for krypton, M. P. Madan—113

Higher approximations for the transport properties of binary gas mixtures. I. General formulas, Edward A. Mason—75

Thermodynamic Properties

Absolute temperatures below 1°K: Chromic methylammonium alum as a thermometric substance, E. Ambler and R. P. Hudson—378

Adiabatic correlations for the formation of ions in degenerate electronic states, Andrew D. Liehr—476

Application of nuclear resonance to the study of acid-base equilibria, Ernest Grunwald, A. Loewenstein, and S. Meiboom—641

Bose-Einstein gas in a gravitational field, H. A. Gersch—928

Coefficient of expansion of polonium, R. E. Brocklehurst, J. M. Goode, and L. F. Vassamillet—985(L)

Comments on "The partial molal entropies of ions in aqueous solution" by P. C. Scott and Z. Z. Hugus, K. J. Laidler—1423(L)

Compressions and solid phases of CO_2, CS_2, COS, O_2, and CO, Richard Stevenson—673

Defects on a dipole lattice, A. Isihara—1174

Electronic structure of ammonia, A. B. F. Duncan—423

Entropy, heat capacity, and heats of transition of 1,2,4-trimethylbenzene, William E. Putnam and John E. Kilpatrick—1075

Free energy functions for 54 gaseous elements, Harwood G. Kolsky, Ruth M. Gilmer, and Paul W. Gilles—494

Heat capacity of calcium from 1.8 to 4.2°K, Maurice Griffel, R. W. Vest, and J. F. Smith—1267

Heat capacity of holmium from 15 to 300°K, B. C. Gerstein, Maurice Griffel, L. D. Jennings, R. E. Miller, R. E. Skochdopole, and F. H. Spedding—394

Heat capacity of terbium from 15 to 350°K, L. D. Jennings, R. M. Stanton, and F. H. Spedding—909

Heats of combustion of some peroxides and the heats of formation of acetate, propionate, and butyrate radicals, L. Jaffe, E. J. Prosen, and M. Szwarc—416

Infrared absorption spectra of nitric acid and its solutions, R. A. Marcus and J. M. Fresco—564

Thermodynamic Properties (continued)
Infrared and raman spectra of fluorinated ethylenes. VIII. 1,1-Difluoro-2-bromoethylene, Rose Theimer and J. Rud Nielsen—264
Infrared and raman spectra of fluorinated ethanes. IX. 1,1,1-Trifluoro-2-chloro-2-bromoethane, Rose Theimer and J. Rud Nielsen—887
Infrared and raman spectra of fluorinated ethanes. X. 1,1,1-Trifluoro-2-bromoethane, J. Rud Nielsen and Rose Theimer—891
Infrared and raman spectra of phosphorus pentachloride, J. K. Wilmshurst and H. J. Bernstein—661
Infrared spectra and vibrational assignment of monomeric formic acid, Roger C. Millikan and Kenneth S. Pitzer —1305
Infrared spectrum of trifluoroacetic acid vapor, R. E. Kagarise—519
Ionization and dissociation of perchlorylfluoride by electron impact, Vernon H. Dibeler, Robert M. Reese, and D. E. Mann—176
Isotope effects on thermodynamic functions of hindered rotators, W. H. Stockmayer—321(L)
Monte Carlo equation of state of molecules interacting with the Lennard-Jones potential. I. A supercritical isotherm at about twice the critical temperature, W. W. Wood and F. R. Parker—720
Nonideality of liquid ortho-parahydrogen solutions, Harold L. Friedman—220
Partial molal entropies of ions in aqueous solution, Paul C. Scott and Z Z. Hugus, Jr.—1421(L)
Polymeric gaseous species in the sublimation of tungsten trioxide, Joseph Berkowitz, William A. Chupka, and Mark G. Inghram—85
SCF LCAO MO study of Li_2, James E. Faulkner—369
Solid methane—changes in phase under pressure, Richard Stevenson—656
Standard electrode potential of the silver, silver chloride electrode, E. Lee Purlee and Ernest Grunwald—990(L)
Temperature coefficient of surface tension of molten glasses, R. F. Kruh and A. B. Bestul—319(L)
Tentative phase diagram for solid H_2S, Richard Stevenson—147
Thermodynamic consistency of data on AgBr, A. W. Lawson—598(L)
Thermodynamic functions of carbonyl chloride, John S. Gordon and David Goland—1223(L)
Thermodynamic functions of cyclobutene, Alfred Danti—1227(L)
Thermodynamic properties of the gaseous alkali halides, Stuart A. Rice and William Klemperer—643
Thermodynamics of the Ta-O system: The dissociation energies of TaO and TaO_2, Mark G. Inghram, William A. Chupka, and Joseph Berkowitz—569
Thermodynamics of the V–O system: Dissociation energies of VO and VO_2, Joseph Berkowitz, W. A. Chupka, and Mark G. Inghram—87
Vapor pressures and vapor densities from direct weighings of Knudsen cells, John L. Margrave—1412(L)

Thermodynamics
Absolute temperatures below 1°K: Chromic methylammonium alum as a thermometric substance, E. Ambler and R. P. Hudson—378
Application of the series method of imperfect gas theory to other problems in statistical mechanics, Terrell L. Hill—561
Effect of adsorbent perturbation on B. E. T. theory, Warner L. Peticolas—436
Equations for a lattice gas. II. Multicomponent systems, Howard B. Levine—335
Heterophase fluctuations near the freezing point, S. J. Lukasik—523
Isoaffine reactions, C. A. Hollingsworth and Robert L. Potter—896
Lattice of partly permanent dipoles, R. A. Toupin and M. Lax—458
Monte Carlo equation of state of molecules interacting with the Lennard-Jones potential. I. A supercritical isotherm at about twice the critical temperature, W. W. Wood and F. R. Parker—720
Phase transition for a hard sphere system, B. J. Alder and T. E. Wainwright—1208(L)
Random flight model in the theory of the second virial coefficient of polymer solutions, Andreas C. Albrecht—1002
Theory of multi-component fluid mixtures. II. A corresponding states treatment, Peter J. Wojtowicz, Zevi W. Salsburg, and John G. Kirkwood—505
Thermodynamics for elastic solids in the electrostatic field. I. General formulation, James C. M. Li and Tsuan Wu Ting—693

Thermoluminescence
Thermoluminescence and coloration of lithium fluoride produced by alpha particles, electrons, gamma rays, and neutrons, Frederick F. Morehead and Farrington Daniels—1318

Transport Phenomena
Formulas for thermal conductivity of ternary gas mixtures, B. N. Srivastava and S. C. Saxena—583
Higher approximations for the transport properties of binary gas mixtures. I. General formulas, Edward A. Mason—75
Higher approximations for the transport properties of binary gas mixtures. II. Applications, Edward A. Mason —782
Intermolecular forces and the activation energy for viscous flow in liquids, T. H. S. Higgins and C. J. G. Raw—623
Potential parameters for krypton, M. P. Madan—113
Transport phenomena in a dense gas of rigid spheres, John S. Dahler—1428(L)
Transport processes in multicomponent liquids, Benson R. Sundheim—791

Turbidity

Ultrasonics
Vibrational relaxation times in nitrogen, S. J. Lukasik and J. E. Young—1149

Valence and Chemical Bond
B–Cl distance in boron trichloride, Masao Atoji and William N. Lipscomb—195
Calculation of atomic valence state energies, Audrey L. Companion and Frank O. Ellison
Central-field approach for NH_3 and H_2O, K. E. Banyard and N. H. March—977(L)
Crystal and molecular structure of B_5H_{11}, Richard E. Dickerson, Peter J. Wheatley, Peter A. Howell, and William N. Lipscomb—200
Crystal and molecular structure of diboron tetrachloride, B_2Cl_4, Masao Atoji, Peter J. Wheatley, and William N. Lipscomb—196
Determination of fractional steric inhibition of resonance from σ_R values, Robert W. Taft, Jr., and Helene D. Evans—1427(L)

Electronegativity of radicals. A method of calculation, J. K. Wilmshurst—1129
Electronic energy of LiH and BeH^+, James Miller, R. H. Friedman, R. P. Hurst, and F. A. Matsen—1385
Electronic spectra and structure of the carbonyl group, Jerome W. Sidman—429
Electronic structure of ammonia, A. B. F. Duncan—423
Electronic structure of diborane, Masateshi Yamazaki—1401
F^{19} nuclear magnetic shielding in fluoronaphthalenes, Taro Isobe, Kan Inukai, and Kazuo Ito—1215(L)
FE theory including an elastic σ skeleton. I. Spectra and bond lengths in long polyenes, Heinrich Labhart—957
FE theory including an elastic σ skeleton. II. Changes of molecule dimensions due to optical excitation, Heinrich Labhart—963
Heats of combustion of some peroxides and the heats of formation of acetate, propionate, and butyrate radicals, L. Jaffe, E. J. Prosen, and M. Szwarc—416
Hydrogen bonding in radical reactions. Some remarks on CF_3 radicals, M. Szwarc and J. Smid—421
Hyperconjugation in the semi-empirical ASMO method, Toshifumi Morita—1442(L)
Infrared absorption spectra of nitric acid and its solutions, R. A. Marcus and J. M. Fresco—564
Infrared intensity of the C—H stretching band of chloroform in some halogenated acetones, R. E. Kagarise—827(L)
Infrared spectra of molecules with hydrogen bonds, S. Bratož and D. Hadži—991
Infrared studies of hydrogen bonding of methanol by the matrix isolation technique, Mathias Van Thiel, Edwin D. Becker, and George C. Pimentel—95
Infrared studies of hydrogen bonding of water by the matrix isolation technique, Mathias Van Thiel, Edwin D. Becker, and George C. Pimentel—486
Ionization and dissociation of perchlorylfluoride by electron impact, Vernon H. Dibeler, Robert M. Reese, and D. E. Mann—176
Least squares refinements of $B_{10}H_{14}$, B_5H_{10}, and B_6H_{11}, Emmett B. Moore, Jr., Richard E. Dickerson and William N. Lipscomb—209
Microwave spectrum and molecular structure of bromine trifluoride, D. W. Magnuson—223
Microwave spectrum, structure, dipole moment, and quadrupole coupling constants of formamide, Robert J. Kurland and E. Bright Wilson, Jr.—585
Molecular orbitals for the ground state of the H_3 molecule, Frank E. Harris—812(L)
Molecular structure of tropone, Katsumi Kimura, Satoshi Suzuki, Masao Kimura, and Masaji Kubo—320(L)
Nuclear quadrupole interaction in boron compounds, T. P. Das—1
Nuclear quadrupole resonances in nitrogen compounds. I. Ammonia, deuteroammonia, and trimethylamine, C. T. O'Konski and T. J. Flautt—815(L)
Polynuclear metal carbonyls. III. Infrared analysis of iron tetracarbonyl, Lawrence F. Dahl and R. E. Rundle—323(L)
Pure quadrupole spectrum of cyanuric chloride, Hisao Negita and Sumio Satou—602(L)
Quadrupole coupling constant and molecular structure of CO^{17}, B. Rosenblum and A. H. Nethercot, Jr.—828(L)
Raman and infrared intensities in the vibrational spectra of hydrocarbons. II. The CH vibrations of straight *n*-paraffins, O. Theimer—1041
Raman and infrared spectra of CCl_3CN, Walter F. Edgell and Casper J. Ultee—543
Reciprocal mean as a measure of covalent bond energy, Thomas L. Allen—810(L)
SCF LCAO MO study of Li_2, James E. Faulkner—369
Semilocalized bond orbital treatment of the allyl radical, Jiro Higuchi—825(L)
Semitopological approach to boron-hydride structures, Richard E. Dickerson and William N. Lipscomb—212
Simple molecular orbital theory of conjugation in vinyl bromide and bromobenzene, John A. Howe and J. H. Goldstein—831
Spectra of the alkali halides. II. The infrared spectra of the sodium and potassium halides, RbCl, and CaCl, Stuart A. Rice and William Klemperer—573
Spectra of the paracyclophanes, Lloyd L. Ingraham—1228(L)
Spin density in octocyanomolybdate ($\bar{V}$), S. I. Weissman and Mildred Cohn—1440(L)
Stretching vibrations in condensed systems: especially bonds containing hydrogen, A. M. Benson, Jr., and H. G. Drickamer—1164
Structure of gaseous chloropicrin as determined by electron diffraction, W. M. Barss—1260
Structure of the disordered phase of HCl, G. L. Hiebert and D. F. Hornig—1216(L)
Structure of the interhalogen compounds. II. Iodine heptafluoride at $-110°C$ and at $-145°C$, Robinson D. Burbank and Frank N. Bensey, Jr.—981(L)
Structure of the interhalogen compounds. III. Concluding note on bromide trifluoride, bromine pentafluoride, and iodine pentafluoride, Robinson D. Burbank and Frank N. Bensey, Jr.—982(L)
Study of the wurtzite-type binary compounds. II. Macroscopic theory of the distortion and polarization, F. Keffer and A. M. Portis—675
Superiority of the Poeschl-Teller potential to that of Morse for diatomic molecules, Charles L. Beckel—998
Theoretical electronic spectrum of the allyl system, H. D. Hunt, D. L. Peterson, and W. T. Simpson—20
Use of polar coordinates for molecular wave functions, George S. Handler and James R. Arnold—144
Valence-bond interpretation of electron coupled proton-proton magnetic interactions measured via deuterium substitution, Martin Karplus, D. H. Anderson, T. C. Farrar, and H. S. Gutowsky—597(L)
Variational calculation of the nuclear magnetic shielding of the proton, Bruce R. McGarvey—68
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. II. $KAu(CN)_2$, Llewellyn H. Jones—468
Vibrational spectrum and structure of metal-cyanide complexes in the solid state. III. $Hg(CN)_2$, Llewellyn H. Jones—665

Viscosity

Intermolecular forces and the activation energy for viscous flow in liquids, T. H. S. Higgins and C. J. G. Raw—623

X-Ray Diffraction

B—Cl distance in boron trichloride, Masao Atoji and William N. Lipscomb—195
Bulk density of separated lithium isotopes, D. D. Snyder and D. J. Montgomery—1033
Coefficient of expansion of polonium, R. E. Brocklehurst, J. M. Goode, and L. F. Vassamillet—985(L)
Crystal and molecular structure of B_9H_{15}, Richard E. Dickerson, Peter J. Wheatley, Peter A. Howell, and William N. Lipscomb—200

X-Ray Diffraction (continued)
Crystal and molecular structure of diboron tetrachloride, B_2Cl_4, Masao Atoji, Peter J. Wheatley, and William N. Lipscomb—196
Crystal structure of alpha-plutonium metal, W. H. Zachariasen and Finley Ellinger—811(L)
Lattice constants of separated lithium isotopes, E. J. Covington and D. J. Montgomery—1030
Least squares refinements of $B_{10}H_{14}$, B_4H_{10}, and B_5H_{11}, Emmett B. Moore, Jr., Richard E. Dickerson and William N. Lipscomb—209
Molecular structure of *bis*[cyclopentadienyl molybdenum tricarbonyl], Frank C. Wilson and David P. Shoemaker —809(L)
Preparation and magnetic properties of pyrochlore-type titanates of neodymium and praseodymium, R. C. Vickery and Ardys Klann—1220(L)
Semitopological approach to boron-hydride structures, Richard E. Dickerson and William N. Lipscomb—212
Small angle x-ray scattering from solutions of alkali metals in liquid ammonia, Paul W. Schmidt—23
Structure in ionic solutions. I. G. W. Brady and J. T. Krause—304
Structure of Roussin's black salt, Georg Johansson and William N. Lipscomb—1417(L)
Structure of the interhalogen compounds. II. Iodine heptafluoride at −110°C and at −145°C, Robinson D. Burbank and Frank N. Bensey, Jr.—981(L)
Structure of the interhalogen compounds. III. Concluding note on bromide trifluoride, bromine pentafluoride, and iodine pentafluoride, Robinson D. Burbank and Frank N. Bensey, Jr.—982(L)
